Copies of the agreements reached between the Railway Company and each of the Brotherhoods are attached to this report. They provide in substance as follows:—

1. The engineers will permit the amendment of their schedules with the company to provide that when from any cause it becomes necessary to reduce the engineers on engineers' working lists no reductions will be made on road extra lists when the engineers on such lists are averaging the equivalent of 2,700 miles per month.

2. The rule at present in effect on the Western Region and part of the Central Region of the Canadian National Railways, which may be summarized as the demoted engineers' home station firing rule, (as contained in Article 28 of the Engineers' Schedule for the Western Region), will be extended to the Atlantic Region and the remaining parts of the Central Region and will thus be made uniform throughout the system.

3. Any temporary mileage reductions agreed upon by either of the Brotherhoods on account of unemployment, or other peculiar conditions, will in future be reported to the Company which will co-operate in enforcing their observance.

4. The Company will arrange that locomotive foremen will give to local chairmen of the Brotherhoods a record of mileage made by engineers in order that demotions and promotions can be verified as having been regularly made in accordance with the regulations.

It should be mentioned that it was suggested to the Board during the hearing that a request should be made to the Railway Company to consider the establishment of something in the nature of a guarantee on

certain branch lines where the service is infrequent. The Company's attitude was that this was a matter to be considered when rates of pay were under discussion rather than before the present Board. The Board accordingly referred this question to the representatives of the Company for their sympathetic consideration.

It was stated to the Board that there obtains a custom or unwritten law among railwaymen to the effect that, in the absence of any peculiar unforeseen circumstances requiring its earlier amendment, any agreement entered into between a Railway Company and its employees, or any class of its employees, shall be permitted to continue in operation for at least one year from its date, although expressed to be terminable at any time upon thirty days' notice from one party to the other.

The Board therefore has much pleasure in reporting that the working agreements made on February 3, 1933, between the Canadian National Railways and the Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen respectively constitute a settlement of the dispute submitted to it for investigation.

In conclusion the Board extends its congratulations and expresses its gratitude to the representatives of the two Brotherhoods who appeared before it, and through them to the individual members of the Brotherhoods, for the spirit of friendliness and good-will manifested during the course of the hearing and for the willingness uniformly displayed to submit to personal sacrifices for the benefit of their fellow employees and for the general advantage of the country and its citizens. The Board wishes the public at large to know that in the hard times through which Canada is now passing men representing these two big Brotherhoods have not only eschewed the bitter feelings which would have been engendered if a settlement had not been reached but have made such sacrifices as they can in the public interest in order that the business of the national railway may be carried on with as little friction as possible. The Board also expresses its obligation to the representatives of the Canadian National Railways for their patient and valuable efforts in assisting the Board to arrive at an amicable settlement of the dispute referred to it for investigation and conciliation.

The whole respectfully submitted.

(Sgd.) A. COURTNEY KINGSTONE,  
Chairman,

(Sgd.) W. F. NICKLE,

(Sgd.) F. CURZON DOBELL.

Ottawa, February 17, 1933.

MEMORANDUM OF AGREEMENT made and entered into at the City of Montreal on the 3rd day of February, 1933, between Canadian National Railways (hereinafter called the "Company"), and The Brotherhood of Locomotive Engineers (hereinafter called the "Engineers").

1. Atlantic, Central and Western Region Schedules governing the service of locomotive Engineers with the Company will be amended to provide that when from any cause it becomes necessary to reduce the engineers on Engineers' Working lists no reductions will be made on road extra lists when the Engineers on such lists are averaging the equivalent of 2,700 miles per month.

2. Atlantic and Central Region Schedules will be amended, wherever necessary, to provide as follows:—

When engineers are moved by order of the Company the senior demoted engineers on the seniority district will be used and will be returned to their home station when the Company's service will permit their release.

Demoted engineers may go firing at their home stations unless it can be shown that an engineer their junior has been running at another home station for twelve (12) consecutive months.

An engineer having to move under this rule will be permitted to return to his home station when he stands for work on the engineers' list at that station.

NOTE.—No payment for deadheading will be made under the application of this Rule.

3. Any temporary mileage reductions agreed upon shall be evidenced to the Company by letter or other signed document executed by an authorized official of the Brotherhood concerned, to the end that the Company may co-operate in seeing that reduced mileage limits are observed.

In witness whereof the parties hereto have executed these presents as of the day, month and year first hereinabove written.

MEMORANDUM OF AGREEMENT made and entered into at the City of Montreal on the 3rd day of February, 1933, between Canadian National Railways (hereinafter called the "Company") and The Brotherhood of Locomotive Firemen and Enginemen (hereinafter called the "Firemen").

Whereas an Agreement has been reached between the Company and the Brotherhood of

Locomotive Engineers providing that when from any cause it becomes necessary to reduce the number of engineers on the Engineers' working lists, no reductions will be made on road extra lists when the engineers on such lists are averaging the equivalent of 2,700 miles per month;

Now, therefore, this Agreement witnesseth:

The Firemen's Schedules which have been open for sometime for revision and consolidation and on which understandings have been reached prior to this date on all points except certain of the mileage regulations, with particular regard to the conditions under which demoted engineers may go back firing shall be completed between the parties hereto upon the following bases:—

(a) When engineers are moved by order of the Company the senior demoted engineers on the seniority district will be used and will be returned to their home station when the Company's service will permit their release.

Demoted engineers may go firing at their home stations unless it can be shown that an engineer their junior has been running at another home station for twelve (12) consecutive months.

An engineer having to move under this rule will be permitted to return to his home station when he stands for work on the engineers' list at that station.

NOTE.—No payment for deadheading will be made under the application of this rule.

(b) Any temporary mileage reductions agreed upon shall be evidenced to the Company by letter or other signed document executed by an authorized official of the Brotherhood concerned, to the end that the Company may co-operate in seeing that reduced mileage limits are observed.

(c) The Company will arrange that locomotive foremen will give to local chairmen of the Brotherhoods a record of mileage made by enginemen in order that demotions and promotions can be verified as having been made in accordance with the schedule provisions.

In witness whereof the parties have executed these presents as of the day, month and year first hereinabove written.

## Report of Board in Dispute Between Winnipeg Electric Company and its Conductors, Motormen and Busmen

A unanimous report was received by the Minister of Labour on February 27 from the Board of Conciliation and Investigation established to deal with a dispute between the Winnipeg Electric Company and certain of its employees being conductors, motormen and busmen, members of the Street Railway Employees' Unit, One Big Union. The dispute related to a wage reduction which the Winnipeg Electric Company contemplated putting into effect in the case of operators holding runs on certain routes of the Suburban Rapid Transit Company, operated by the Winnipeg Electric Company. The Board stated in its report that an amicable settlement of the dispute had been reached by the contending parties. The agreement provided that wages of the operators on the suburban routes in question would be continued at the rates in effect prior to the submission of the application for a Board.

The personnel of the Board was as follows: the Hon. Mr. Justice A. K. Dysart, Winnipeg, Manitoba, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. Ernest T. Leech, K.C., and Allan Meikle, both of Winnipeg, nominated by the company and employees, respectively.

The text of the report follows:—

### Report of Board

*IN THE MATTER of the Industrial Disputes Investigation Act and in the matter of the dispute between the Winnipeg Electric Railway Company, and Certain of its Employees, being Motormen, Conductors and Busmen, members of the Street Railway Employees Unit, O.B.U.*

Law Courts Building,  
Winnipeg, Manitoba,  
25th February, 1933.

To the Honourable MINISTER OF LABOUR,  
Ottawa, Canada.

SIR,—The Board of Conciliation and Investigation established by you on the 10th day of January, 1933, under the above mentioned Act to deal with the above dispute has now completed its task and begs leave to submit herewith its unanimous report.

The members of the Board comprised Ernest T. Leech, K.C., and Mr. Allan Meikle, both of Winnipeg (who were appointed on the recommendation of the employers and of the employees respectively) and the Honourable Mr. Justice Dysart, also of Winnipeg, who was appointed by you on the 18th day of January, 1933, as third member and Chairman

after Mr. Leech and Mr. Meikle had failed to agree upon a Chairman.

The first meeting of the Board was held on Saturday, January 21st, for the purpose of preliminary organization and discussion. The possibility of conciliation was then canvassed. The next meeting was devoted exclusively to an attempt to secure settlement, and at a third meeting the representatives of the disputing parties declared definitely that further attempts at conciliation were useless.

The representatives at that and subsequent public sessions were as follows:

For the employers—Messrs. C. H. Dahl, L. Palk and R. R. Knox:

For the employees—Messrs. A. Hume, R. B. Russell and E. Armstrong:

Mr. Thomas Moore was sworn in as registrar of the commission and acted as reporter and secretary.

Throughout the sittings a spirit of courtesy and good feeling characterized the proceedings, and whilst the opposing sides contended with determination and vigour, they nevertheless adhered scrupulously to their professed desire to deal with the matter on purely business and legal grounds.

The contention of the employees briefly stated was that the Winnipeg Electric Company virtually owns as well as operates the suburban line in respect of which the dispute in question arose, and as such owner and operator is compellable to treat with these men respecting their rates of wages. They denied a separate independent corporate existence of the Suburban Rapid Transit Company and contended even if such existence were established the Company was in any event entirely owned and controlled by the Winnipeg Electric Company.

The position taken by the employers was that the Suburban Rapid Transit Company was and is an independent corporation which not only owns the line in question but has the right to operate it subject to termination of the present arrangement existing between that Company and the Winnipeg Company, which arrangement is terminable at will.

Early in the proceedings it became apparent that the enquiry could not be completed without a careful examination into what was after all the underlying fundamental issue involved, namely, whether or not the Suburban Rapid Transit Company had a separate independent existence. With this end in view evidence was called and, after some delays occasioned by the difficulty of locating old records and documents, the hearings were pressed on with such expedition as suited the convenience of all

parties. In the end a large number of documents and records were produced and filed,—in all seventy-two exhibits. These documents had to do with the organization, constitution, contracts, dealing with the said Suburban Rapid Transit Company. Before the evidence was entirely completed, however, further sittings became unnecessary, but it is to be noted that the employer and especially the employees had intimated that several witnesses would be called.

Several meetings were held devoted exclusively to the examination of the records and exhibits. This work consumed considerable time, and from these exhibits it appeared that the Suburban Rapid Transit Company had been incorporated by Acts of the Manitoba Legislature and had, by agreements confirmed by the Legislature in 1903, become the owner of the line and franchises involved. The actual organization of the Company, however, according to the records submitted, were sharply questioned, and with a view of meeting this particular issue the Board requested that the matter be argued by competent counsel. The recommendation was agreed to by both sides, but this also became unnecessary by virtue of settlement hereinafter referred to.

At the last public meeting representatives of the contending parties stated that they had reached a settlement and a memorandum thereof was submitted by the employer's

representatives with the full concurrence of the employees' representatives. That document is as follows:—

"An understanding has been reached between the parties with reference to the dispute before the Board and it has been agreed that there is no necessity for the Board functioning further.

"It has been agreed that without determining the question before the Board the parties will be restored to the position they were in before the application was made."

This settlement renders it unnecessary for the Board to proceed further with its work, and we are therefore glad to report the conclusion of our enquiry and the settlement thus amicably reached.

The Board, however, feels constrained to say although they did not directly effect the settlement in question, they are satisfied that their attitude towards conciliation, and the enquiry itself so far as it had proceeded, had much to do in bringing the parties into final agreement.

All of which is respectfully submitted.

(Sgd.) A. K. DYSART,  
Chairman of the Board.

(Sgd.) ERNEST T. LEECH,  
Member of the Board.

(Sgd.) ALLAN MEIKLE,  
Member of the Board.

February 24, 1933.

## ALBERTA LABOUR DISPUTES ACT

THE following reports from Boards of Conciliation and Investigation appointed under the provisions of the Alberta Labour Disputes Act were published in the *Alberta Gazette*, February 28, 1933. The provisions of the Act were outlined in the *LABOUR GAZETTE*, May, 1926, page 447; June, 1928, page 582. A previous report (*LABOUR GAZETTE*, April, 1932, page 392) dealt with a dispute between the City of Calgary and Local Union No. 255, International Association of Fire Fighters. In the two following cases the city had proposed a reduction of 10 per cent in the wages of the employees concerned, inclusive of a reduction of 4 per cent that had been made last year. The agreements between the employees and the city were outlined in the *LABOUR GAZETTE*, April, 1932, page 452.

### Board of Conciliation Appointed to Inquire into a Dispute Between the City of Calgary and the Calgary Police Protective Union No. 6.

The Board has given consideration to all the factors connected with the dispute, and has heard representations on behalf of the city and the union, and has come to the conclusion that

it is necessary that a reduction in wages should be made. The system adopted by the Calgary School Board, as evidenced in the statement filed with this Board, shows that in connection with employees of the School Board, a sliding scale has been established. The system appeals to this Board as a basis of a fair and equitable adjustment. The Board feels that it is not the amount cut from a man's salary which is all important, but the amount which remains to him after the cut is equally important, and this was a factor in influencing the Board in adopting the graduated scale; accordingly, the following is the finding of the Board in connection with the wage reductions:—

A reduction of five per cent should be made in the wages of police officers earning \$130 a month and less;

A reduction of six per cent should be made in the wages of police officers earning more than \$130 a month and not more than \$140 a month;

A reduction of seven per cent should be made in the wages of police officers earning more than \$140 a month and not more than \$150 a month; and

A reduction of eight per cent should be made in the wages of police officers earning over \$150 a month.

These rates are intended to apply for the year 1933.

(Sgd.) H. W. LUNNEY  
(Chairman).

(Sgd.) S. S. SAVAGE.

(Sgd.) FRED J. WHITE.

### Board of Conciliation Appointed to Inquire into a Dispute Between the City of Calgary and the International Association of Fire Fighters, Local Union No. 255.

The Board has given consideration to all the factors connected with the dispute, and has heard representations on behalf of the city and the local union, and has come to the conclusion that it is necessary that a reduction in wages should be made. The system adopted by the Calgary School Board, as evidenced in the statement filed with this Board, shows that in connection with employees of the School Board, a sliding scale has been established. The system appeals to this Board as a basis of a fair and equitable adjustment. The Board feels that it is not the amount cut from a man's salary which is all important, but the amount which remains to him after the cut is equally important, and

this was a factor in influencing the Board in adopting the graduated scale; accordingly, the following is the finding of the Board in connection with the wage reductions:—

A reduction of five per cent in the case of men earning \$125 a month and less;

A reduction of six per cent in the case of men earning more than \$125 a month and not more than \$140 a month;

A reduction of seven per cent in the case of men earning more than \$140 a month and not more than \$150 a month;

A reduction of eight per cent for all those earning more than \$150 a month.

These rates are intended to apply for the year 1933.

(Sgd.) H. W. LUNNEY  
(Chairman).

(Sgd.) S. S. SAVAGE.

(Sgd.) FRED J. WHITE.

### Delegation of Unemployed Railwaymen Interview Dominion Government

A delegation representing unemployed railway men in Canada, being present and former members of the International Brotherhoods, waited upon the Prime Minister, the Minister of Labour, and other members of the Dominion Government at Ottawa on February 27. Mr. I. E. Weldon, K.C., of Toronto, was present on behalf of the unemployed railwaymen. The delegation claimed that the present situation in the railway industry constituted a "national emergency" and suggested that the Minister of Labour should appoint a Board under the Industrial Disputes Investigation Act to deal with the situation. After a reference to the depressed condition of industry in general the delegation dealt with the conditions of the former employees of the railways. They alleged that approximately half the railwaymen in the running trades in Canada were working overtime, while the other half, or

about 20,000 men, were out of work. To remedy this condition, and to spread existing employment, they asked that, during the period of depression only, the men now employed be placed on short time, on the basis 2,000 miles per month in freight service and its equivalent in passenger service (100 miles constituting a day's work). They claimed that if this reduction in working time were effected the results would be: (1) that about 90 per cent of the firemen and enginemen now unemployed, and a corresponding proportion of conductors and brakemen, would go back to work; (2) some \$6,000,000 would be saved in relief expenditures; (3) temporary jobs now filled by railwaymen would be thrown open to other unemployed men.

The delegation was informed that careful consideration would be given to the case of the unemployed railwaymen.

### STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1933

THE following table shows the number of disputes, workers involved and time loss for February, 1933, as compared with the previous month and the same month a year ago.

| Date           | Number of disputes | Number of employees involved | Time loss in working days |
|----------------|--------------------|------------------------------|---------------------------|
| *Feb. 1933.... | 5                  | 4,450                        | 58,500                    |
| *Jan. 1933.... | 8                  | 622                          | 5,936                     |
| Feb. 1932....  | 18                 | 3,630                        | 10,452                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts

The number of strikes and lockouts recorded as having occurred in February is smaller than that for January, 1933, although the number of workers involved is almost seven times as

are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

large and the time loss incurred ten times as great as that recorded during the previous month; the substantial increase in the latter items being due to the occurrence during February of strikes involving over six hundred coal and copper miners and four thousand women's clothing factory workers with a resulting large time loss. As compared with February, 1932, while a steep decline is recorded in the number of strikes and lockouts occurring, the number of workers involved and the time loss incurred are substantially greater, due also to the strikes of coal miners and clothing workers mentioned above.

Information as to one dispute involving twenty-five workers, which commenced on January 23, 1933, was not received in the Department in time for inclusion in the February issue of LABOUR GAZETTE, but is now recorded as carried over from January, being unterminated at the end of that month. Four disputes commenced during February. Of these five disputes, one terminated during the month, a compromise settlement being reached. At the end of February, therefore, there were in progress four disputes recorded as strikes or lockouts, namely: coal miners, Medicine Hat, Alta., copper miners, etc., Anyox, B.C., women's clothing factory workers, (cloaks and suits), Toronto, Ont., and women's clothing factory workers (cloaks and suits), Montreal, P.Q.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information had been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to six such disputes, namely: photo-engravers, Toronto, Ont., commencing March 23, 1931, one employer; photo-engravers, Toronto and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers, and lithographers, Toronto, Ont., April 15, 1932, one employer. The dispute involving shoe factory workers employed by one firm in Montreal, commencing December 9, 1932, and carried in this list during January and February, 1933, was called off by the union on February 5. The strike of men's clothing factory workers employed by one firm in Montreal, commencing January 3, 1933, and that of women's clothing factory workers employed by one firm in Montreal, commencing January 4, 1933, added

to this list last month, are considered to have lapsed by the end of February and have consequently been removed from the list.

A dispute involving coal miners in one colliery at Princeton, B.C., since the end of November, 1932, the workers seeking to secure a wage increase and recognition of the Mine Workers' Union of Canada, was recorded in the LABOUR GAZETTE for February as lapsed on January 12, 1933, the mine being closed. Work was resumed on February 7, an agreement having been reached between the company and a committee of employees providing for increases in wages of from \$3.60 per day to \$4.00 for labourers, and from \$4.50 per day for miners on day work to \$4.60, and recognition of a committee of employees to deal with disputes and working conditions. The terms of the agreement are given in a special article elsewhere in this issue.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**COAL MINERS, MEDICINE HAT, ALTA.**—This dispute, not reported in the last issue of the LABOUR GAZETTE, commenced on January 23, 1933, when twenty-five coal miners employed in one colliery ceased work as a result of a wage reduction. The representatives of the strikers reported the reduction to be from \$3.50 per day to \$3.03 for day men and from 60 cents per short ton to 60 cents per long ton for contract miners. The employer, however, reported that the wages were between \$3.50 and \$5.50 per eight-hour day and the reduction was seven and one-half per cent, and that the number employed had been reduced. The strikers also complained about unsatisfactory working conditions, transportation to the mine, screens and non-payment for track-laying. An attempt was made to re-open the colliery with workers from the district and the strikers were said to have forcibly prevented the new miners from entering the premises, four of the strikers being arrested for assault. Negotiations between the parties did not result in a settlement, and the employer did not succeed in replacing the strikers, and the strike was, therefore, unterminated at the end of the month.

**COPPER MINERS AND SMELTER WORKERS. ANYOX, B.C.**—On February 1, 1933, some of the employees in the mines, smelter, coke ovens and shops of one company operating at Anyox, B.C., ceased work, demanding in-

creases in wages of 50 cents per day and a twenty per cent decrease in rates for board and rent. Recognition of the Mine Workers' Union of Canada was also demanded, and certain improvements in conditions. About eight hundred men were reported to have been employed, of whom about four hundred were reported to be members of the union and to have ceased work, the others being indirectly affected as the establishment was closed on February 3. The wage scale had been reduced fifty cents per day of eight hours on July 1, 1932, and twice previously within a year. The rates for labourers were \$2.40-\$2.60 per day, muckers \$2.75 per day and miners \$3.25 per day. It is stated that the employees seriously objected to the failure of the company to reduce the rates for board, \$1.10 per day, and the rentals for rooms and houses, also that a recent order that single men should board only in the company boarding houses, and that employees buy all goods in the company stores, was the immediate cause of the strike. It also appears that the local union had been in process of organization since the first wage reduction. The employer stated that the establishment had been

operated at a loss owing to the low price of copper, and that it would be closed permanently if the dispute were prolonged. In a clash between strikers and police on February 3, as a result of picketing by large numbers, several of the police and strikers were injured, and removed to the hospital. A number of the strikers were arrested, and subsequently several of these were committed for trial later at Prince Rupert on charges of assault. About the middle of the month operations were resumed on a small scale by those hitherto indirectly affected and new employees arriving from other localities. A large number of the strikers, being expelled from company property, are reported to have left the locality and picketed the docks at Prince Rupert and Vancouver from which men were leaving to work at Anyox. Clashes with the police occurred at these points also. The company announced a reduction of ten cents per day in the rate for board and a reduction in rentals. At the end of the month operations were being resumed extensively.

COAL MINERS, RIVER HEBERT, N.S.—Coal miners numbering two hundred and twenty-five employed by one company operating two

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

collieries at River Hebert, N.S., on February 3, 1933, ceased work, demanding equal division of employment among the miners in the two collieries. The miners alleged that the terms of settlement of a previous dispute had not been carried out satisfactorily. Negotiations between the parties were carried on with the assistance of the Secretary of Labour for the province of Nova Scotia, and finally, on February 25, 1933, it was arranged that twenty-five of the miners from one colliery would be transferred to the staff of the other and the first colliery would be leased with its equipment to a co-operative company financed by the residents of the district and worked by the remaining miners. Work was resumed on February 27.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), TORONTO, ONT.**—Approximately 2,000 cloak and suit factory workers, members of the International Ladies' Garment Workers' Union, ceased work on February 7, 1933, demanding a forty hour week, the partial restoration of wage cuts instituted by the employers, and to have May 1 as a holiday. An agreement between the employers' association and the International Ladies' Garment Workers' Union, in effect from February 7, 1930, to February 6, 1931, had not been renewed (*LABOUR GAZETTE*, May, 1930, page 580). The establishments affected were picketed by the union, and police protection was secured for those remaining at work. Both parties claimed certain of their members had been injured in connection with picketing but no arrests were reported. From time to time individual firms signed agreements with the union providing for the forty hour week and certain changes in wages, none, however, agree-

ing to the clause as to May 1, several employers making an issue of this point. By the end of the month fifty of the fifty-six establishments affected had resumed work with full staffs but the strike against the others was still in progress. The agreement is noted elsewhere in this issue.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), MONTREAL, P.Q.**—On February 16, 1933, some 1,800 cloak and suit factory workers employed in approximately sixty-five establishments in Montreal ceased work, demanding new agreements between the International Ladies' Garment Workers' Union and the employers. In 1932 the clothing manufacturers had signed an agreement with this union to run for two years (*LABOUR GAZETTE*, May, 1932, page 611). Disputes had arisen as to alleged violations of the agreement and failure to settle these under its provisions. Negotiations were carried on between the parties concerned, but the employers refused to agree to the forty-hour week or to inaugurate unemployment insurance, in accordance with two clauses of the agreement proposed by the union. Clashes between the strikers and workers remaining in the shops occurred, but no arrests were reported. From time to time individual firms signed separate agreements with the union, providing for a rate of \$1.10 per hour for operators, pressers and cutters, 65 cents per hour for finishers, and \$35 per week for tailors. Adjustments in piece-rates were also made, while the union agreed to drop the forty-hour week and unemployment insurance clauses. At the end of the month several of the larger establishments were still involved in the strike. The agreement is noted elsewhere in this issue.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

**T**HE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publications of the vari-

ous countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

The number of disputes beginning in January was 26, and 7 were in effect from the previous month, making a total of 33 disputes in progress during the month, involving 22,800 workers with a time loss of 115,000 working days for the month.

Of the 26 disputes beginning in January, 5 were over proposed reductions in wages, 8 over other wages questions, 5 on questions respecting the employment of particular classes or persons, 6 on questions of working arrangements and 2 on other questions.

Settlements were reached in 24 disputes, of which 4 were in favour of workpeople, 9 in favour of employers, and 11 ended in compromises; in one other dispute, work was resumed pending negotiations.

About 1,200 coal miners near Sunderland were on strike from October 10, 1932, to January 27, 1933, over the question of determining by lot the order of the re-engagement of unemployed workers. Work was resumed on employers' terms and the matter in dispute was later to be negotiated.

No settlement has been reported of the strike of railway employees in Northern Ireland against a further wage reduction of approximately 6 per cent (in addition to the 4 per cent made in 1932), which began January 31 and was reported in the last issue of the LABOUR GAZETTE. Disorders occurred several times when trains were operated by volunteer workers. The dispute extended to the Irish Free State as noted below.

### Irish Free State

The strike of railway employees in Northern Ireland extended to lines of the same company in the Irish Free State, involving about 2,000 workers from January 31.

### United States

The number of disputes beginning in December was 23 and 28 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 4,007. The time loss for the month was 90,869 working days.

A strike of employees of a company manufacturing automobile bodies at Detroit, Michigan, was reported in the last issue of the LABOUR GAZETTE. A strike in the body plant of another automobile plant also at Detroit was reported to have involved 3,000 workers between February 7 and February 13; in addition 6,000 other employees of the company were indirectly affected.

## REVISED REGULATIONS ISSUED BY ALBERTA WORKMEN'S COMPENSATION BOARD

THE Workmen's Compensation Board of Alberta has issued, under authority of the Workmen's Compensation Act, revised regulations which were published in the *Alberta Gazette*, January 31, 1933, and became effective thirty days thereafter, superseding former regulations except where otherwise provided. The principal requirements set forth in the new regulations are summarized below.

Regulations 1 and 2 deal respectively with the repeal of previous regulations and the definition of terms. Regulation 3 requires employers to keep accounts.

Regulation No. 4 deals with assessments and requires an employer to furnish the Board with an estimate of his payroll for the current year and also to notify the Board of any marked increase or decrease. Where he carries on more than one industry a separate report must be made for each. Assessments are to be made upon the gross earnings without any deduction except that provided in the Act for any portion of earnings of a workman in excess of \$2,000. Workmen not receiving a fixed remuneration are to be included at a rate of not more than \$2,000 nor less than \$780 per annum.

Regulations 5-7, inclusive, deal with medical services. Where no plan for medical aid has been approved by the Board, the Board's scale of fees is applicable. Fees for medical aid furnished under the Act may not, however, be more than would be a reasonable charge if the workman himself were paying the same. Hospitals must report to the Board within

twenty-four hours the admission of injured workmen and employers must send quarterly medical aid reports accompanied by a remittance of any amount due. Payment will not be made by the Board covering an operation or treatment which it has not previously authorized, unless there is satisfactory proof of extreme emergency, in which case the physician must notify the Board within twenty-four hours.

Regulation 8 provides that where a workman is employed for purposes other than his employer's trade or business, his wages shall be included on the payroll if his work, if carried on apart from the industry, would come within some other industry within the scope of the Act.

Regulation 9 excludes the following trades and businesses except when carried on in conjunction with an industry otherwise within the Act or when application to be brought in has been approved by the Board: Aeroplanes (including the operation of aerodromes, etc.); automobile schools; commercial travellers representing an industry without the province; dairy farms; operation of "automatic, self-operating" type of freight and passenger elevators; feed chopping mills; production of moving pictures; fire insurance companies; janitors; lightning rod business; mail contractors; motor transportation; photographers; operation of portable saw mills; cutting or manufacture of railway ties, etc.; sawmills and coal mines where labour is paid for other-

wide than in cash; service stations; stock yards; and the sale of used cars.

Regulation 10 provides that employers or members of their families brought within the scope of the Act shall be assessed on a basis of not less than \$1,200, nor more than \$2,000 per annum.

Regulation 11 embodies the old regulations 14 and 15 (LABOUR GAZETTE, September, 1928, p. 974) and a revision of regulation 19 (LABOUR GAZETTE, June, 1932, p. 671), with the addition of boarding houses and automobile salesmen. Also included in regulation 11 are two new paragraphs, (c) and (e), as follows:—

(c) Creameries shall include dairies, but no creamery or dairy shall be deemed to be such within the meaning of the Act, except those that purchase milk and cream or either or both and mechanically treat and bottle and thereafter sell the same, by daily distribution by horse or motor vehicles; and provided that such industry shall not in any event include dairy farms.

(e) It is hereby declared that the industry of fishing shall include the care, preparation and packing of fish, as well as the operation of the boats, vessels and other craft used in the catching or collecting of same; also the operation of storage and ice-house plants and premises used for or in connection with the care, preparation, storage or packing of fish so caught; as well as the transportation to and from such plants and premises; but shall not include or apply to persons engaged in the catching of fish disposed of, or for the purpose of disposing of them, to others engaged in the industry of fishing as herein defined.

Regulation 12 defines the business of teaming or cartage to include trucking and the hauling for hire by means of any vehicle of any commodity or material, but excludes it from the operation of the Act except where it consists of a regularly established business employing two or more workmen; where it is conducted in conjunction with some other industry to which the Act applies; or where a teamster or driver furnishes the team, conveyance, etc., in the driving of which he is employed and the relationship of master and servant exists between him and his employer. Where remuneration paid a teamster includes payment for the team, one-half the amount may be deducted as payment for the team, subject to adjustments in special cases, but for purposes of assessment the wages of the teamster shall not be deemed to be less than \$2.50 per day. If the employee drives his own motor truck and is paid on a cubic yard-mile or hourly or daily basis, his wage shall be deemed to be \$3.75 per day.

Regulation No. 13 reads as follows:—

Where in any calendar year the amount chargeable to the account of any employer is in excess of a sum equal to the amount of the ordinary assessment against such employer for the current calendar year increased by five per centum, the Board shall assess and levy upon such employer for that year, in addition to the ordinary assessment, an amount equal to the

difference between the amount of the ordinary assessment for that year and the amount chargeable to his account for that year up to, but not more than, thirty-three and one-third per centum; provided that the additional charge herein provided for shall not be imposed in respect of any industry unless and until a period of three years has elapsed since the establishment thereof as an industry within the scope of the Act.

Regulation No. 14 requires an employer whose principal place of business is without the province and who carries on operations in Alberta to forward to the Board on the completion of operations or on or before January 20, in each year, following the year in which he is engaged in operations, all books, records and other information necessary for the making of the assessment.

Regulation No. 15 provides that a contractor or sub-contractor who personally performs the whole of the work may be deemed to be a workman, provided the relationship of master and servant exists between him and his employer. When such person employs one or more workmen in the performance of the work, he is deemed to be an employer and not a workman.

Regulation No. 16 declares that while the regulations are intended to set forth the policy of the Board, it may use its discretion as to their application.

Regulation No. 17 continues in force certain existing regulations dealing with accident prevention, first-aid kits, accident prevention committees, and also those governing gas and oil wells, and buildings and excavations. (LABOUR GAZETTE, September, 1928, p. 974.) Certain other regulations are adopted and declared to be regulations of the Workmen's Compensation Board, viz: Regulations approved by the Bureau of Labour governing grain elevators and power transmission machinery, and those issued under the Factories Act dealing with elevators and hoists, under the Boilers Act dealing with refrigerating plants, and under the Theatres Act dealing with theatres and entertainment halls.

The Workmen's Compensation Board has also amended the Regulations under the Electrical Protection Act. The amendments were published in the *Alberta Gazette* of February 28, 1933, and deal with work on high voltage, pole steps, methods of grounding and the furnishing of safety devices and first-aid kit. Regulation 81 which dealt with safety measures in grain elevators is replaced by new provisions, which cover also other places where inflammable dust is present, such as premises where flour and feed milling, starch, sugar and cocoa manufacture, the pulverizing of coal, etc., are carried on and also where such processes are present in sufficient quantity to create a hazard.

## MOTHERS' ALLOWANCES AND CHILD PROTECTION IN SASKATCHEWAN

THE annual report of the Bureau of Child Protection, of Saskatchewan, recently received, contains the reports of the Commission of Child Welfare and the Superintendent of Old Age Pensions for the period ended April 30, 1932, operating under the provisions of the Child Welfare Act and the Old Age Pensions Act respectively.

The Commissioner of Child Welfare points out that the Bureau of Child Protection, in addition to its numerous other duties, has to carry on the work usually performed by a large children's aid society. This part of its activity is reviewed under three main subdivisions—child protection, child caring and child placing. Under the first division is included the work of investigation and dealing with complaints, approximately 2,000 children being involved in the number of cases handled each year. As a last resort, children have to be committed as wards of the commissioner, and during the year under review there were 156 such commitments. Under the second category—that of child caring—the movement in recent years has been away from institutional to paid foster home care. At the end of the fiscal year, there were in Saskatchewan 838 wards in free or wage foster homes, 84 in paid foster homes and 29 in shelters.

The statistics indicate that up to the present date, 4,101 children have been made permanent wards of the Province, either by surrender by the parents or through court orders. This number does not include those made wards of children's aid societies. The total number of wards at the end of the fiscal year (including those of Regina, Saskatoon, and Moose Jaw Children's Aid Societies) was 1,365; the number of wards discharged during the year via legal adoptions, marriage, attainment of age, etc., was 365; wards in institutions and boarding houses numbered 180; and wards committed during the year (including the 156 wards of the commissioner) totalled 206.

Other branches of departmental work dealt with juvenile delinquency, mental defectives, children of unmarried parents, blind and deaf children, and the activities of children's aid societies.

*Mothers' Allowances.*—The administration of mothers' allowances in Saskatchewan is also under the Bureau of Child Protection. Under the provisions of the Mothers' Allowance Act of 1922 (now incorporated with the Child Welfare Act) the Legislature makes an annual grant, expended in monthly payments, in order to provide support, or partial support,

for the dependent children under sixteen years of any woman who by reason of poverty is unable to take proper care of her child or children.

According to the statistics, the number of mothers receiving assistance continued to increase, the number as at April 30, 1931, being 1,633, while one year later, at the close of the period under review, it was 1,691. This increase was attributed largely to economic conditions. However, there was a considerable decrease in the expenditure for the support of children. At the beginning of the fiscal year this stood at \$48,325, while on April 30, 1932, this amount had decreased to \$33,958. It was explained that this decrease was due to a decision that the allowance be paid according to the number of children the mother had to support and "also bearing in mind that the primary responsibility for the care of the sick and indigent rested on the municipality in which the applicant resided, and the Mothers' Allowance paid by the Provincial Government was only extended to supplement any assistance granted by the municipal authorities and that it was not the intention of the Act to place the entire burden on the ratepayers of the province." It was also considered that though the amount of the allowance might seem small, yet with the relief that was being paid in actual cash as well as clothing and foodstuffs, the grant was sufficient to keep the children in comparative comfort.

A tabular summary of the year's activity shows the number of widows, dependents, guardians, and families receiving allowances as well as the average amount paid per child. The statistics for April, 1932, indicated the following situation as regards mothers' allowances; number of widows, 1,691; number of dependents, 554; number of guardians, 67; number of deserted wives, 60; total families, 2,372; children under sixteen years, 6,431; amount paid \$33,958; average paid per recipient, \$14.316; average paid per child, \$5.280. During the year ending April 30, 1932, the amount paid in allowances was \$483,618 as compared with disbursements of \$544,250 in the previous year.

The report of the Old Age Pensions Branch reviews the administration of the Act during the year ending April 30, 1932. The information as to old age pensions in Saskatchewan as well as throughout Canada is given in the LABOUR GAZETTE in regular quarterly reports (February, 1933, page 159, etc.)

## Minimum Wages for Female Employees in Manitoba

The following order of the Manitoba Minimum Wage Board, to take effect on February 28, 1933, was published in the *Manitoba Gazette*, January 28, 1933, providing for a 10 per cent reduction, for a period of one year, in the existing rates under the various orders of the Board. (The minimum wage rates for female employees in the various industries covered by orders of the Boards in the several provinces were summarized in Appendix A of the bulletin: "Wages and Hours of Labour in Canada, 1930, 1931 and 1932," which was issued as a supplement to the *LABOUR GAZETTE*, January, 1933.)

The text of the new order is as follows:—

Public notice is hereby given, that the Minimum Wage Board at its meeting held on Friday, January 20, 1933, ruled that there shall be a ten per centum (10%) reduction in the scale of minimum wages for female employees in the Province of Manitoba for one year, the said reduction to take effect one month from the date of the publication of this notice in the *Manitoba Gazette*.

Dated at Winnipeg, this 28th day of January, A.D. 1933.

GEO. N. JACKSON,

Chairman, Minimum Wage Board,  
Winnipeg, Man.

## Legislative Program of Trades and Labour Congress in British Columbia

The British Columbia Executive of the Trades and Labour Congress recently submitted their suggested program of legislation to the Premier, Hon. S. F. Tolmie, and ministers of the British Columbia government. Pointing out that the unemployment problem was now a permanent one, they particularly emphasized the absolute necessity of positive reduction in the hours of work. "We are satisfied," they stated, "that many thousands of persons now unemployed will not be re-established in the province of British Columbia unless the hours of labour are greatly reduced. At the same time it is impossible to have a recovery of business unless our people have a purchasing power in balance with our productive ability."

The delegation urged the enactment of legislation limiting the hours of work to six per day with a five-day week. At the same time, maintenance of purchasing power was regarded as essential, and in this respect the government was asked "to take a lead by restoring the salary reductions put into effect among its own employees."

The memorandum condemned the efforts put forward for economies and retrenchment as aggravating the depression, and urged a substantial increase in the allowance for relief to those denied the opportunity of earning a livelihood.

Unemployment insurance on a national basis was recommended as the most practical way of dealing with the unemployment question. The British North America Act should be amended so as to make such action possible.

A program of public works was favoured in order that "the number forced to rely on public authorities for food, clothing and shelter be reduced to a minimum."

Dealing with workmen's compensation, it was requested that "the rate of compensation be based on the rate of wages being paid to the workmen at the time of the injury, and not on average earnings with long unemployed periods included in the average. Also that the rate of compensation be increased to 75 per cent."

Other recommendations included a protest against curtailment of educational grants; amending the income tax by lessening the amount on smaller incomes and placing the burden on those best able to afford it; enactment of moratorium legislation; a health insurance act, and liability insurance for automobile owners.

By arrangement between the University of Queensland and the State Government a plan has been formulated for placing at the disposal of the Government 80 acres of agricultural land, together with a grazing area and timber area. This land is to be used for training town boys in rural pursuits. The Public Service Commissioner, in commenting on the scheme, has pointed out that there is need of a preparatory agricultural school to which urban boys who wish to take up agriculture could be directed when leaving the elementary school at the age of 13.

The Speech from the Throne at the opening of the Prince Edward Legislature on March 1 stated that the payment of pensions to aged persons had been carefully investigated during the recess, and that arrangements were being completed for commencing payments as from June 1, 1933.

## CANADIAN NATIONAL SAFETY LEAGUE

Annual Reports of Central Body and Associated Provincial Leagues  
for 1932

THE fourteenth annual report of the Canadian National Safety League, recently received, details the activities of not only the main organization but also of its provincial affiliates, during the year 1932. In the promotion of safety education the central body acts as a co-ordinating agency for the following provincial leagues: the Ontario Safety League, the Province of Quebec Safety League, the Maritimes Safety League, the British Columbia Safety League, the Manitoba Safety League, and the Saskatchewan Safety League. In addition, memberships and affiliations are maintained in such organizations as the Canadian Good Roads Association, the International Association of Industrial Accident Boards and Commissions, the National Safety Council, the St. Louis Safety Council, the Illuminating Engineering Society, and the Automobile Club of Southern California. During the year, the head office supplied to the members of the League a service of industrial, special and traffic bulletins. Distribution of school bulletins was also made in response to calls from outlying districts. In all, a total of 10,000 bulletins and 5,000 safety calendars were distributed in 1932.

*Ontario Safety League.*—The annual report of the Ontario organization indicates that during 1932 there was a reduction in fatalities of 202 from 25 different hazards, while there was an increase of 110 from 12 other causes, leaving a total decrease over all of 92.

School work was again emphasized in the year's operations. A total of 603 safety lectures, illustrated by films and lantern slides were given to 215,050 pupils in 404 schools in 40 different places throughout the province. In this program the league received the active co-operation of the police departments, school boards, principals and teachers in the towns visited. Other phases of this work included the organization of school safety patrols, and the holding of a prize essay contest on highway accident prevention.

In addition to giving special attention to aquatic hazards, general safety work was carried on with industrial plants, electric railways, truck owners, associate and individual members, members of the safe drivers' club and the public in general. This work was largely by means of safety educational bulletins, broadcasting, meetings and safety calendars.

Approximately 400,000 cards to motorists and pedestrians containing 26 rules for safe and sane driving and safe walking were printed,

and by the courtesy of the Motor Vehicles Branch of the Department of Streets and Highways, were enclosed for distribution with the 1933 license plates. The Safe Drivers' Club of the League carried on the usual work of reporting cases of careless or reckless driving, disregard of highway traffic rules and discourtesy on the road. All drivers in these cases received a letter from the League drawing their attention to the particular article in the traffic act they are disregarding, or the hazard they create for themselves and others.

The distribution of safety literature was as follows: School bulletins, 138,400; industrial bulletins, 45,600; special bulletins, 52,400; traffic bulletins, 57,600; street car cards, 2,060; cards to motorists and pedestrians, 400,000; reports, etc., 10,000; circulars, circular letters and cards, 11,000; safety calendars, 12,200.

An analysis of the accident statistics for the province shows that the number of fatal accidents for 1932 totalled 1,665 and the number of non-fatal accidents was 15,122, as compared with 1,757 fatal and 16,638 non-fatal accidents in the previous year. As in the past few years the same causes which produced the greatest frequency of fatal accidents were again operative in the same relative positions, viz., first automotive vehicles; second, drowning; third, falls; fourth, railroads; fifth, burns and scalds. The comparisons of fatalities under these five classifications during 1931 and 1932 are as follows: Motor vehicles, 571 in 1931 and 502 in 1932; drownings, 341 in 1931 and 349 in 1932; falls, 204 in 1931 and 179 in 1932; railroads, 86 in 1931 and 83 in 1932; burns-scalds, 61 in 1931 and 69 in 1932.

*Province of Quebec Safety League.*—The report of the Quebec Provincial affiliate referred to the re-incorporation of the industrial section of the League into the Quebec Association for the Prevention of Industrial Accidents, thereby making it possible to concentrate upon public safety as well as safety of the streets and highways.

Reference is made to the development of the inter-fleet contest among firms throughout the province, and in this respect the report states: "Slowly but surely we have inculcated within the minds of executives and operators the true value of safety drivers—drivers who can operate, without accident, their trucks under all circumstances. From a mere handful we have increased the number of entrants until to-day we have seventy-seven firms, all keenly interested in the competition. These firms represent 5,070 drivers who operate on

an average of over 650,000 hours each month. But the outstanding point of all is, we have reduced the accident frequency by 59 per cent, a truly remarkable record. During the past year twenty-one firms have operated without a single accident while 450 chauffeurs have been awarded the 12 months' no-accident Chauffeur Medallions for operating one year free from accident."

One of the latest successes of the League was the organization of a federation of School Safety Brigadiers with active units in the cities of Montreal and Quebec. In the latter city there are five schools with 95 scholars acting as safety brigadiers, while in Montreal there are 85 schools, with over 1,300 safety brigadiers. These brigadiers are not permitted to direct vehicular traffic, but are charged with the responsibility of controlling the student body in crossing streets and to signal approaching motorists.

The League makes it a duty to honour those who have risked their lives in the safety of others, and the report gives honourable mention to those who have been decorated for

meritorious acts. The report touches on the special safety courses in technical schools in order to make young students "safety minded" when entering upon industrial occupations.

*Manitoba Safety League.*—The report of the Manitoba organization indicated that the total number of accidents during the year ended April 30, 1932, was 3,018 including 14 fatalities. In accident prevention work, the League had employed noon-hour safety talks in industrial plants as well as the bi-monthly distribution of safety bulletins. Seven first aid classes (five for men and two for women) were organized during the year, and these were attended by 160 persons, 115 of whom passed the qualifying examinations. Traffic hazards were combatted in a campaign that featured an "accident prevention week."

No reports were included in the general annual review from the Maritime or the British Columbia Safety Leagues, while Saskatchewan reported on activities in connection with the prevention of highway accidents.

## CANADIAN CONSTRUCTION ASSOCIATION

### Proceedings at Fifteenth Annual Convention

THE fifteenth annual convention of the Canadian Construction Association was held at Windsor on January 24, 25 and 26, the delegates being representative of all departments of the industry from coast to coast.

In his annual address the President, Mr. C. J. A. Cook, dealt with problems directly affecting the construction industry, including the question of licensing of contractors, the development of a standard form of tender, unemployment insurance and hours of labour. With regard to the last subject the president said: "In any building the question of hours of labour has to be considered, and I think the time has arrived when we must take this under advisement. Are the four hours worked on Saturday economical and would the five-day week of forty hours mean extending the completion date and increasing the cost? Sometimes it seems to me it would be more economical and better results would be achieved if the time for completion was extended."

The report of the general manager, Mr. J. Clark Reilly, reviewed the year's activities. The section concerning labour relations states: "There seems, however, to be a growing uncertainty in regard to wage rates and agreements. We collected information from

local associations in the various centres, about May last, but the rates which were supposed to be 'official' in many places were so different from those actually being paid that we decided not to publish any schedule. Recent correspondence with some secretaries in response to special requests for information as to the likely rates for 1933 reveals the fact that there is still uncertainty as to rates of pay. There is also an evident unwillingness to enter into agreements 'so long as labour is willing to work for people outside the employers' group at less rates.' The entire question of wages and agreements in our industry deserves careful study."

With reference to unemployment insurance, the report states: "We have been giving very careful consideration in our various meetings to the different proposals brought to our attention looking forward to legislation providing insurance against unemployment. Our industry, both from the seasonal nature of our occupation and the methods of employment which have grown up in it, fairly bristles with difficulties. Yet it is very evident that unless we are able to present a workable solution, we shall be faced with rapidly growing demand on the part of organized labour for some form of 'contributory' insurance, and the more radical

groups of unemployed are already demanding in no uncertain terms 'non-contributory' unemployment insurance."

On the subject of apprenticeship, the general manager pointed out that the past year had been unfavourable for apprentice training with so little work to do and so many skilled men unemployed. "We have built up a strong argument," he said, "over a number of years, of the need for skilled workmen in our industry. We have shown that immigration was not the answer, and trained boys under an adequate scheme would solve the problem. Present conditions are liable to undermine the results of all this hard work. If our industry becomes active within the next five years, how many of the skilled men will be available in the trades? Are we to look to the technocrats for our solution, or ought we not to continue our efforts to solve our own difficulties?" The action of the convention concerning apprenticeship was that "the present Ontario Apprenticeship Act be maintained regardless of conditions."

Three resolutions were before the convention regarding the standard form of tender,

and it was decided to leave the question to a committee for further consideration.

As regards moratorium extensions, it was decided to request the incoming executive to assist other organizations in having the action of the governments clarified.

The principle of licensing of contractors by provincial governments was endorsed by all sections represented at the convention.

The election of officers and sectional representatives resulted as follows:—

President, Charles J. A. Cook, Montreal.

Vice-president, W. H. Yates, Hamilton.

Eastern vice-president, W. L. Reford Stewart, Sherbrooke.

Western vice-presidents, Col. W. W. Foster, Vancouver, and Cecil H. Gunn, Winnipeg.

Honorary secretary, F. G. Rutley, Montreal.

Honorary treasurer, Geo. Oakley, Toronto.

General contractors' representative, Joseph Wilde, Toronto.

Trade contractors' representative, A. K. Purdy, Toronto.

Manufacturing and supply section representative, E. G. Montgomery, Montreal.

Chairman of membership and finance committee, V. C. Moynes, Toronto.

## NATIONAL CONSTRUCTION COUNCIL OF CANADA

### New Organization to Stimulate Building Activities in the Dominion

A CONFERENCE of various bodies interested in the construction industry was held at Toronto early in February, when a new organization was formed under the title of the National Construction Council, for the purpose of devising means of unifying and stabilizing the construction industry and improving its public relations. The following account of the origin, objects and organization of the new association is based upon a report which appeared in the *Contract Record and Engineering Review*, February 15.

Some months before the conference met the Royal Architectural Institute of Canada and the Canadian Construction Association had formed a "National Committee on Construction Recovery" which was later enlarged so as to include representatives of the Engineering Institute of Canada and the Canadian Manufacturers' Association. Representatives of thirteen other national organizations were then included in the Committee and were present at the conference, as follows: The Trades and Labour Congress of Canada, Canadian Chamber of Commerce, Canadian Lumbermen's Association, Brick Manufacturers' Association, Canadian Council of International

Society of Painters and Decorators, Canadian Founders and Metal Trades Association, Canadian Hardwood Bureau, Canadian Automatic Sprinkler Association, Contracting Plasterers' Association of Canada, Structural Clay Tile Association, Canadian Paint, Oil and Varnish Association, Canadian Institute of Steel Construction, and Canadian Ceramic Society.

### Objectives of the Council

The objectives before the National Construction Council were enumerated at the organizing conference as follows:—

(1) To unify the construction industry, that it may plan its future and present its aspirations as an industrial unit.

(2) To stabilize the industry, eliminate waste, improve its ability to serve the public, develop its structural and economic plans, minimize unemployment, and consolidate parallel endeavours.

(3) To enable leaders of national bodies to automatically confer together for mutual benefit and industrial progress.

(4) To furnish an industrial tribunal to promote justice, encourage constructive measures

for or within the industry, and courageously oppose destructive measures against or without the industry.

(5) To promote fair professional ethics and business practices.

(6) To promote higher standards of living, meet competition of other industries, support timely movements for proper and efficient public works, and encourage sound financing and investments in construction projects.

(7) To promote better public relations.

(8) To collect and disseminate such data and information to the affiliated bodies or the public as may be deemed necessary or advisable from time to time.

(9) To foster and co-ordinate industrial and scientific research in the construction industry and its component parts.

(10) To provide adequate facilities to accomplish these objects, and such other objectives as the organization committee may consider advisable.

### Stimulation of Construction

The conference adopted the following report of the committee on stimulation of construction activity:—

*Size of Industry.*—According to figures supplied by Mr. Coats of the Dominion Bureau of Statistics, the construction industry in Canada in the year 1929, when the industry was at its peak, employed directly 310,000 workers, and indirectly in the factories another 70,000, or a total of 380,000 workers. On the usual basis of computation, these figures show that the construction industry supports approximately one-eighth of the entire population of Canada in normal or prosperous times.

*Rate of Production.*—In the last two months of 1932, taking the 1929 figures as 100 per cent, the construction industry was operating at about 10 per cent of its capacity. According to the latest figures for January of this year, this figure of 10 per cent is diminishing rapidly and is quickly approaching the zero point.

*Public Bodies Without Funds.*—Practically every municipality, as well as provincial and Dominion governments, have indicated that in the year 1933 no capital expenditures will take place. This policy of retrenchment we have so far never criticized severely, but we are to-day firmly convinced that this continuation will only lead to disaster.

*Construction Men in Relief Line.*—We would point out that there are more workers to-day in the relief line all over Canada coming from the construction industry than from any other industry in the country.

*Nature of Direct Relief.*—It is hardly necessary for us to point out the most obvious dis-

advantages in the policy of direct relief. The lowering of the morale of our citizens is perhaps the most serious objection. It is wasteful of the source of our own wealth and our own power. The dissipation of capital without any return is also unavoidable. The third point, which is perhaps not so obvious, is very apparent to the construction industry, namely, that there is a tendency to segregate the good workmen from the poorer workmen, keeping only the highest skilled and most intelligent type employed without rotation, and placing in the ranks of the unemployed the poorer type, although undoubtedly there are great numbers of high-class and intelligent workmen in the ranks of the unemployed. From a social point of view, this we consider to be a very dangerous condition. The fourth point we wish to emphasize is the mounting mill rate in all municipalities caused by the cost of direct relief, coupled with the fact that as the relief line grows, the ability of the municipalities to collect taxes diminishes.

*Figures on Cost of Relief.*—The figures published on the cost of relief for the year 1932 are very startling indeed, but even more startling are the reports which are being made public from day to day since the first of January this year. We take as examples the cities of Toronto and Hamilton. In Toronto during the month of November last year, the increase in city taxation due to direct relief was increasing at the rate of one-eighth of a mill per month, or one and one-half mills per annum. In the month of December there were 22,555 families on relief in Toronto—3,000 more than the previous month. In the month of January there were 24,244 families, an increase of 1,689 over December, and the relief line is growing in Toronto at the rate of 375 families per week at the present moment.

In the city of Hamilton in the month of November the tax rate was increasing at the rate of one-third of a mill per month, or four mills per annum. At the present moment in the city of Hamilton, direct relief is being handed out at the rate of six mills per annum. This refers to the city's share of relief only. These figures clearly indicate that we are heading into a critical situation. We also wish to point out the alarming increase in the army of unemployed which may readily become an uncontrollable factor. We respectfully suggest that some alternative, no matter whether it have aspects of serious concern or not, must be considered.

*Construction Program as an Alternative.*—This subject must be considered under two distinct headings, namely, our present emergent domestic situation and the broader international situation. Dealing first of all with the

international situation, this industry is thoroughly convinced that a general international return to prosperity can only ultimately be brought about by an extensive constructional program by every country in the world, and it is our hope that the forthcoming international economic conference will so decide. We note with considerable satisfaction that this subject has been included in the agenda for the forthcoming monetary and economic conference on the recommendation of the council of the League of Nations. We are, however, more concerned at the present moment with the emergent domestic problem, and we suggest as an alternative plan to reduce direct relief a construction program, the outline of which follows:—

*Diffusion of the Construction Dollar.*—We have already pointed out the magnitude of the construction industry and its importance in the Dominion, and we wish to augment the weight of this argument by calling attention to the well-known fact that, compared with all other industries, a dollar spent in the construction industry is diffused into more channels of industry than any other type of dollar spent. In previous years figures have been submitted to the Dominion government showing beyond doubt that for every dollar spent in the construction industry, eighty-two cents finds its way into pay envelopes, either directly on the construction job, or indirectly in the factories manufacturing construction materials, and the transportation companies which carry them to the works. Only the balance of eighteen cents represents the true material costs and the cost of financing and other overhead.

*Formation of a National Construction Council.*—We believe that in the past the construction industry has never been in a position to talk to public bodies for the reason that heretofore there never has been formed a council which would represent all the interests which comprise the entire industry. This conference has now formed such a council, which council has available a mass of detailed information concerning the construction industry, and it is our hope that the Dominion government will avail itself of the services of this council when attempting to solve the future problems which lie so heavily before it.

*Construction Finance Corporation.*—This conference recognizes very acutely the great difficulties in providing funds for construction purposes of any kind, but we are firmly convinced that there is no alternative but for such funds to be procured. We suggest, therefore, that a Construction Finance Corporation be formed under the auspices of the Dominion Government for the purpose of passing on the merits or necessity of construction projects

advanced and assisting them by banking services or direct financing, and that certain classes of construction work be carried out under the following conditions:—

Public statements have emanated from the Dominion government in the past in connection with relief work which was carried on in the years 1930 and 1931 that the costs were extravagantly high. We wish to point out that one important reason why these costs were found to be so high was that the work was not done as suggested below.

We recommend that the most modern methods available be used on all construction work.

We recommend that the work be placed under keenest of competitive conditions, that architects and engineers in private practice be employed to plan and supervise work of construction, and further that only *bona fide* contracting companies be permitted to tender on such work to the exclusion of municipal and city engineers and other authorities.

We further recommend that a definite scheme of rotation of labour consistent with economy be instituted in order to give employment to a maximum number of men. We would emphasize the necessity of giving householders preference on work of this kind.

We also recommend that the prevailing rate of wages be paid on all such work.

Further, it is very necessary that a comprehensive survey be made from one end of the country to the other to find out what new types of buildings and other improvements are necessary and their relative importance in the suggested program.

*Types of Work Suggested.*—Realizing the great necessity of obviating any unnecessary duplication of buildings and other construction units, the following types of work are recommended as not involving such duplication:—

(a) Self-liquidating works the selection of which should be in the hands of an impartial body with no political affiliations. We mention such obvious suggestions as cold storage plants, water works and filtration plants, hospitalization and low-cost housing.

(b) Public works to replace rented premises where the elimination of rentals being paid by the Dominion government would justify a capital expenditure. In certain parts of the country we have post offices and customs houses in this category.

(c) The replacement of buildings and other works which are obviously suffering from acute obsolescence and depreciation and which must be replaced within a few years under any conditions. This group would also include government buildings where the necessity of additions is very pressing at the moment. Under

this group we suggest penitentiaries, county jails, provincial hospitals, welfare buildings, and registry offices.

(d) We should suggest that serious consideration be given to the re-establishing of the grade crossing fund and subsequent elimination of many dangerous grade crossings.

(e) Our records show that there are in the province of Ontario no less than 114 municipalities with populations of 1,000 or over which are in real need of sewage systems, but which through lack of encouragement or assistance are unable to proceed. Such sewage systems will come along in the natural course of events in a few years in many cases, and this work could well be proceeded with at the present moment under these pressing conditions and at very low cost.

*Comparison of Two Alternatives.*—This industry is under no illusions as to the almost insuperable difficulties concerning the increasing of Canada's national debt. At the present moment we are increasing not only the national debt, but every municipal debt at a most alarming pace without anything on the other side of the ledger. If a construction program such as has been suggested is carried out, and the financing done in Canada and the money spent in Canada, we will at least have the following factors, all tending towards the diminution of the capital cost involved. First of all, the cost of direct relief will greatly diminish, and this diminution will be felt at once. In the second place, the starting up of such activity as has been suggested will have a tendency to increase commodity prices throughout the country or at least will have the tendency to stop any further decline. This will have its effect in causing the existing load of national debt to be less onerous. In the third place, by giving our citizens work we will increase the ability of the taxpayers to meet the heavy tax burden which is at present bearing on their shoulders.

In conclusion, let us repeat again that we know the financing of such projects as we have outlined presents serious difficulties, but we as an industry are sitting very close to the other side of the picture and we see a far greater danger and a rapidly growing danger in continuing the policy of direct relief and doing nothing of a constructive nature.

### Financial Methods

As regards methods of financing construction and general monetary problems the following resolutions were adopted:—

1. Resolved that it is the opinion of this conference that a reduction in interest rates would substantially encourage the circulation of money through business channels.

2. Resolved that improvement could be made in the present methods of financing construction and we suggest that the National Construction Council study this problem giving special consideration to: (a) Methods of financing home construction; (b) more strict regulation of the issuance of building bonds; (c) provision for rediscount facilities to mortgage organizations.

3. Resolved that this conference recognizes the responsibility of this industry to initiate steps to overcome existing difficulties in respect to the financing of new construction and that it recommends to the National Construction Council the making of a survey with respect to resources within the industry for the financing of new construction, the most efficient manner in which these resources can be applied, and the extent to which the co-operation of governments can be secured to give effect to such measures.

### Solving Unemployment

On the subject of unemployment a resolution embodying seven clauses was adopted. It read as follows:—

(a) Whereas direct relief is destructive of the morale of the recipient, uneconomic in that it is wasteful of the source of our real wealth (our man power), and a grievous burden to the taxpayer, the conference favours work for the unemployed in preference to direct relief.

(b) We believe that the principle of contributory unemployment insurance or the principle of some savings plan as a necessary means to maintain the equilibrium of the wage earner's spending power should be earnestly studied by the National Construction Council. It is recognized that pending the recovery in business or the absorption of the unemployed in industry and business, direct relief will be necessary.

(c) Whereas the number of people in Canada employed in the construction industry and the allied manufacturing industries approximated 400,000 in 1929 when contracts awarded totalled \$576,651,800, and whereas the contracts awarded during 1932 totalled only \$132,872,400, only 23 per cent of the 1929 totals, it is apparent that a continuance of the fall in prices throughout the year 1933 will reduce construction work to negligible proportions and will consequently tend to throw out of employment almost all those engaged in this industry. It is the opinion of the conference that new construction work can no longer be deferred in this country without courting national disaster, and that national policy should be directed in such a way as to tend to give an impetus towards a rise in prices.

(d) The conference endorses the proposal with reference to the altering of the budgeting dates of governments, federal, provincial and municipal, to the fall of the year in order that seasonal inactivity in the industry may be mitigated by the promotion of government and other building operations during the winter months.

(e) The conference is in agreement with the principle that a distribution of available work can be facilitated by the shortening of working hours.

(f) Whereas the future physical development of the country will be reflected almost entirely by the work of the construction industry in its various capacities, and whereas normally twelve per cent of the population is dependent upon this industry for a living, it is the opinion of the conference that the industry should always be justified in studying its problems with a view to influencing national policy.

(g) Whereas the fluctuations in business which bring about periodic recurring storms of deflation also result in the unemployment of ever-increasing percentages of the population,

this recurring problem assumes such proportions as to demand a solution independent of the vagaries of business or to threaten with disaster the entire business structure. The conference is of the opinion that in order to retain the benefits of our present financial and industrial order, a more equitable distribution of purchasing power accompanied by a lowering of governmental interest rates would relieve the frequency and severity of business depressions which result in widespread unemployment.

### International Co-operation

In another resolution the conference noted that there was a large body of agreement that a revival of constructional activity must be the prelude to economic recovery, and that constructional activity was unlikely to revive along normal channels and must rely on direct government action in the shape of public works, and it consequently urged on the Canadian government the importance of advocating at the forthcoming World Economic Conference a scheme of international co-operation for the promotion of public works.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### 61st Session of the Governing Body

At the 61st session of the Governing Body of the International Labour Office, which was held in Geneva from February 1 to 3, it was decided to place on the agenda of the 1934 Session of the International Labour Conference the question of the partial revision of the 1925 Convention concerning workmen's compensation for occupational diseases, with a view to the inclusion in this Convention of a further list of diseases for which compensation is payable, viz., silicosis; poisoning by phosphorus and its compounds, or its sequelae; poisoning by arsenic and its compounds, or its sequelae; poisoning by benzene, its homologues and nitro-amido derivatives and its sequelae; poisoning by hydro-carbons of the aliphatic series and their chlorinated derivatives and its sequelae; pathological manifestations due to radium and other radio-active substances and to X-rays; and epitheliomatous cancer of the skin.

The Governing Body also considered a note prepared by the International Labour Office on certain suggestions put forward by the representatives of overseas countries. It was decided to set up a committee of six members to study, with a view to the formulation of practical proposals, the means of increasing the participation of the various States members, and particularly the non-European States, in the work of the organization, with special

reference to the question of regular and complete representation at the sessions of the International Labour Conference.

It was decided to accept an invitation from the Council of the League of Nations to the International Labour Organization to participate in the World Monetary and Economic Conference, the agenda for which is published elsewhere in this issue. This invitation provides for the nomination of three representatives of the Organization, who would take part in the Conference in a consultative capacity, and for the utilization of the technical services of the International Labour Office by the Conference in so far as the latter should consider it necessary. The representatives of the Organization will be nominated by the Governing Body at its meeting in April.

It was also decided, in response to an invitation from the Council of the League of Nations, that the International Labour Office should collaborate with the Health Organization of the League of Nations in studying the effects of the economic depression on public health.

The next session of the Governing Body will open on April 27, and will be preceded by meetings of the various committees.

### Conditions of Work in the Textile Industry

In 1928 the Governing Body of the International Labour Office appointed a committee

to prepare the ground for a proposed international inquiry into conditions of work in the textile industry. This action followed a resolution adopted by the Eleventh International Labour Conference (LABOUR GAZETTE, July, 1928, page 759) in favour of an investigation into the conditions of work of men, women and children in the textile industries of the various countries of the world. Before such a wide-reaching inquiry was launched, it was thought desirable that its practicability, its scope, and the methods to be followed should be thoroughly considered. The committee to which this task was entrusted has held several meetings, and has made considerable progress towards establishing a plan.

The committee proposed that the inquiry should in the first place cover 22 countries (15 in Europe and 7 oversea), and be limited to the cotton and wool industries. It sketched the outline of the inquiry and invited the Office to draw up a questionnaire which might be forwarded to Governments. The draft so prepared was discussed at the next meeting, and suggestions were made for its amendment in various respects.

The majority of the Governments sent in replies, and, in the light of these, the committee drafted a new questionnaire, less extensive in scope and simpler in form than the first. In due course the Governing Body authorized the consultation of the Governments on this

new questionnaire, together with an invitation to them to indicate—taking into account the state of the textile industry—the period for holding the inquiry which would give the most satisfactory results. The replies were to be submitted to the committee, and on the report of the committee the Governing Body would decide whether the arrangements were sufficiently complete for the Governments to be asked to proceed to the making of the inquiry in their respective countries.

The results of this second consultation of Governments were laid before the committee at a meeting early in February. Replies had been received from 18 of the Governments consulted. The committee made a number of minor changes in the questionnaire in response to observations made by some of the Governments.

Before suggesting the date at which the inquiry should take place, the committee decided to recommend to the Governing Body that the Office should again approach the Governments, in order to find out definitely how far they were disposed to participate in the inquiry; when the Governments of the chief textile countries have indicated their willingness to co-operate, the Governing Body could decide whether the committee should meet again to consider the possibility of proceeding with the inquiry.

## INTERNATIONAL MONETARY AND ECONOMIC CONFERENCE

### Report of Preparatory Commission, with Outline of Agenda

THE Preparatory Commission of Experts, which met under the auspices of the League of Nations in November, 1932, and again in January, 1933, has drawn up an annotated agenda for the forthcoming Monetary and Economic Conference. This document outlines the measures necessary, in the opinion of the Commission, to deal with the present world crisis. The ground covered falls into two main sections—monetary and economic, the first of these sections dealing with (1) monetary and credit policy, (2) prices, (3) resumption of the movement of capital, and the second with (4) restrictions on international trade, (5) tariff and treaty policy, and (6) organization of production and trade.

The introduction briefly outlines the present world situation. Special attention is drawn to the International Labour Office estimate that there are at least 30 million workers at present unemployed; to the fall in commodity prices, which, since October, 1929, have declined by

roughly a third, while raw material prices are, on the average, 50 or 60 per cent below the 1929 level; and to the fact that the total value of world trade in the third quarter of 1932 was only about one-third that of the corresponding period of 1929. Commenting on the fall in prices, the Commission remarks:—

“Such price declines have produced profound disturbances in the economic system. They have thrown completely out of adjustment prevailing costs of the various factors of production, have made business enterprises generally unremunerative, and have seriously disorganized practically all the world markets.”

The suggestions for action in the monetary field involve the restoration of an effective international monetary standard based on gold, among the essential conditions for securing this being the restoration of equilibrium between prices and costs, and in future such “reasonable degree of stability of prices as the world measure of value should properly possess.”

Canada, I think I would do well to deal with each province in turn from the Atlantic to the Pacific.

*Prince Edward Island.*—First, let me refer to the province of Prince Edward Island, which we all know, is very small, with a population of only about 90,000 people. Relief has been carefully administered by the government of that province. I note that total federal disbursements towards direct relief in Prince Edward Island up to the fourteenth instant have amounted to \$9,301.86. This figure, however, does not represent the total cost, inasmuch as accounts in many instances do not reach the department for several months after the contraction for or payment of the sum. In all figures, which I shall give concerning direct relief, this fact must be borne in mind; accurate figures will not be obtainable until possibly some time after March 31, when the present legislation expires and the statutory report is tabled. At that time we shall know what the expenditures for direct relief for the present fiscal year have been. As a matter of fact, on the fifteenth of this month I signed recommendations to council for the payment of some accounts for direct relief for some of the municipalities of the province of Quebec, and may I explain that those liabilities were incurred under the 1930 legislation. It would appear that the people at that point were not pressed for money. The federal government contributed, further, in the province of Prince Edward Island, to the cost of reconstructing the Falconwood hospital which had been destroyed by fire. In this instance the Dominion's contribution amounted to \$5,328.24, being fifty per cent of the total labour cost of \$10,656.49. That is, with the direct relief disbursements, the total disbursements in Prince Edward Island to the fourteenth instant amount to \$14,630.10. As I have explained, some accounts do not reach us until some months after the actual expenditures have been made by the province or municipality. However, we have kept in close touch with the relief activities across the Dominion by arranging with the provinces to estimate as closely as possible at the end of each month the amount of relief which has been given during that month. Our experience has been that frequently these estimates are in excess of the actual expenditures. Nevertheless they give an approximate figure concerning relief actually dispensed.

*Nova Scotia.*—Now we come to the province of Nova Scotia. Direct relief in Nova Scotia is carried on by a three way contribution, 33½ per cent being contributed by the

Dominion, the province, and the municipality respectively. The full disbursements to date for direct relief in Nova Scotia amount to \$213,628.25. Some other projects were carried on in Nova Scotia which I shall briefly outline.

First, repatriation of miners to their native homes, involving a total expenditure of \$19,893.53, to which the Dominion contributed \$7,957.41. The situation which arose was shortly this: After the last investigation and report by Sir Andrew Rae Duncan, and following recommendations made in that report, certain mine shafts and collieries were closed. Some miners had been induced to come to New Waterford on the understanding they would receive continuous work. By reason of the closing down of these works they were thrown out of employment. They knew nothing else but coal mining, and all expressed the desire to be returned to their country of origin. The Dominion government contributed as I have indicated.

Mr. Spencer: What was their country of origin?

Mr. Gordon: I believe most of them were from central Europe, but if necessary I can get that information. Then, further referring to the projects I mentioned.

Second, provincial highway construction, involving a total expenditure of \$80,000, the Dominion paying \$32,000. This work was done on a forty-sixty basis.

Third, trans-Canada highway construction, which was done on an equal basis between the province and the Dominion. The amount involved was \$133,647.90, the Dominion contributing \$66,823.96.

Fourth, payment of excess cost of Nova Scotia coal delivered to Toronto, involving an amount of \$6,087.22, of which the Dominion's proportion is \$3,043.61.

Disbursements by the Dominion in respect of these projects amount to \$77,282.54, making a total disbursement to date for the province of Nova Scotia, of \$290,910.79.

Mr. Ralston: Is that from the extension of last year?

Mr. Gordon: Yes, from the time this law began to operate.

*New Brunswick.*—Turning now to the province of New Brunswick, I may say that the direct relief is on a basis of a contribution of 33½ per cent by the Dominion, the province and the municipality, respectively. The total disbursements by the federal government for direct relief in that province are, to date, \$38,434.06.

*Quebec.*—In the province of Quebec direct relief is, in the main, conducted on a three way equal basis, being distributed between the Dominion, the province and the municipality. In unorganized districts, however, the cost is borne fifty per cent by the Dominion and fifty per cent by the province. Provincial government authorities have represented, however, that many municipalities in the province of Quebec are totally unable to bear their full proportion of one-third and in such cases, after the province has demonstrated to the satisfaction of the Dominion government that such is the case, the proportion has been varied, the province and the Dominion making up the difference. To date, disbursements in the province of Quebec for direct relief amount to \$1,389,368.33.

*Ontario.*—In the province of Ontario direct relief is provided on a three way basis, being divided among the Dominion, the province and the municipality. The provincial government, however, established the fact that several municipalities were unable to bear their whole share of the cost of such relief. In this instance, as obtained with regard to the province of Quebec, investigations were made, and after reviewing the representations, reductions in the municipalities' shares were authorized, the Dominion and the province assuming equally the amount of such reduction. In unorganized districts the cost is shared on an equal basis between the Dominion and the province, as obtains in the province of Quebec. The total disbursements with regard to the Dominion's share of direct relief in the province of Ontario to date—and when I use the term "to date" I mean to February 16, 1933—amounts to \$2,633,427.18.

Some other expenditure was undertaken in the province of Ontario in order to complete two road projects undertaken under the 1931 legislation. The Dominion approved of total expenditure on these projects, to complete them, of \$85,000, of which the federal contribution was \$30,000. Throughout the province certain board camps have been established on a subsistence basis, with a cash allowance each month of \$10 per man. This at first was \$5 per man per month, but in the early fall, owing to certain economies which the province was able to effect in the matter of board and by an additional expenditure on the part of the province and the Dominion of 75 cents each, it was possible to increase this gratuity to the men to \$10 per man per month. The provincial authorities represented that it was desirable to take this action in order that those employed on the work could be able to provide themselves with clothing, the majority having reached the point where complete new outfits were necessary.

Mr. Young: They got \$10 and board, did they?

Mr. Gordon: Yes, and supplied their own clothing.

Wherever loans have been made under the authority of the legislation of the province, I am going to spread upon the record the facts with respect to them.

A loan was made to Ontario on January 14, 1932, of \$2,500,000. This sum was promptly repaid, and it practically became a book-keeping entry as far as the province of Ontario was concerned.

Mr. Bradette: Was that amount of over \$2,000,000 given for direct relief to the province of Ontario, or any of it, earmarked for the building of the trans-Canada highway in that Province?

Mr. Gordon: Not earmarked for the trans-Canada highway.

Mr. Bradette: Could the minister give any amount that was spent on the building of the trans-Canada highway?

Mr. Gordon: Not at the moment, but I will take note of the interrogation and I think I can give the information later.

*Manitoba.*—Turning to Manitoba, direct relief there is borne, the same as it is in the other provinces, on the three way basis between the Dominion, the province and the municipality; and fifty per cent between the province and the Dominion in unorganized districts and indigent municipalities, after they have been so reported upon by the province and approved of by the Dominion. The total disbursement in regard to the Dominion's share of direct relief in the province of Manitoba to date amounts to \$911,056.18. Then in Manitoba, by reason of the extension of public works which had been started under the legislation which preceded this act, work was carried on, and I will ask leave to read into Hansard the details of the number of individuals and the man days and wages paid during the time the work was in progress:

| Month          | Individuals | Man Days | Wages Paid |
|----------------|-------------|----------|------------|
| May.....       | 579         | 11,477   | \$ 59,561  |
| June.....      | 719         | 21,393   | 104,788    |
| July.....      | 795         | 43,288   | 261,008    |
| August.....    | 782         | 32,274   | 249,236    |
| September..... | 561         | 24,339   | 206,171    |
| October.....   | 561         | 16,235   | 94,725     |
| November.....  | 37          | 11,946   | 93,577     |
| December.....  | 80          | 3,610    | 14,453     |
| January.....   | 45          | 3,477    | 5,209      |

Representations were made to the government, with respect to certain municipalities in western Canada, to the effect that they

were unable to cope with the relief of many thousand of single homeless transients who, it was represented, were neither residents of the municipalities nor of the province itself. It arose as hon. members know, largely through the rather rapid filling up of western Canada with people from other lands. I am not going to criticize the efforts of those who preceded me with respect to that situation. The results, however, which might have not arisen had conditions not become such as they are, was that many people, single men and some women, found themselves without a home, without family ties of any kind, and were just drifting here and there; and it became apparent to this government that they could not be classed as residents of any municipality or any province. That being the case the federal government undertook to take care of this class of needy persons during the present winter. Early in October we were fortunate enough to secure the services of Doctor W. J. Black for a short period in order to assist the province and the federal government in organizing this relief, the management of the Canadian National Railways being good enough to let us have Dr. Black for this purpose. Early in October Dr. Black went to western Canada and, in conjunction with the municipal and provincial authorities, was instrumental in setting up commissions of public-spirited men in each province who undertook to administer this relief. The commission was appointed by the provincial government in each instance. In Manitoba the committee is composed of W. H. Carter, chairman; G. W. Northwood; and A. Mac-Namara, who I believe is one of the assistant deputy ministers in the Manitoba Government.

Mr. Brown: May I ask the minister if the Dominion government is contributing any part of the money which is being paid to hired men on the farms? I understand the Manitoba government is sending out men on the farms and is paying them \$5 per month. Is the Dominion government bearing any part of that expense?

Mr. Gordon: I had not heard that the Manitoba government was paying \$5 a month to men on farms.

Mr. Brown: Well, the money is being paid from some place.

Mr. Gordon: I have seen it stated in the press in some cases that the Manitoba government is paying and has paid \$5 a month to men on the farm.

Mr. Brown: That is a fact.

Mr. Gordon: It may be a fact—I do not know it to be a fact. But I do know that the Dominion government has paid it all up to date. The province may be doing it as well. That is the situation—the Dominion government is paying all of that \$5 a month.

In Saskatchewan the relief commission has assumed this responsibility in addition to its other duties. The relief commission is composed of Henry Black, chairman; C. B. Daniels, general manager; W. G. Yule, A. E. Whitmore, H. A. Munns, Mrs. Pearl Johnson; Oliver J. Dean, secretary.

The committee in Alberta is composed of A. A. Mackenzie, Edmonton, chairman; Colonel G. E. Sanders, Calgary, and Robert Livingstone, Lethbridge. I may say I received some critical communications after the appointment of the committee in Alberta, suggesting that I had appointed men to this commission to administer the relief who should not be appointed, that these jobs should go to the unemployed. But when I advised them that these men were doing it purely out of unselfishness, without hope of reward other than a lot of criticism and what recognition history may give them, I never got an answer to my letter.

The committee in British Columbia is composed of: Major J. G. Fordham, Vancouver, chairman; Colonel J. S. Dennis, Victoria; Professor W. A. Carrothers, Vancouver.

Agreements have been entered into with the four western provinces whereby the Dominion pays one hundred per cent of the cost of providing food, fuel, clothing and shelter to single homeless unemployed persons at a cost not exceeding 40 cents per diem. The agreements also provide for the placement of single homeless persons on farms at \$5 per month, payable by the Dominion.

Mr. Brown: I would like to ask where that money is coming from?

Mr. Gordon: It is covered by written agreements with the provinces and is paid by the Dominion.

Continuing his speech after the recess, Mr. Gordon said: At the adjournment at six o'clock I was dealing with the province of Manitoba with respect to the Relief Act of 1932. As at December 31, 1932, the commissions administering relief to single homeless persons reported the following numbers being taken care of under the arrangement:—

|                          |        |
|--------------------------|--------|
| Manitoba.. . . .         | 5,702  |
| Saskatchewan.. . . .     | 4,093  |
| Alberta.. . . .          | 6,509  |
| British Columbia.. . . . | 14,870 |

Accounts have been received and paid for relief settlements and other projects in Manitoba amounting to \$87,694.93. Under the re-

lief settlement scheme there were settled on farms in the following months the numbers indicated:—

| Month—            | Heads of families | Dependents |
|-------------------|-------------------|------------|
| July.. . . .      | 82                | 287        |
| September.. . . . | 75                | 272        |
| October.. . . .   | 22                | 78         |
| November.. . . .  | 6                 | 31         |
| December.. . . .  | 1                 | 8          |

Under the farm placement scheme the provinces report the following unemployed persons placed on farms:—

| Month—           | Number | Cost    |
|------------------|--------|---------|
| November.. . . . | 952    | \$1,500 |
| December.. . . . | 1,228  | 4,000   |
| January.. . . .  | 2,000  | 9,000   |

In passing I may say that about a month ago I was advised by the officer representing the Manitoba government, and also by our own representative, that we had places on farms in the province for something over 700 single men. At that time we were taking care of something over 3,000 men in the city of Winnipeg, but we could not prevail upon any of them to go to work; they all had their reasons or excuses.

Mr. Young: What did you do with them?

Mr. Gordon: We have tried to prevail upon them to take work. Of course, some of them are not fit for farm work. Since that time we have been able to move a considerable number out of the city of Winnipeg.

Mr. Young: What do you do with those who will not work?

Mr. Gordon: We just keep on feeding them.

In addition to the above relief, the Dominion advanced to the province against its treasury bills loans in the following amounts and for the following purposes:—

Loans and advances to Manitoba under relief legislation to February 14, 1933.

#### PURPOSE OF LOAN OR ADVANCE

|   |                 |
|---|-----------------|
| Total loans, being advances of Dominion's share of approved public works.. . . .                            | \$ 2,600,000 00 |
| By credits applied.. . . .  | 2,523,653 33    |
| Balance to be liquidated.. . . .  | 76,346 67       |
| Total loans covering provinces' share of public works and/or to loan municipalities for their share.. . . . | 2,900,000 00    |
| Less credits Dominion's share public works.. . . .  | .....           |
| Balance outstanding.. . . .   | 2,900,000 00    |
| Total loans covering New York commitments.. . . .   | 3,133,315 85    |
| Less repayments.. . . .   | .....           |
| Balance outstanding.. . . .   | 3,133,315 85    |
| Total loans re direct relief expenditures.. . . .   | 1,527,313 60    |

|   |               |
|---|---------------|
| Total advances re single homeless unemployed.. . . .                          | 150,000 00    |
| By credits applied.. . . .  | 70,827 68     |
| Balance outstanding.. . . .   | 79,172 32     |
| Total loans re assistance to farmers including purchase of seed grain.. . . . | 600,000 00    |
| Less repayment.. . . .  | 220,000 00    |
| Balance outstanding.. . . .   | 380,000 00    |
| Total loans and advances as above.. . . .                                     | 10,910,629 45 |
| Less repayments and credits applied.. . . .                                   | 2,814,481 01  |
| Net amount outstanding.. . . .  | 8,096,148 44  |

In the province of Manitoba to December 31 a bonus of \$1,169,025.47 was paid on 23,380,509 bushels of wheat.

*Saskatchewan.*—With respect to Saskatchewan the direct relief is administered by a three way contribution, municipality, province and Dominion, and in the unorganized districts the province and the Dominion divide the direct relief expenditure on an equal basis. Relief has been administered in the province of Saskatchewan through the province and the municipalities as well as through the agency of the Saskatchewan relief commission, which has functioned in the dried out areas. In addition, Dominion relief has been administered to single homeless unemployed persons. Certain extensions of the 1931 works program was authorized and employment was furnished to the following number of men in the following months: the number of man days and the wages paid is set out in a schedule which I ask the permission of the house to have put on Hansard. It is as follows:—

Extensions of 1931 works—Under extensions of time on works approved under the 1931 act work was furnished to the following number of men in the following months:

May—1,431 men worked 29,945 man-days and received \$103,844 in wages.

June—1,027 men worked 23,956 man-days and received \$73,347 in wages.

July—1,180 men worked 41,762 man-days and received \$94,812 in wages.

August—727 men worked 21,863 man-days and received \$59,589 in wages.

September—523 men worked 15,941 man-days and received \$43,852 in wages.

October—523 men worked 15,496 man-days and received \$58,989 in wages.

November—168 men worked 8,531 man-days and received \$29,482 in wages.

December—6 men worked 69 man-days and received \$433 in wages.

Total—157,563 man-days work was supplied and \$464,348 was paid in wages.

Mr. Ralston: Could the minister give the total in dollars?

Mr. Gordon: The total is \$464,348 in wages.

In July, 92 families representing 318 dependents were settled on farms and 304 single homeless persons were placed with farmers.

In August, 289 single homeless persons were placed on farms and 517 single homeless men were employed 1,841 man days in sustenance camps at a cost of approximately \$5,079.

In September, 274 families with 995 dependents were settled on farms and 418 single homeless men were employed in camps at an approximate cost of \$5,057.

In October, 1,469 single homeless men were employed in camps at an approximate cost of \$14,850.

In November, fourteen families with seventy-one dependents were settled on farms, also 532 single homeless men were cared for in camps at an approximate cost of \$3,600.

In December, 2,192 single persons were placed in farm jobs and received \$11,000 in wages and 1,966 single homeless men in camps were employed 36,069 man days at an approximate cost of \$20,887.

In January, 5,497 single persons were placed in farm jobs and were paid \$27,485 in wages.

Mr. Young: Do those 5,000 include the number placed in December or are they in addition thereto?

Mr. Gordon: I am giving the figures for each month.

In January, 5,497 single men were placed in farm jobs.

Mr. Young: But 2,000 were placed in December. Does that make 7,000?

Mr. Gordon: I have given each month from July.

Mr. Ralston: The new placements?

Mr. Gordon: Yes.

Mr. Woodsworth: Are there any repeaters—people sent out who stay for a few days and are subsequently sent out to a second job?

Mr. Gordon: There may be some. I have not the details of that, but generally speaking, most of these men are placed and continue to stay.

As I said, in January, 5,497 single persons were placed in farm jobs and were paid \$27,485 in wages; also 647 single persons were employed in camps, 33,200 man days at an approximate cost of \$18,405.

Disbursements in connection with relief settlement and other projects amount to date to \$19,096.71, and direct relief disbursements amount to date to \$136,602.99.

Expenditures made by the Saskatchewan relief commission in what is known as "A" area, with which I presume hon. members are familiar, amounted to \$7,668,667.28, and in "B" area to \$1,562,735.89.

For freight on moving settlers' effects in "A" and "B" areas, the expenditures were \$77,676.72. This makes a total of \$9,309,079.89, the Dominion proportion being \$3,448,304.78, and the provincial proportion being \$860,775.11.

In these areas to December 31, 1932, direct relief was given by the relief commission to families numbering 60,755, with dependents numbering 273,397. In addition aid was given to individual cases to the number of 305. The total number given relief being 334,457. Of course we all entertain the hope that this province will not again meet with the tragedy that overtook it with respect to crops.

Loans and advances to Saskatchewan to February 14, 1933, are as follows:

|   |               | Credits<br>or Re-<br>payments | Balance<br>Out-<br>standing |
|---|---------------|-------------------------------|-----------------------------|
|   | \$ cts.       | \$ cts.                       | \$ cts.                     |
| Total loans being advanced in respect of Dominion share of approved works.....            | 1,000,000 00  | 1,000,000 00                  | Nil                         |
| Total loans covering province's share of public works and of loans to municipalities..... | 1,673,212 04  | Nil                           | 1,673,212 04                |
| Total loans covering New York commitments.....  | 3,934,341 46  | Nil                           | 3,934,341 46                |

| Totals.....   | 29,811,293 23 | 9,907,371 57                  | 19,903,921 66               |

\*Of course, as the Dominion Government is assuming that amount, nothing will be returned.

As regards wheat bonus, an amount of \$5,669,919.78 was paid up to the 31st day of December in the province of Saskatchewan in respect of 113,398,395 bushels of wheat.

Alberta.—In the province of Alberta the direct relief is provided on a three way basis, the same as I have made reference to in other provinces: municipalities, province and

Dominion, and in unorganized districts on an equal basis between the province and the Dominion. Again I would like to have in-

serted in Hansard a schedule showing the employment afforded, the farm settlement and placements. The table is as follows:

EMPLOYMENT AFFORDED

| Month          | Through extension of works approved under the 1931 Act |            | Single, homeless men in subsistence camps |                  |
|----------------|--|------------|---|------------------|
|                | No. men  | Wages      | No. men                                   | Approximate cost |
| May.....       | 1,278  | \$ 260,660 | 736                                       | \$ 15,410        |
| June.....      | 1,421  | 215,876    | 835                                       | 18,431           |
| July.....      | 623  | 48,647     | 972                                       | 21,996           |
| August.....    | 294  | 93,903     | 986                                       | 20,713           |
| September..... | 48   | 12,324     | 709                                       | 12,853           |
| October.....   | Work completed   | "          | 245                                       | 9,873            |
| November.....  | "  | "          | 3,560                                     | 35,324           |
| December.....  | "  | "          | 363                                       | 5,784            |
| January.....   | 24*  | 2,100*     |   |                  |
|                |  | 633,510    |   | 140,384          |

\*On provincial work (Highwood river) embankment.

#### FARM SETTLEMENT AND PLACEMENT

November—51 families with 249 dependents were placed on farms. Under the relief commission for single homeless men, 2,697 single, homeless persons were cared for in urban centres at an approximate cost of \$23,130 (Dominion 100 per cent).

December—6,146 single, homeless persons were cared for in urban centres at an approximate cost of \$63,172.

January—350 single persons were placed in farm jobs and received from the Dominion

\$1,500 in wages. In addition the commission cared for 6,200 persons in urban centres at an approximate cost of \$72,500.

Total disbursements—to date in respect of direct relief and other projects amount to \$521,029.67.

The total disbursements to date in respect of direct relief and other projects in Alberta amounts to \$521,029.67.

Loans to Alberta as at February 14, 1933, are as follows:

| Description   | Loan or advance | Credits of repayments | Balance outstanding |
|---|-----------------|-----------------------|---------------------|
|   | \$              | \$                    | \$                  |
| 1. Loans, being advances of Dominion's share of approved works.....       | 2,000,000 00    | 1,953,954 17          | 46,045 83           |
| 2. Loans, covering province's share and/or to loan to municipalities..... | 2,200,000 00    | Nil                   | 2,200,000 00        |
| 3. Loans covering New York commitments.....                               | 3,142,000 00    | Nil                   | 3,142,000 00        |
| 4. Loans for provincial purposes.....                                     | 500,000 00      | Nil                   | 500,000 00          |
| 5. Advances re single homeless unemployed.....                            | 150,000 00      | Nil                   | 150,000 00          |
| 6. Loans re assistance to farmers including purchase of seed grain.....   | 140,000 00      | Nil                   | 140,000 00          |
| Totals.....   | 8,132,000 00    | 1,953,954 17          | 6,178,045 83        |

Wheat bonus—\$5,857,735.42 was paid up to the 31st of December in respect to 117,154,708 bushels of wheat.

The same observations would here apply with respect to the single homeless unemployed as I made with respect to the other western provinces.

*British Columbia.*—In British Columbia a direct relief is administered on the same basis as respects the Dominion, the province and the municipalities, each contributing one-

third, and in the unorganized districts there are contributions in equal amounts by the province and the Dominion. By reason of the extension for completion of works which had been approved under the 1931 act but were not completed on May 1, employment was given to the following number of men in the following months:

| Month          | Number of men | Man days | Wages paid |
|----------------|---------------|----------|------------|
|                |               |          | \$         |
| May.....       | 254           | 5,353    | 18,235     |
| June.....      | 126           | 2,118    | 7,233      |
| July.....      | 64            | 1,734    | 5,887      |
| August.....    | 173           | 1,435    | 7,594      |
| September..... | 150           | 1,276    | 9,466      |
|                |               | 11,916   | 48,415     |

In addition, single men were cared for and given employment in subsistence camps on a fifty-fifty basis with the province to the

following number of men in the following months:

| Month          | Number of men | Man days | Cost    |
|----------------|---------------|----------|---------|
|                |               |          | \$      |
| May.....       | 7,896         | 98,293   | 147,169 |
| June.....      | 7,706         | 107,070  | 143,241 |
| July.....      | 6,001         | 89,740   | 108,046 |
| August.....    | 6,809         | 83,865   | 88,148  |
| September..... | 6,532         | 57,398   | 71,918  |
| October.....   | 3,726         | 45,762   | 59,384  |
| January.....   | 350           | 10,000   | 54,000  |
|                |               | 492,128  | 671,906 |

In the months of November, December and January, the federal government assumed one hundred per cent of the cost of single, homeless, unemployed persons, and during those

months the following persons of this class were cared for in relief camps or in urban centres:

| Month         | Number of men | Approximate cost |
|---------------|---------------|------------------|
|               |               | \$               |
| November..... | 12,854        | 127,536          |
| December..... | 14,870        | 149,400          |
| January.....  | 18,300        | 182,000          |

From May 1, 1932, to February 16, 1933, disbursements in respect to the federal contribution amounted to \$1,383,347.27.

Loans and advances to British Columbia to February 14, 1933, are as follows:

| Description  | Total loan or advance | Credits or repayments | Balance outstanding |
|--|-----------------------|-----------------------|---------------------|
|  | \$                    | \$                    | \$                  |
| 1. Loans, being advances of Dominion's share of approved works.....      | 2,800,000 00          | 2,800,000 00          | Nil                 |
| 2. Loans covering province's share and/or to loan to municipalities..... | 3,500,000 00          | 238,412 55            | 3,261,587 45        |
| 3. Loans covering New York commitments.....                              | 5,104,164 69          | 3,040,670 69          | 2,063,494 00        |
| 4. Loans re direct relief expenditures.....                              | 262,500 00            | Nil                   | 262,500 00          |
| 5. Advances re direct relief expenditures.....                           | 112,500 00            | 106,271 65            | 6,228 35            |
| 6. Advances re single homeless unemployed.....                           | 280,000 00            | Nil                   | 280,000 00          |
| Totals.....  | 12,059,164 69         | 6,185,354 89          | 5,873,809 80        |

It will be observed with respect to British Columbia that the province has repaid a little over fifty per cent of the loans and advances made to them.

Mr. Ralston: That repayment is only by reason of the fact that expenditures have been made to equal the Dominion's share of the advance?

Mr. Gordon: Not in its entirety. The largest payment that was made by British Columbia was a loan of \$3,040,670.69, which is part of a loan of \$5,104,164.69, advanced by the Dominion for New York commitments.

Mr. Ralston: But the other amount of \$2,800,000 is really a cross entry.

Mr. Gordon: Extending the sum that was agreed upon for relief

Mr. Ralston: But it is really a cross entry.

Mr. Gordon: In British Columbia with respect to the wheat bonus, the Dominion government paid out in the Peace River block in that province \$23,440.40, with respect to 468,808 bushels of wheat. The total thus paid out in the four western provinces, Manitoba, Alberta, Saskatchewan, the Peace river block and British Columbia, to December 31 last amounted to \$12,720,121.07 with respect to 254,402,420 bushels of wheat.

### Dominion Works

Other works were projected by the Dominion government which in the judgment of the government were desirable in different parts of Canada, under the supervision of different departmental officials, and the work

was organized in such a way that it could with the least expense be supervised by these officials.

In British Columbia there was the projection of the Banff-Jasper highway, the approximate cost of which was \$235,294, or

an average cost per day of \$2.88, including materials. For the information of hon. members I think it is desirable that the accompanying schedule be put on Hansard so that hon. gentlemen will be able to review it before the bill is dealt with:

WORKS PERFORMED BY THE INTERIOR DEPARTMENT

British Columbia:—Banff-Jasper Highway

| Month                                  | Number men | Man days | Approximate cost |
|--|------------|----------|------------------|
| British Columbia:—Banff-Jasper Highway |            |          |                  |
| May.....                               | 256        | 2,403    | \$235,294 00     |
| June.....                              | 513        | 10,768   |                  |
| July.....                              | 827        | 18,403   |                  |
| August.....                            | 622        | 13,997   |                  |
| September.....                         | 363        | 9,466    |                  |
| October.....                           | 629        | 11,822   |                  |
| November.....                          | 646        | 14,654   |                  |
|  |            | 81,513   |                  |

Alberta:—Banff-Waterton Lakes Parks—Elk Island—National Parks

|               |     |       |            |
|---------------|-----|-------|------------|
| November..... | 165 | 1,843 | \$4,449 00 |

| November..... | 295 | 4,730 | \$10,728 00 |
|---------------|-----|-------|-------------|

Manitoba:—Riding Mountain Park

|               |       |        |             |
|---------------|-------|--------|-------------|
| October.....  | 201   | 2,734  | \$ 3,402 00 |
| November..... | 1,008 | 17,800 | 10,482 00   |
|               |       | 20,534 | \$13,884 00 |

In all parks in

|               |       |        |              |
|---------------|-------|--------|--------------|
| December..... | 2,958 | 60,924 | \$102,962 00 |
|---------------|-------|--------|--------------|

In other words to December in all parks last fall, 169,544 days' work was given to needy men at an approximate cost of \$367,317 or approximately \$2.17 per day.

In all works in the national parks to the amount of \$563,800.00 were authorized and up to date \$411,205.20 has been expended.

In Alberta, in connection with the Banff-Waterton lakes park, Elk island, and national parks there was expended \$4,449, at an average cost of \$2.42 per day, the work being carried on during the month of November, and 165 men being employed. This amount provided 1,843 man days' work.

Mr. Mackenzie King: Is that \$2.42 per man?

Mr. Gordon: That includes materials. In Saskatchewan in the Prince Albert national park in the month of November 295 men were employed, giving 4,730 man day's work at an approximate cost of \$10,728. I am inclined to think that that is the exact figure. The average cost was \$2.27 per day.

Mr. Woodsworth: Can the minister tell us how much of this actually went to the men? He has said that material is included.

Mr. Gordon: I shall take note of the hon. member's request; I think I can get the information. In Riding Mountain park, Manitoba, there were in October 201 men employed, and in November 1,008; a total of 20,534 man days' work at a cost of \$13,884, or an average cost of 68 cents. In all parks in December there were 2,958 men employed, giving 60,924 man days' work at a cost of \$102,962 or an average cost of \$1.69. In other words, in all the parks last fall, 169,544 days' work were given to needy men at an approximate cost of \$367,317, or \$2.17 per day. In all works in the national parks \$563,800 was authorized for payment, and up to date \$411,205.20 has been expended.

In addition to that, work has been done in Manitoba by the federal Department of Public Works in connection with the dykes

along the Assiniboine river, and in that work \$6,904 was expended.

It became apparent last fall that every possible avenue should be explored in order to find some method to take care of single homeless men, in addition to the policy and program I have just outlined. In this respect the government decided that the organization of the Department of National Defence might well be utilized in the construction of airway landing fields in connection with the Trans-Canada Airway. This program of works the government believed to be for the general advantage of Canada, and the men being under control and under discipline and living in clean and comfortable quarters, the government considered it desirable to utilize this machinery of government to take care of as many of these men as the work warranted. The general conditions provided were that the men and supervisory staffs would receive no pay, but would be housed, clothed, fed and cared for and be given a small cash allowance varying from 20 cents a day in the case of labourers to \$60 a month in the case of foremen. It is estimated that for the period of one year the average total cost per person per day given relief, including the purchase of tools and materials for construction, and in certain cases land required, would not exceed more than a dollar. Eight hours work per day for six days a week would be required, with the exception that statutory holidays would be observed and Saturday afternoons used for recreation purposes and for the general cleaning up of the camps. Clothing, cooking utensils, camp equipment, blankets and so on, all on hand in the department and surplus to ordinary requirements of the department, would be made available, and the existing nation-wide organization for administration, purchase and issue of supplies, and accounting, would be used. No military

discipline would be instituted. The personnel would remain civilian, and so long as they behaved themselves and observed the few simple rules designed in the interests and comfort of the majority, they would continue to be cared for. The personnel could be discharged by the officer in charge of a project for cause. No compulsion would be exercised on them to remain any longer than they wished, and every endeavour made to assist them to fit themselves for and to obtain remunerative employment. This work is still being carried on, and it is proposed that the works to be undertaken by the department as a measure for the relief of unemployment should not include the current works which would be undertaken in any event, but should anticipate by some years the execution of construction which was necessary and which had been planned. Only works with a relatively low cost for material and low maintenance charges would be included.

I have already laid upon the table of the house order in council dated October 8, 1932, authorizing works which it was decided best lent themselves to the scheme. It provided for the authorization of (1) placing some 2,000 men at work on the construction of intermediate landing fields on the Trans-Canada Airways; (2) repairs to the fortifications at Halifax and Quebec, the preservation of which was so desirable as national historic monuments; (3) the construction of air stations at Trenton and Rockliffe.

This program has been slightly enlarged since then, and I have here a statement which I shall ask to have included in Hansard showing in detail the various works which have been initiated and are being carried out at the present time, the number of men employed, and the approximate expenditures that have been necessitated thereby:—

To summarize, I might say that in addition to the repairs to the fortifications at Halifax and Quebec there are eighteen camps at present in operation in the provinces of New Brunswick, Quebec, Ontario, Manitoba and British Columbia in connection with the landing fields on the Trans-Canada Airways. In the month of October thirty-eight men were employed to the extent of 55 man days; in November 807 men were employed to the extent of 12,581 man days; in December, 1,393 men were employed to a total of 30,306 man days; in January 1,982 men were employed to a total of 41,127 man days, or a total of 84,069 man days for the three months. The strength on the fifteenth of this month was 2,089.

The total expenditure to the end of January, covering the cost of materials, purchase of land where necessary, food, clothing, tools and equipment, equalled \$93,196.49. These works necessitated an average expenditure per man of \$1.10 per day. This figure per day does not include Sundays and half-holidays and days in hospital, precise figures of which are not available, but allowing for Sundays and a half day for Saturdays, the approximate total expenditure works out per man day of relief at 86 cents. The estimated total value of the work done to January 31, is \$69,386.66, which does not include the costs incurred for temporary accommodation, purchase of land, and so on. As these charges are absorbed it is considered that the value of work done will considerably exceed the total cost.

Mr. Woodsworth: What is meant by these charges being absorbed?

Mr. Gordon: For instance, the total amount spent is \$93,196.49. We estimate that the value of the work, as a work, is \$69,000. The land we believe is worth a considerable sum of money, and probably will be worth more. Add to that the value of the work, and the whole value will equal or probably exceed the actual expenditure.

I have had occasion to visit some of these camps, and I do not think anyone need be at all concerned about the discipline, the cleanliness and the general atmosphere in the camps. The men, of course, are not getting very much in the way of cash, but they are getting fine shelter, good food, good clothing, and they are working, working splendidly and looking forward to the time when they can be absorbed in normal vocations. There has been very little in the way of sickness in any of these camps.

### Summary

I should like shortly to summarize the activities under the 1932 act:

First; a back to the land movement has been initiated and has met with encouraging

co-operation on the part of the provinces and the larger municipalities. A very definite start has been made, 1,651 families with 6,906 dependents have already been approved and placed on farms. This in my judgment warrants the belief that the whole quota of 6,923 families for whose settlement provision has been made will be placed on farms before March 31, 1934, at which date our agreement with the provinces expires. The Dominion has authorized a contribution of \$1,385,675 as a non-recoverable grant to settlers, to which the provinces and municipalities make contributions in like amount, making a total of \$4,157,025 available to finance the scheme. To date there has been expended by the Dominion \$31,062.98.

Second: the Interior Department have supervised works in the national parks and on the Banff-Jasper highway in Alberta and British Columbia through the summer and fall months when such work can be usefully done. This has resulted in 169,544 man days employment being supplied to needy men at a cost of roughly \$367,317 to December 31st.

Third: the Department of Public Works in co-operation with the provincial government has completed a small work in flood prevention on the Assiniboine river in Manitoba, to which the federal government's contribution was \$6,904.

Fourth: a small sum of \$3,000 was expended through the Department of Agriculture in fitting up some boats to assist in better export facilities for live cattle to Great Britain.

Fifth: under the Department of National Defence useful works which ordinarily would probably not be undertaken for a few years, but works which it is desirable in the public interest to have done without delay, have been commenced on the landing fields in the trans-Canada airway and elsewhere.

Sixth: direct relief. The total of accounts paid or amounts credited to advances is \$7,851,192.59. The cost of direct relief has, in the main been, as hitherto, shared equally by the municipality, the province and the Dominion. In a few cases where the province has established the fact that the municipality was unable to assume its full share of 33½ per cent this has been reduced to such a proportion as, in the judgment of the province and the Dominion, the municipality could assume; the balance has been shared equally by the province and Dominion. This principle applies also in unorganized districts where the province and the Dominion divide the total cost equally between the two governments. In the four western provinces the Dominion has, during the fall and winter, been assuming 100 per cent of the cost of direct relief to single homeless unemployed persons.

Administration of relief to those in need in a country such as Canada, whose constitution is a federal and not a legislative union, presents very much difficulties. Difficulties from other angles are encountered by the provinces and the municipalities but it is gratifying to note that the expenses of providing for those in want have been rapidly decreasing, and that the amount spent by the Dominion for relief purposes during the fiscal year 1931-32 amounted to the rather alarming figure of \$41,500,000, and this figure may yet reach \$45,600,000 if commitments which have been made regarding works are fulfilled. During the present fiscal year, by reason of the change of policy which took place after the conference with the provincial representatives in April last, and by reason of the better organization which resulted from experience obtained by municipalities and provinces during the two previous years' administration, we anticipate that the total federal expenditure for relief purposes will not exceed \$25,000,000, and will probably be less. The total to date of accounts paid and of credits against advances amounts to \$11,207,874.72. But, as previously explained, accounts are usually slow in reaching Ottawa, and this probably only represents expenditures up to a month or two ago.

I am firmly of the belief, and I believe the people of this country are steadily growing to believe, that the individual himself is learning that he must not rely too much upon the state; that in a country such as we have, individuals must be individualists, and take advantage of the opportunities that are theirs. I am well aware that for many reasons it is difficult for men engaged in certain vocations, who have their homes established in the urban centres, to take advantage of the opportunities that a great country like Canada affords. But I am confident, having regard to the experience in the administration of relief to the needy during the past twelve months, that the individual is becoming increasingly active to take advantage of such opportunities as there are to make himself self-sustaining. I sometimes wonder if one can draw the line between the responsibility of the state and the responsibility of the individual. Some people advocate destroying individualism, turning everything into system. They advocate mass men rather than individual men. I am not prepared to subscribe to that doctrine, and while in certain parts of Canada to-day things are not at all normal as far as the life of the Canadian people is concerned, and their ability to earn money, yet in many parts of Canada the business of the country is advancing—I could name parts

of Canada where it is—and I am confident that the future holds for the people of this country the promise of better times and the opportunity to sustain themselves. Certainly when you find the direct relief to those who are needy and are practically indigent falling from \$46,000,000 down to less than \$25,000,000 even though the number receiving relief for the varying periods has increased, it is a hopeful sign which I think will be gratifying to the taxpayers of the country, notwithstanding that it may be said that the reduction is due largely to better organization, because no province and no municipality in the Dominion, at the outset in 1930, was equipped or organized to take care of the situation which was then upon us. But each succeeding month I believe is teaching the lesson of economy with respect to the administration of the moneys which are being subscribed by the taxpayers to take care of their less fortunate fellow citizens, and I have myself a confident belief that with the gradual turn towards other vocations than those which have afforded a certain sense of security to our people in the past, and better business conditions, it will not be too long delayed when the granting of direct relief to our citizens will disappear.

Mr. Woodsworth: May I ask the number now on unemployment relief in Canada?

Mr. Gordon: The last month for which I have any return is January. I have the total number of men, women and children receiving relief, including all those who in normal times are given relief, because we can all feel assured that all these people are receiving relief, and that number—it is for varying periods—is 1,357,562. That includes all those classes for varying periods of time. It is represented by 252,000 heads of families.

---

Earnings in the men's clothing industry in the United States in 1932, averaged 19.5 cents less per hour and \$8.58 less per full-time week than in 1930, according to a survey recently completed by the Bureau of Labour Statistics covering 243 representative establishments manufacturing men's outer garments—coats, pants, vests, and overcoats. In 1932 the average earnings were 50.6 cents per hour and \$22.47 per full-time week. Full-time hours averaged 44.4 in 1932 as compared with 44.3 in 1930, an increase of 0.1 hour per week. The average number of days worked per week in 1932 by males in the various occupations ranged from 4.7 to 5.3, and by females, from 4.3 to 5.5.

## RETURN TO THE LAND MOVEMENT IN THE PROVINCE OF QUEBEC IN 1932 .

THE following table shows the number of families and single men who were "returned to the land" in the various counties in the Province of Quebec during the year 1932. The number of settlers returning from the United States is also shown. The provisions of the Act to Promote the Return to the Land, which was passed by the Legislature last year, were outlined in the LABOUR GAZETTE, March, 1932, page 298. The Act provided for the acquisition by the government of vacant lands, including those sold for municipal taxes, at a price not exceeding \$100 in each lot or \$5 per arpent, and for the disposal of such lands, where they are suitable for farming, to settlers under conditions to be fixed by the government. The provincial government was also empowered to effect agreements with the Federal or municipal authorities, timber limit holders, and others, for the purpose of promoting the interest of colonization and the return to the land. The figures given below show that the number of families returning to the land was 3,678, the number of single men being 985. Of these settlers, 329 families and 208 single men returned from the United States to take up land in the Province.

## Resolutions Adopted by Dominion-Provincial Conference, January 17-19, on present unemployment and relief conditions

### Item No. 1

Present unemployment and relief conditions. Are they being satisfactorily dealt with? If not, what modifications are suggested?

The Conference adopted the following report submitted by the Committee appointed to deal with Item No. 1 of the Agenda.

1. That federal assistance to the provinces in the discharge of their constitutional obligations should be continued on the basis of the

provinces dealing with the present unprecedented economic conditions by distribution of direct relief.

2. Attention is directed, however, to the following matters as worthy of consideration by the federal government.

#### a. *Percentage of financial responsibility:*

While some provinces desire an increase in the proportion contributed by the Dominion, other provinces are satisfied with the present

division and do not feel that an increase should be asked for.

*b. Medical Services:*

In the opinion of the committee a limited expenditure for medical attention, where circumstances render such expenditure necessary, might be regarded as coming within the scope of the definition of direct relief.

*c. Limitation or per capita per diem expenditure:*

The suggestion is offered that future relief arrangements made between the Dominion and the provinces might be on a basis of a definite maximum amount per capita per diem, subject to variations to accord with local conditions and past experience. The committee decided that this suggestion should be referred to each of the provincial administrations for consideration, and subject to arrangement between the Dominion and a province as to a suitable scale, each province might have the option of accepting such a plan or adhering to the present arrangement.

One of the advantages of a per diem scale of contribution by the Dominion would be the avoidance of settling difficult questions as to what items could or could not be included under the present definition of direct relief.

*d. Cost of Additional Investigation:*

The committee considered the suggestion that additional investigators be employed for the purpose of controlling expenditures and preventing abuse, and decided that such expenditure could be justified amply on the grounds of sound administration and economy and recommends that the Dominion should share in the cost equally with the province. In this regard it is suggested that Dominion and Provincial officials engaged in the administration of relief should confer and draw up a system of regulations, so as to have as great a uniformity in relief administration as possible.

*e. Local administration of relief by committees or commissions:*

The Committee is favourably disposed to the idea that local authorities might to advantage entrust the granting of relief to committees or commissions but felt that this was a matter in the discretion of each province.

*f. Public Works:*

While the committee is still of the opinion that relief works should not be entered into as a general policy, it is felt that, if local

conditions exist whereby employment could be given by means of necessary public works, the federal government should consider favourably an application for assistance towards bearing its share of the cost of actual labour, provided a system of rotation is established so as to divide the work among the greatest number of unemployed.

*g. Single, Homeless, Unemployed:*

It is recommended that single men "unemployed and destitute" be regarded as coming within the category of "single, homeless, unemployed," under the agreements entered into between certain of the provinces and the Dominion.

*h. Unemployed Youths:*

The Committee recommends that the Dominion Director of Unemployment Relief take up with the administrative officers in the provinces the peculiar problem of the youth, out of school or college, who finds himself without work and without support, with a view to suggesting means of dealing more satisfactorily with this question.

**Item No. 7**

The regulation of truck and motor bus services with interprovincial and national rail transportation facilities:

It was agreed that the Minister of Railways should submit to the provinces a questionnaire dealing with matters relating to the regulation of truck and motor bus services, and that after assembly and study of the information obtained, a conference of the appropriate officials of the Dominion and the provinces should be called to consider the whole situation. It was further agreed that the Dominion Statistician should assist the Minister of Railways in preparing the questionnaire.

**Item No. 8**

Uniform statistical information:

The Conference adopted the following resolution:

That in the opinion of this Conference the necessity for accurate and comparable statistics relating to public finance is apparent and the conference recommends that the Dominion Statistician should communicate with the treasurers and/or Statisticians of the several provinces with a view of securing uniformly classified statistical information.

## Program of the United States Executive to Restore National Prosperity

The policies to be followed by the government of the United States in an effort to restore prosperity were outlined by President Franklin D. Roosevelt in his inaugural address on March 4. After a reference to the fact that "plenty is at our doorstep, but a generous use of it languishes in the very sight of the supply," and to the failure and false leadership of "the rulers of the exchange of mankind's goods," the President proceeded:—

"Restoration calls, however, not for changes in ethics alone. This nation asks for action, and action now. Our greatest primary task is to put people to work. This is no unsolvable problem if we face it wisely and courageously. It can be accomplished in part by direct recruiting by the government itself, treating the task as we would treat the emergency of a war, but at the same time through this employment accomplishing greatly needed projects to stimulate and reorganize the use of our natural resources.

"Hand in hand with this we must frankly recognize the over-balance of population in our industrial centres, and by engaging on a national scale in a redistribution, endeavour to provide a better use of the land, for those best fitted for the task can be helped by definite efforts to raise the values of agricultural products and with this the power to purchase the output of our cities.

"It can be helped by preventing realistically the tragedy of the growing loss through foreclosure of our small homes and our farms.

"It can be helped by insistence that the federal, state and local governments act forthwith on the demand that their cost be drastically reduced.

"It can be helped by the unifying of relief activities, which to-day are often scattered, uneconomical and unequal.

"It can be helped by national planning for and supervision of all forms of transportation and of communications and other utilities which have a definitely public character. There are many ways in which it can be helped, but it can never be helped merely by talking about it. We must act and act quickly.

"Finally, in our progress toward a resumption of work, we require two safeguards against a return of the evils of the old order; there must be a strict supervision of all banking and credits and investments; there must be an end to speculation with other people's money, and there must be provision for an adequate but sound currency.

"These are the lines of attack. I shall presently urge upon a new Congress in special session detailed measures for their fulfilment, and I shall seek the immediate assistance of the several states."

## Old Age Pensions in United States

Mandatory laws providing for the payment of old-age pensions have been enacted in Indiana and Washington recently, according to the *Old Age Security Herald* of the American Association for Old Age Security for March (References to the progress of Old Age Pensions in the United States have been made in previous issues of the LABOUR GAZETTE, September, 1932, page 949; May, 1932, page 520, etc.). In three other states, Nevada, Oregon and Arizona, pension measures have been adopted by one house of the Legislature. No less than 123 bills have been introduced and are being discussed by Legislatures and legislative committees in thirty-four states.

At the same time the National Child Labour Committee reports a widespread revival of interest in minimum-wage legislation throughout the country. Seven states are listed in which minimum-wage bills for minors or for women and minors have already been presented to the Legislatures this winter. These states are Connecticut, Minnesota, New Mexico, New Hampshire, New York, Rhode Island and Utah. "The present economic

stress, with its resultant demand for cheap labour, has brought a return of working conditions similar to those existing fifty years ago," the committee reports; "sweat shops have sprung up in all of the eastern industrial states, and from every part of the country come reports of wages paid to women and minors averaging only \$3 to \$4 for a full week's work, and in many instances falling far below that rate."

In the fiscal year 1931-32 the expenditures in the United States for vocational education from Federal funds amounted to \$8,414,834, and from State and local funds, \$24,987,569, a total of \$33,402,403—an increase of \$1,259,211 over the preceding 12 months. The total enrollment in vocational schools and courses operated under State plans in the same year was 1,176,162, distributed as follows: 257,255 in agricultural schools, 579,591 in trade and industrial schools, and 339,316 in home economics schools. All the States were reported as being particularly interested in problems of training for the unemployed.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1933

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 7,956, the employees on their payrolls numbering 706,478 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,808, having an aggregate mem-

bership of 156,746 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of February, 1933, as Reported by Employers

Employment at the beginning of February, 1933, as on the same date in 1932, showed a decrease, according to data tabulated by the Dominion Bureau of Statistics from 7,956 firms whose payrolls aggregated 706,478 persons, compared with 720,448 on January 1. The index, based on the 1926 average as 100, declined from 78.5 in the preceding month to 76.8 on February 1, while on the same date in 1932 it stood at 89.7. At the beginning of February in the preceding eleven years, the index was as follows: 1931, 100.7; 1930, 111.6; 1929, 110.5; 1928, 102.0; 1927, 96.6; 1926, 91.8; 1925, 87.1; 1924, 91.7; 1923, 90.6; 1922, 79.9 and 1921, 91.2.

Important recovery was shown in manufacturing, especially of textile, iron and steel, leather, pulp and paper and lumber products. On the other hand, decided declines (largely seasonal in character) were noted in construction, especially in highway work, and in trade, transportation and mining. The losses in trade were unusually large, as the seasonal falling-off in buying following the Christmas activity became evident.

#### Employment by Economic Areas

Reductions were recorded in all provinces, those in Quebec being most pronounced.

*Maritime Provinces.*—Mining reported especially heavy losses in the Maritime Provinces, but decreases were also indicated in construction, manufacturing (particularly in food and iron and steel products), communications and

trade. On the other hand, improvement was shown in logging and transportation. Statistics were received from 573 firms, employing 53,419 workers, compared with 55,909 at the beginning of January. A rather larger falling-off had been recorded on the same date in 1932, when the level of employment was higher.

*Quebec.*—Increases in manufacturing (notably of lumber, leather, iron and steel and pulp and paper products), were offset by declines in logging, mining, transportation, trade and construction. The working forces of the 1,920 cooperating employers aggregated 204,196 persons, as against 209,778 in their last report. A decrease had also been noted on February 1, 1932, but the index was then higher.

*Ontario.*—Considerable gains were made in manufacturing, chiefly in the iron and steel, textile, leather, pulp and paper and lumber divisions; services, mining and logging also reported heightened activity, while there were large seasonal reductions in trade, transportation and construction. According to data received from 3,522 firms, their staffs declined from 295,215 at the beginning of January, to 293,734 on the date under review. A larger decrease had been indicated on February 1, 1932, when the volume of employment was greater than at the beginning of February of the present year.

*Prairie Provinces.*—The decrease in personnel reported by the firms making returns at the beginning of February was on a much larger scale than that noted on the same date

of last year, the workers released numbering more than twice those laid off on February 1, 1932. The index was lower than in the winter of last year. Statements were tabulated from 1,168 employers, whose staffs declined by 4,906 persons to 99,768 on the date under review. Logging was more active, and manufacturing also showed some improvement, while construction, transportation and trade were seasonally inactive.

*British Columbia.*—There was a contraction in employment on February 1; this took place mainly in construction, but logging, communications, services and trade also showed a falling-off. On the other hand, there was an improvement in manufacturing, and a small

and the adjacent Border Cities a slightly favourable tendency was in evidence.

*Montreal.*—Manufactures showed considerable recovery (especially in the footwear, iron and steel and edible product groups), while large seasonal losses were indicated in trade and transportation. On the whole, there was a decrease in Montreal, according to the data received from 1,094 firms employing 111,805 workers. A loss had also been recorded on February 1, 1932, when the index was higher.

*Quebec.*—Returns tabulated from 150 employers in Quebec City showed that they had decreased their staffs from 11,541 on January

#### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

increase also occurred in mining. The working forces of the 773 reporting firms aggregated 55,361, a decrease of 1,511 persons as compared with their staffs in the preceding month. A reduction had also been indicated on February 1, 1932, but the index was then many points higher.

Index numbers of employment by economic areas are given in Table I.

#### Employment by Cities

The trend of employment was downward in Montreal, Quebec, Toronto, Ottawa, Winnipeg and Vancouver, while in Hamilton, Windsor

1 to 11,121 persons at the beginning of February, the index falling from 92.6 on January 1 to 88.9 on the date under review. Manufacturers reported little general change, although there was a slight improvement in boot and shoe factories. Trade, on the other hand, was seasonally dull. The index was lower than on the corresponding date of last year, although employment had then also shown a reduction.

*Toronto.*—Heavy seasonal losses took place in trade, and construction was also slacker, but there were important gains in manufacturing, especially of textile and vegetable food

products. The result was a decrease of 3,274 in the number employed by the 1,202 co-operating firms who had 101,427 employees. This decrease was similar to that indicated on February 1 of a year ago, but the level of employment was then higher.

*Ottawa.*—There were moderate declines in manufacturing, transportation and trade in Ottawa; 151 employers had 10,883 workers, or 139 fewer than on January 1. Employment was in smaller volume than at the beginning of February, 1932, when the reduction recorded was smaller.

*Hamilton.*—Employment in Hamilton showed a slight increase, mainly in the manufacturing group, in which large gains were shown by iron and steel plants. There were losses of a

seasonal character in construction and trade. Statistics were tabulated from 233 firms employing 22,121 persons, compared with 21,971 in the preceding month. The index was many points lower than on February 1 of a year ago, but a decrease had then been reported.

*Windsor and the adjacent Border Cities.*—Considerable recovery was indicated in automobile factories, and there were also increases in construction, services and trade, resulting in a generally improved situation in the Border Cities. The 129 co-operating firms reported 8,605 workers, as against 8,099 on January 1. Activity was not so great as on the same date in 1932; the trend then, however, had been downward.

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

| Relative Weight of Employment by Economic<br>Areas as at February 1, 1933..... | 100.0  | 7.6                   | 28.9   | 41.6    | 14.1                 | 7.8                 |

**Winnipeg.**—The number employed in Winnipeg showed a contraction, mainly in construction and transportation. Returns were compiled from 391 firms with 32,468 employees, compared with 33,561 in the preceding month. Employment was not so active as at the beginning of February of last year, when curtailment had also been indicated.

**Vancouver.**—The manufacturing, construction and trade groups reported reduced employment, but transportation was brisker. The 344 reporting firms employed 25,078 persons, as against 25,425 on January 1. The index was lower than on the same date in 1932, when improvement had been reported.

Index numbers of employment by cities are given in Table II.

### Manufacturing

The revival in factory employment was not so marked as on February 1, 1932, when the index was higher than on the date under review. Statements were tabulated from 4,896 manufacturers employing 371,924 operatives, compared with 368,994 in the preceding month. The most noteworthy recovery took place in the iron and steel and textile industries; within the former group, the automobile and other land vehicle, agricultural implement and iron pipe divisions showed the largest advances, while in the latter, garment and personal furnishing, cotton, woollen and silk and headwear factories reported especially pronounced improvement. The lumber, leather and pulp and paper divisions also registered important

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

| Relative Weight of<br>Employment by<br>Cities as at Feb. 1,<br>1933..... | 15.8     | 1.6    | 14.4    | 1.5    | 3.1      | 1.2     | 4.6      | 3.5       |

gains, while there were losses in food, rubber, electric current and some other plants.

*Animal Products—Edible.*—There was a further decline in employment in this group at the beginning of February; the reduction involved practically the same number of workers as that noted on the corresponding date last year, when the index was four points higher. Statements were tabulated from 216 firms employing 15,981 workers, as compared with 16,689 in the preceding month. Meat-preserving plants reported the greatest losses.

*Leather and Products.*—Employment in boot and shoe factories showed a large increase, but was not quite so active as on the corresponding date of a year ago, when gains had also

been noted. A combined working force of 16,673 persons was reported by the 255 co-operating manufacturers, who had 15,792 employees at the beginning of January. Most of the advance took place in Quebec and Ontario.

*Lumber and Products.*—Improvement was indicated in sawmills and in wood-turning and carving, container and other lumber-using factories; 413 workers were taken on by the 761 firms making returns, who had 22,964 on their staffs. This increase was smaller than that registered at the beginning of February, 1932, when employment was in greater volume. The gains in Quebec were most extensive.

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(AVERAGE CALENDAR YEAR 1926=100)

|  | All industries | Manufacturing | Logging | Mining | Communications | Transportation | Construction | Services | Trade |
|--|----------------|---------------|---------|--------|----------------|----------------|--------------|----------|-------|
| Feb. 1, 1921.....  | 91.2           | 91.8          | 170.2   | 100.2  | 89.9           | 93.5           | 61.4         | 78.7     | 91.8  |

| Relative weight of employment by industries, as at February 1, 1933..... | 100.0          | 52.7          | 2.6     | 6.0    | 3.2            | 12.5           | 8.9          | 2.9      | 11.2  |

*Plant Products, Edible.*—There was an improvement in the vegetable food group, according to the 388 reporting establishments, which employed 25,535 workers, compared with 25,175 in the preceding month. Canneries showed small seasonal losses, while bread and bakery products and chocolate and confec-

tionary factories showed an increase in the number of employees. A considerable decline had been reported on February 1 of last year; the index then stood at 91.1, as compared with 89.8 on the date under review.

*Pulp and Paper.*—Pulp and paper mills were somewhat busier, and paper product factories

<sup>1</sup> The "relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

reported considerable gains. The index was over five points lower than on February 1, 1932, when losses had been recorded. Data were received from 553 employers of 50,077 workers, as against 49,632 at the beginning of January, 1933. Most of the improvement took place in Ontario and Quebec.

*Rubber Products.*—Contractions were indicated in rubber factories, 43 of which reduced their payrolls from 9,659 on January 1 to 9,203 on February 1. The index was many points lower than on the same date in 1932.

*Textile Products.*—The advance in employment in the co-operating factories was not so large as on February 1, 1932, when activity was generally greater than on the date under review. Silk, woollen, headwear, garment and personal furnishing establishments registered important increases in personnel. The working force of the 854 co-operating firms aggregated 75,640 persons, as compared with 74,870 in their last report. Ontario, the Prairie Provinces and British Columbia showed improvement.

*Tobacco, Distilled and Malt Liquors.*—There was a further curtailment in employment in this division, the reductions in tobacco works being most pronounced. Employment was rather slacker than on February 1 a year ago. Returns for the beginning of February in the present year were tabulated from 152 manufacturers with 14,537 employees, or 831 fewer than in their last report.

*Chemicals and Allied Products.*—Statements were compiled from 143 firms in this group, whose staffs aggregated 7,703 as compared with 7,533 at the beginning of January. Employment was not so active as in the winter of 1932.

*Clay, Glass and Stone Products.*—Very little general change was recorded in this group on the date under review, according to 176 manufacturers, whose labour forces included 5,260 workers. Employment was slacker than on February 1, 1932, although losses had then been indicated.

*Electric Current.*—Continued curtailment was reported in electric current plants at the beginning of February, when the 92 co-operating manufacturers reported 13,131 employees, compared with 13,324 at the beginning of January. Activity was less than on February 1 of last year, when greater declines had taken place.

*Electrical Appliances.*—Employment in electrical appliance works showed a recession, while the index was many points lower than on the same date a year ago. Data were received from 89 establishments, employing 9,557 operatives, as against 10,200 on January 1, 1933.

*Iron and steel Products.*—There were large increases in employment in iron and steel factories, the recovery being most noteworthy in automobile and other land vehicle works, while the agricultural implement, iron pipe, tool manufacture and some other groups were also busier. On the other hand, thermal welding and heating appliance factories were slacker. The improvement in Ontario was most pronounced, but the trend was generally upward, except in the Maritime Provinces. Statistics were tabulated from 760 firms, whose staffs stood at 76,061, compared with 73,501 on January 1. The index was lower than on the corresponding date of last year, when greater advances had been indicated.

*Non-ferrous Metal Products.*—Smelting and refining, lead, tin, zinc, copper and precious metal works recorded heightened activity, but the aluminium products group was slacker. The gain in the group as a whole was greater than on February 1, 1932; however the index was then many points higher. The working force of the 126 co-operating manufacturers included 11,856 employees, or 327 more than at the beginning of January. The increase took place largely in Ontario, while in Quebec reductions were noted.

*Mineral Products.*—One hundred and ten establishments in the mineral products group reported 11,524 workers, as compared with 11,467 in the preceding month. Activity on the whole was slightly greater than at mid-winter in 1932, when curtailment had been indicated.

### Logging

A large reduction was recorded in logging, in which employment was practically the same as on February 1 of 1932; but was slacker than in most of the earlier years of the record. Statements were received from 231 operators employing 18,540 workers, as against 20,486 on January 1. The trend of employment was downward in Quebec and British Columbia, while elsewhere the movement was favourable.

### Mining

Coal and other non-metallic minerals showed decreased employment, while metallic ore mines were busier. On the whole, there was a decline of 1,299 persons in the forces of the operators furnishing returns, who numbered 224. Their staffs aggregated 42,454 employees, of whom 23,031 were engaged in the mining of coal, 15,692 in metallic ores and 3,731 in non-metallic minerals, other than coal. A slightly smaller loss had been indicated on February 1, 1932, when the index was higher than on the date under review.

### Communications

The working force of the companies and branches reporting stood at 22,564 persons, compared with 23,026 in the preceding month, most of the reduction taking place in telephones. The number employed was not so great as on the same date in 1932, when losses were also recorded.

### Transportation

*Street Railways and Cartage.*—There was a downward trend in employment in this division on February 1, although the index was higher than on the same date in 1932. The 176 co-operating employers had 23,831 persons on their payrolls, or 420 fewer than in the preceding month. Ontario and the Prairie Provinces registered most of the decline.

*Steam Railway.*—Seasonal contractions involving a rather larger number of workers than on February 1 a year ago, were noted in steam railway operation, in which employment was at a lower level than on the same date of last year. Returns were compiled from 100 companies and branches in this group, whose staffs aggregated 54,521 persons, as compared with 56,988 on January 1. There were large reductions in Ontario and the Prairie Provinces, while the movement was seasonally upward in the Maritime Provinces.

*Shipping and Stevedoring.*—Employment in water transportation showed a falling-off; 89 employers released 1,085 workers from their payrolls, bringing them to 10,179 on the date under review. The index was lower than on February 1, 1932.

### Construction and Maintenance

*Building.*—Employment in building construction decreased on February 1, as is customary at midwinter. The index was lower than at the beginning of February of 1932, although the losses then recorded had been very much larger. Statistics were received from 618 contractors, with 11,407 persons in their employ on the date under review as against 11,914 on January 1. The greatest contractions were in Ontario and the Maritime Provinces, while the tendency was upward in British Columbia.

*Highway.*—The number of persons employed by 310 employers in the highway construction

and maintenance group was 30,955, or 2,846 fewer than in the preceding month. The losses in the Prairie Provinces and British Columbia were especially pronounced, while Ontario showed an improvement. Due to the public unemployment relief works undertaken on a large scale throughout the Dominion during the winter of 1932, the index was very much higher than on February 1 of the present year.

*Railway.*—Considerable curtailment was noted in railway construction and maintenance; a larger decline had been recorded on the same date in 1932, when the index was higher. Statements were tabulated from 34 employers in this group, with 20,378 persons on their payrolls, as compared with 21,453 in the last report. Decreases in personnel were registered in all provinces, the greatest decline being in Ontario.

### Services

Employment in services was more active than in the preceding month; 313 establishments had 20,507 employees, or 434 more than on January 1. The index was lower than on February 1 of last year, when a decline had been noted in this group.

### Trade

Following the heightened activity resulting from the Christmas and holiday season, there was a considerable falling-off in the number employed in trade on February 1. The losses were on a slightly larger scale than those noted on the same date in 1932 and the index of employment was then higher. The 882 trading establishments furnishing data reduced their payrolls from 86,445 employees on January 1, 1933 to 79,218 at the beginning of February. There were general decreases, mainly in retail stores, but wholesalers were also slacker.

### TABLES

Index number of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on February 1, 1933.

## (2) Unemployment in Trade Unions at the Close of January, 1933

Unemployment as used in the following article refers to involuntary idleness due to economic conditions. Persons who are engaged at work other than their own trades or who are idle through illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making

returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

No change was manifest in the local trade union situation as a whole, during January

from the preceding month, the percentage of idleness again standing at 25.5. Fluctuations, however, were apparent in the various provinces and industries. The percentage for January was based on the reports furnished to the Department by 1,808 labour organizations, covering a membership of 156,746 persons, 39,909 of whom were idle on the last day of the month. Nova Scotia unions reported a sharp drop in employment from December, due largely to the inclusion of a union which had not reported for several months and which indicated very slack conditions among its members. In Manitoba and Saskatchewan curtailment on a much smaller scale was noted, activity for Ontario unions

in January a year ago and in New Brunswick and British Columbia fractional improvement only was registered.

Each month the reports received from the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these, Toronto and Winnipeg unions alone reported a reduction in the labour volume available during January from the previous month, the situation in all other cities tending favourably. Montreal, with a gain of over 5 per cent, largely attributable to more active conditions in the garment trades of that city, showed the most substantial improvement, followed by Vancouver, with an increase of almost 4 per cent. Height-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

being but nominally retarded. On the other hand, both Quebec and British Columbia unions reported employment expansion of around 4 per cent and in New Brunswick and Alberta the tendency was also favourable, though the change was less than 1 per cent. Compared with the situation in January, 1932, when 22.0 per cent of the members reported were without employment, Ontario and Nova Scotia unions recorded severe losses in available employment during the month reviewed, Manitoba, Saskatchewan, and Alberta unions also showing declines of more moderate proportions. Quebec unions, however, were afforded a slightly better volume of work than

ened employment on a more moderate scale was reflected by Halifax, Regina and Edmonton unions, St. John unions showing but fractional improvement. In Winnipeg, however, the drop in activity recorded was over 3 per cent, while Toronto unions reported a decline of 1 per cent. Compared with the situation in January, 1932, St. John, Halifax and Montreal unions all indicated a higher level of activity during the month reviewed, the gains from St. John being substantial. On the contrary, Toronto unions showed a large falling off in available work from January a year ago and in Edmonton and Winnipeg also recessions of note-worthy proportions

occurred. Declines of somewhat lesser degree were reflected by Regina and Vancouver unions.

The chart accompanying this article illustrates the unemployment trend by months from January, 1927, to date. At the close of January, 1933, the curve rested at exactly the same level as in the previous month, showing an unchanged volume of activity. The point reached by the curve at the close of the month under review was, however, somewhat above that of January last year and indicative of a moderate increase in slackness.

In the manufacturing industries as a whole, little change in conditions was shown during January from the previous month, the percentage of idleness standing at 29.6 in contrast with 28.9 per cent in December. For January, reports were tabulated from 485 unions in the manufacturing industries, with a total of 44,447 members, 13,153 of whom were without employment on the last day of the month. Unemployment was, however, in greater prevalence than in January, 1932, when 21.4 per cent of idleness was recorded. A decidedly better situation than in December was reflected in the garment trades, supplemented by improvement on a smaller scale, among hat and cap, wood and glass workers, pulp and paper makers and general labourers. On the other hand, employment for iron and steel workers showed a pronounced decline. Textile and fur workers also indicated extensive percentage contractions in activity which, however, affected few workers and declines of lesser magnitude occurred for cigar makers, brewery workers, bakers and confectioners, printing tradesmen and leather workers. Compared with the situation in January, 1932, the garment trades, as in previous comparison, showed substantially improved conditions during the month reviewed and among wood workers and general labourers also employment was on a much higher level. Of the contractions reported, those indicated by iron and steel workers were particularly extensive and affected a large number of workers, cigar makers, textile and fur workers also showing pronounced increases in slackness, though of secondary importance when compared with the iron and steel trades. Pulp and paper makers also, reported noteworthy curtailment of activity from January, 1932, as did printing tradesmen and bakers and confectioners. Among brewery, glass and leather workers slight adverse changes only occurred.

The coal mining situation remained much the same in January as in December, the tendency, however, being towards a lowering of the employment volume. This was manifest by the returns received for January from a total of 47 unions, with 13,094 members, 1,131 or 8.6 per cent of whom were idle on the last

day of the month, contrasted with 8.3 per cent of inactivity in December. British Columbia coal fields absorbed a slightly greater number of workers than in December, while in Alberta conditions remained approximately unchanged,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N.S. and Prince Edward Island | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Canada |
|-------------------|-------------------------------|---------------|--------|---------|----------|--------------|---------|------------------|--------|
| Average 1919..... | 3.1                           | 2.0           | 3.4    | 2.7     | 2.1      | 3.2          | 2.0     | 7.9              | 3.4    |
| Average 1920..... | 1.8                           | 2.0           | 7.2    | 3.4     | 2.1      | 3.2          | 2.8     | 11.2             | 4.9    |
| Average 1921..... | 11.3                          | 8.5           | 16.6   | 9.7     | 8.5      | 7.8          | 7.8     | 23.5             | 12.7   |
| Average 1922..... | 7.1                           | 4.3           | 8.6    | 5.0     | 8.9      | 5.4          | 6.1     | 12.4             | 7.1    |
| Average 1923..... | 3.0                           | 2.0           | 6.7    | 3.7     | 5.8      | 3.0          | 6.0     | 5.8              | 4.9    |
| Average 1924..... | 5.1                           | 4.0           | 10.9   | 6.1     | 6.5      | 4.3          | 6.0     | 5.8              | 7.0    |
| Average 1925..... | 5.0                           | 3.6           | 10.9   | 5.5     | 5.1      | 3.3          | 8.4     | 5.7              | 7.0    |
| Average 1926..... | 7.8                           | 2.1           | 6.8    | 4.2     | 3.6      | 3.0          | 4.9     | 5.5              | 5.1    |
| Average 1927..... | 3.7                           | 1.9           | 6.8    | 4.1     | 4.4      | 3.2          | 4.1     | 5.5              | 4.9    |
| Average 1928..... | 4.0                           | 1.2           | 6.1    | 3.5     | 4.2      | 3.0          | 4.2     | 5.1              | 4.5    |
| Average 1929..... | 4.0                           | 1.6           | 7.7    | 4.3     | 7.1      | 5.3          | 6.4     | 5.9              | 5.7    |
| Average 1930..... | 5.4                           | 3.7           | 14.0   | 10.4    | 9.6      | 10.6         | 13.3    | 11.6             | 11.1   |
| Average 1931..... | 8.5                           | 9.2           | 19.3   | 17.2    | 15.7     | 15.6         | 19.4    | 17.6             | 16.8   |
| Average 1932..... | 9.6                           | 14.4          | 26.4   | 23.7    | 20.0     | 15.8         | 22.6    | 21.6             | 22.0   |
| Jan., 1919.....   | 1.3                           | 0.8           | 3.9    | 4.6     | 3.6      | 5.7          | 2.0     | 5.1              | 3.9    |
| Jan., 1920.....   | 2.7                           | 4.0           | 3.4    | 2.7     | 4.5      | 4.9          | 4.0     | 11.8             | 4.0    |
| Jan., 1921.....   | 5.9                           | 8.1           | 13.3   | 14.2    | 8.8      | 10.1         | 9.7     | 21.6             | 13.1   |

Nova Scotia unions showing a drop in employment of less than 1 per cent. Coal mining on the whole showed a higher level of activity than in January, 1932, when 12.3 per cent of idleness was recorded, the improvement being entirely confined to the coal fields of Nova Scotia. On the other hand, there was a considerable lessening of the employment volume afforded in the British Columbia mines during the month reviewed and activity for Alberta miners showed noteworthy declines. Short time work, however, continued prevalent in both the eastern and the western coal areas.

The 245 unions of building tradesmen making returns at the close of January, with an aggregate of 19,758 members, showed that 13,711 were without work, a percentage of 69.4, compared with percentages of 69.2 in December and 63.8 in January, 1932. Bridge and structural iron workers, whose returns comprised but a small proportion of the total membership reported in the building trades, showed a substantially better situation from December, bricklayers, masons and plasterers indicating moderate improvement in conditions, with slight gains reported from painters, decorators and paperhangers, and plumbers and steamfitters. On the contrary, tile layers, lathers and roofers, and hod carriers and building labourers reported large percentage increases in slackness involving few workers however. Employment for carpenters and joiners and electrical workers was also somewhat retarded, while among granite and stone-cutters recessions on a small scale were recorded. Painters, decorators and paperhangers and electrical workers were afforded considerably more work than in January, 1932, and among bridge and structural iron workers some employment advancement was noted. On the other hand, granite and stone cutters, tile layers, lathers and roofers, and hod carriers and building labourers reported pronounced increases in slackness from January of last year and activity for bricklayers, masons and plasterers, plumbers and steamfitters and carpenters and joiners was also largely curtailed.

Practically the same level of activity was maintained in the transportation industries as a whole, during January as in the preceding month, the 781 unions making returns with a membership aggregate of 57,251 persons showing 15.6 per cent of unemployment, compared with a percentage of 15.5 in December. Steam railway employees, whose returns constituted about 81 per cent of the entire group membership reported, showed a fractional drop in activity from December, as did also street and electric railway employees. A substantial improvement, however, was recorded by navigation workers, while teamsters and chauffeurs maintained an unchanged situation from December. Moderate declines in employment were reported in the transportation industries from January, 1932, when 13.2 per cent of idleness was registered, navigation workers, as in the previous comparison, showing employment expansion on a noteworthy scale, while among teamsters and chauffeurs a somewhat better situation obtained, which the curtailment evident among steam and street and electrical railway employees was more than sufficient to offset.

Retail clerks were less busily engaged during January than in December, as shown by the reports tabulated from 5 associations with

1,080 members. Of these, a percentage of 5.5 were reported idle on the last day of the month, contrasted with 0.7 per cent in December. In January of last year 4.5 per cent of the members included in the returns were without work.

Civic employees reported a less favourable situation during January than in either the previous month or January, 1932, the 78 unions from which returns were tabulated, with a total membership of 7,562 persons, showing 9.0 per cent of idleness in contrast with percentages of 6.3 in December and 2.1 at the end of January last year.

Improvement on a small scale was indicated in the miscellaneous group of trades during January from December, the unemployment percentage standing at 18.6 in contrast with 20.0 per cent at the close of the previous month. The January percentage was based on the reports received from 118 unions in the miscellaneous group of trades, with a total of 4,191 members. The situation was also slightly more favourable than in January, 1932, when 19.5 per cent of the members reported were idle. Stationary engineers and firemen, and unclassified workers were responsible for the better employment trend shown from December, while among hotel and restaurant, and theatre and stage employees, and barbers a slowing up of activity was noted. Unclassified workers, barbers and stationary engineers and firemen all shared in the favourable employment movement shown from January, 1932. Conditions for theatre and stage, and hotel and restaurant employees were, however, slacker than in January a year ago.

Fishermen were considerably better employed during January than in December, the two unions reporting with a membership of 730 persons showing 13.7 per cent of idleness, contrasted with 28.4 per cent in the previous month. A higher level of activity also prevailed than in January, 1932, when 21.7 per cent of unemployed members was reported.

The 3 unions of lumber workers and loggers from which reports were tabulated in January, with a membership of 611 persons, showed that 140, or 22.9 per cent, were without employment on the last day of the month, in comparison with 51.9 per cent in December and 24.0 per cent in January, 1932.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932, inclusive, and also the percentage of unemployment by provinces for January of each year from 1919 to 1930, inclusive, and for each month from January, 1931, to date. Table II summarizes returns in the various groups of industries for the same months as in Table I.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

| Month           | Fishing | Lumbering and logging | Mining | Manufacturing industries | Vegetable products | Pulp and paper products | Pulp and paper mill workers | Printing, publishing and lithographing | Electric current | Wood products | Fibres, textiles and textile workers | Garment workers | Hat, cap and glove workers | Animal products | Iron and its products | Non-ferrous metals | Clay, glass and stone products | Mineral products | Miscellaneous manufacturing industries | Building and construction | Transportation | Shipping and stevedoring | Local transportation | Communication | Telegraph operation | Telephone operation | Trade (retail shop clerks) | Services | Governmental | Miscellaneous | All occupations |      |
|-----------------|---------|-----------------------|--------|--------------------------|--------------------|-------------------------|-----------------------------|--|------------------|---------------|--------------------------------------|-----------------|----------------------------|-----------------|-----------------------|--------------------|--------------------------------|------------------|--|---------------------------|----------------|--------------------------|----------------------|---------------|---------------------|---------------------|----------------------------|----------|--------------|---------------|-----------------|------|

### (3) Employment Office Reports for January, 1933

During the month of January, 1933, the volume of business, as shown by the average daily placements effected by the Offices of the Employment Service of Canada, was nearly 3 per cent less than that transacted during the previous month, and over 11 per cent below that of the corresponding period a year ago. In comparison with December, all groups except farming and construction and maintenance showed declines, the largest loss taking place in services and the higher gain in construction and maintenance, the change in farming being nominal only. When compared with January last year, the decrease was largely attributable to fewer placements effected in

relation to applications declined sharply during the first half of the month, but showed an upward trend during the latter half of the period under review, although in both instances the ratios of vacancies and placements to applications were lower than those shown during January last year. The ratio of vacancies to each 100 applications was 48.1 and 52.2 during the first and the second half of January, 1933, in comparison with ratios of 52.6 and 56.9 during the same periods of 1932. The ratio of placements to each 100 applications during the periods under review were 45.3 and 50.3, as compared with 51.0 and 55.6 during the corresponding month a year ago.

#### POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ————— Vacancies - - - - - Placements o—o—o—o—o—o

construction and maintenance, although losses also occurred in manufacturing, mining, transportation and logging. A substantial gain was recorded in farming, due to placements made under the Farm Relief Act but this, together with an increase in services, only partly offset the declines reported in the aforementioned groups.

The accompanying chart shows the trend of employment since January, 1931, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph, that the curves of vacancies and placements in

The average number of vacancies reported daily by employers to the offices throughout Canada during January, 1933, was 1,145, as compared with 1,188 during the preceding month and with 1,262 for January, 1932.

The average number of applications for employment received daily by the Offices during the month under review was 2,275, in comparison with 1,913 in December and with 2,311 during January last year.

The average number of placements made daily by the Offices of the Service during January, 1933, was 1,093, of which 499 were in regular employment and 594 in work of one week's duration or less, as compared with a total daily average of 1,123 during the pre-

ceding month. Placements in January a year ago averaged 1,229 daily, consisting of 483 in regular and 746 in casual employment.

During the month of January, 1933, the Offices of the Service referred 28,767 persons to vacancies and effected a total of 27,304 placements. Of these, the placements in regular employment were 12,456, of which 9,181 were of men and 3,275 of women, while placements in casual work totalled 14,848. The number of vacancies reported by employers was 22,154 for men and 6,448 for women, a total of 28,602, while applications for work numbered 56,873, of which 43,752 were from men and 13,121 from women.

The following table gives the placements effected by the Offices of the Employment Service of Canada, each year, from January, 1923, to date:—

| Year                | Placements |         |         |
|---------------------|------------|---------|---------|
|                     | Regular    | Casual  | Totals  |
| 1923.....           | 347,165    | 115,387 | 462,552 |
| 1924.....           | 247,425    | 118,707 | 366,132 |

#### NOVA SCOTIA

There was a gain of nearly 42 per cent in the number of positions offered through employment offices in Nova Scotia during January when compared with the preceding month and of 670 per cent when compared with the corresponding month of last year. Placements also were 41 per cent higher than in December and 687 per cent above January, 1932. The substantial increase in placements over January of last year was entirely due to work provided in relief of unemployment on highway construction. During the month 4,230 placements were made under construction and maintenance and 237 in the services group. Of the latter, 180 were of household workers. Placements in regular employment numbered 55 of men and 60 of women.

#### NEW BRUNSWICK

The demand for workers as indicated by orders received at employment offices in New Brunswick during January was 11 per cent greater than in the preceding month and 161 per cent above the corresponding month of last year. There was an increase of 11 per cent in placements when compared with December and of 163 per cent in comparison with January, 1932. The large gain in place-

ments over January of last year was attributable to relief work on highway construction. There were 1,183 placements under construction and maintenance and 357 in services. Of the latter, 273 were of household workers. During the month 51 men and 64 women were placed in regular employment.

#### QUEBEC

During January, employment offices in the Province of Quebec received orders for nearly 6 per cent less workers than in the preceding month, but 84 per cent in excess of the corresponding month of last year. There was a decline of nearly 2 per cent in placements when compared with December, but a gain of over 52 per cent in comparison with January, 1932. All industrial divisions except manufacturing, farming and mining participated in the increase in placements over January of last year, services showing the largest gain. Placements by industrial divisions included: manufacturing, 51; logging, 55; construction and maintenance, 116; trade, 81; and services, 1,155, of which 1,057 were of household workers. There were 377 men and 898 women placed in regular employment during the month.

#### ONTARIO

Orders received at Ontario employment offices during January called for nearly 20 per cent less workers than in the preceding month and nearly 48 per cent fewer than during the corresponding month of last year. There was a decline of over 20 per cent in placements when compared with December, and of nearly 49 per cent in comparison with January, 1932. The large decline in placements from January of last year was due to the provision of direct relief in place of work on highway construction, the reduction in placements in this group being greater than the net loss for the province as a whole. Gains were reported in logging, services, trade, and farming, and losses in manufacturing and finance. Placements by industrial divisions included: manufacturing, 353; logging, 711; farming, 273; transportation, 47; construction and maintenance, 3,745; trade, 348; and services, 3,027, of which 1,559 were of household workers. There were 2,444 men and 1,036 women placed in regular employment.

#### MANITOBA

Opportunities for employment, as indicated by orders received through employment offices in Manitoba during January, were nearly 9 per cent less than in the preceding month and over 28 per cent below the corresponding month of last year. There was a decline also in placements of over 11 per cent when compared with December and of nearly 31 per

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF JANUARY, 1933

\* 387 placements effected by offices since closed.

cent in comparison with January, 1932. Fewer placements on highway construction than during January of last year were responsible for the decline under this comparison. Losses were, however, also reported in logging, manufacturing, services, and trade. There was a substantial gain in farm placements under the Farm Relief plan. Placements by industrial divisions included: logging, 175; farming, 1,063; construction and maintenance, 819; and services, 782, of which 561 were of household workers. Placements in regular employment numbered 1,681 of men and 343 of women.

#### SASKATCHEWAN

There was a decline of over 9 per cent in the number of positions offered in the employment offices in Saskatchewan during January when compared with the preceding month but a gain of nearly 88 per cent when compared with the corresponding month of last year. Placements were 2 per cent less than in December, but 102 per cent above January, 1932. Heavy placements under the Farm Relief Act were mainly responsible for the gain over January of last year, although increases were also reported in construction and maintenance, services, and manufacturing. There were small losses in logging, transportation and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 63; farming, 2,155; construction and maintenance, 779; trade, 40; and services, 723, of which 589 were of household workers. During the month 2,757 men and 485 women were placed in regular employment.

#### ALBERTA

Employment opportunities, as indicated by orders received at employment offices in Alberta during January, were nearly 5 per cent less favourable than in the preceding month and 50 per cent below the corresponding month of last year. There was a decline in placements of over 3 per cent when compared with December and of 50 per cent in comparison with January, 1932. A large reduction in placements on highway construction was mainly responsible for the decline from January of last year, augmented by losses in services, mining, trade and logging. The only group to show any gain of importance was farming, where a considerable number of workers had been placed under the Farm Relief Act. Placements by industrial divisions included: logging, 106; farming, 496; construction and maintenance, 744; and services, 344, of which 297 were of household workers. There were 889 men and 219 women placed in regular employment.

#### BRITISH COLUMBIA

During January, positions offered through employment offices in British Columbia were over 19 per cent less than in the preceding month, but nearly 21 per cent in excess of the corresponding month of last year. Similar percentages of change were reported in placements under both comparisons. The gain in placements over January, 1932, was due to relief work on road construction, although services also showed improvement. These gains were offset, in part, by minor losses in manufacturing, transportation, trade, and logging. There were 2,111 placements under construction and maintenance, and 600 in services. Of the latter, 359 were of household workers. During the month 927 men and 170 women were placed in regular employment.

#### Movement of Labour

During the month of January, 1933, the offices of the Employment Service of Canada made 12,456 placements in regular employment, 6,241 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter 335 were granted the Employment Service reduced transportation rate, 243 going to centres within the same province as the despatching office and 92 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Persons benefiting by the reduced rate in Quebec during January numbered 16, all bushmen, these securing their certificates at the Quebec City office for transportation to centres within the same zone. In Ontario the labour movement was entirely provincial during January and comprised the transfer of 151 workers. Travelling from Port Arthur to employment within its own zone were 39 bushmen, 4 cookees, 1 construction labourer, and 1 restaurant chore man, this zone also being the destination of 3 miners sent from Timmins and one bushman from Toronto. To points within their respective zones Fort William despatched 34 bushmen and Sudbury 21 bushmen. The Timmins zone received 45 loggers from North Bay and 1 carpenter from Pembroke. The remaining transfer was of a machinist who journeyed from Windsor to St. Catharines. Manitoba offices granted 106 certificates for reduced transportation during January, 16 of which were provincial and 90 interprovincial. All of these were issued at

the Winnipeg office, which was instrumental in the transfer of 5 farm hands, 1 farm housekeeper, 4 mine workers, 5 bushworkers and 1 hotel chambermaid within its own zone. Of the workers going outside the province 88 travelled to points within the Port Arthur zone and included 85 bushworkers, 2 miners and 1 highway construction worker. In addition, 2 farm hands were sent to Swift Current. Saskatchewan transfers at the reduced rate in January numbered 6, all provincial, 4 of which were of teachers travelling from Regina, one each directed to the Weyburn and Swift Current zones and 2 to employment within the Regina zone. The remaining transfers were of farm hands, one travelling from Moose Jaw to a point within the same zone and one from Regina to North Battleford. Alberta offices despatched 43 workers at the reduced rate in January, all of whom went to employment within the Edmonton zone. Included in these were 30 bushmen, 2 farm

hands, 2 farm household workers, 6 miners, and 2 town housekeepers, who received their certificates for transportation at the Edmonton office, and one town housekeeper travelling from Calgary. From British Columbia centres 13 persons were transferred at the reduced rate in January, 11 of whom went to provincial employment and 2 outside the province. The latter were a farm hand and a farm domestic bound for the Prince Albert zone, and travelling from Kamloops. Within the province the movement was from Vancouver, 6 mine workers, 3 fur trappers and 1 hotel cook going to points within the Vancouver zone and 1 saw filer to Nelson.

Of the 335 workers who profited by the Employment Service reduced transportation rate during January, 157 travelled by the Canadian National Railways, 121 by the Canadian Pacific Railway, 48 by the Temiskaming and Northern Ontario Railway and 9 by the Pacific Great Eastern Railway.

#### (4) Building Permits issued in Canada in January, 1933

There was a seasonal decline in the value of the building permits issued by 61 cities during January as compared with the preceding month, and the total was also lower than in January, 1932; the co-operating municipalities reported permits for buildings estimated to cost \$1,163,878, compared with \$1,480,731 in December, 1932, and \$2,761,929 in January of last year. There was, therefore, a reduction of 21.4 per cent in the first and of 57.9 per cent in the second comparison.

Some 50 cities furnished detailed statements, showing that they had granted some 90 permits for dwellings valued at about \$240,000, and nearly 600 permits for other buildings estimated to cost approximately \$640,000. In December, authority was granted for the erection of some 100 dwellings and 600 other buildings, estimated to cost approximately \$350,000 and \$900,000 respectively.

Quebec, Saskatchewan, Alberta and British Columbia reported increases in the value of the building authorized during January as compared with December, 1932, the gain of \$254,981 or 1143.1 per cent in Saskatchewan and of \$96,362, or 64.1 per cent in British Columbia being most noteworthy. A particularly large increase in Saskatchewan was due to the issue of a \$243,000 permit for the Canadian Pacific Railway station at Regina. Of the declines elsewhere recorded, that of \$622,881, or 66.3 per cent in Ontario was greatest.

As compared with January, 1932, Saskatchewan alone showed an increase. Reductions were reported in the remaining provinces, that of \$737,077 or 70.0 per cent in Ontario being most pronounced.

In Toronto, there were decreases in the value of the building permits granted as compared with both the preceding month and the same month of last year, while in Montreal, Winnipeg and Vancouver, the January total was higher than in December, but lower than in January, 1932. The following cities reported increases in both comparisons—Galt, Niagara Falls, Peterborough, Regina, St. Thomas, Sarnia, Victoria, Welland and Windsor.

*Record for January in the years 1920-1933.*—The following table gives the value of the building authorized by 61 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given (1926=100):

| Year      | Value of permits issued in January | Indexes of value of permits issued in January (1926=100) | Indexes of wholesale prices of building materials in January (1926 average=100) |
|-----------|------------------------------------|--|---|
|           | \$                                 |  |   |
| 1933..... | 1,163,878                          | 24.7   | 75.8  |
| 1932..... | 2,761,929                          | 58.5   | 79.5  |
| 1931..... | 8,401,456                          | 178.0  | 84.1  |
| 1930..... | 7,217,397                          | 152.9  | 97.3  |
| 1929..... | 8,416,880                          | 178.3  | 98.0  |
| 1928..... | 7,716,587                          | 163.5  | 95.2  |
| 1927..... | 5,676,537                          | 120.3  | 96.3  |
| 1926..... | 4,719,534                          | 100.0  | 102.3   |
| 1925..... | 5,447,270                          | 115.4  | 101.9   |
| 1924..... | 4,460,579                          | 94.5   | 112.4   |
| 1923..... | 4,139,498                          | 87.7   | 109.8   |
| 1922..... | 3,326,537                          | 70.5   | 109.3   |
| 1921..... | 2,595,564                          | 55.0   | 143.0   |
| 1920..... | 4,017,024                          | 85.1   | 134.5   |

The 1933 figure for January was lower than in any other year of this record, but it should also be noted that the wholesale costs of building materials were lower in January than in the winter of any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in January, 1933, and December and January, 1932. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS ISSUED BY 61 CITIES

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, February, 1933, summarized the employment situation as follows:—

Employment at January 23, 1933, showed a decline as compared with December 19, 1932, in almost every industry. The greater part of the fall occurred, however, in the industries which normally experience a seasonal decline in January. The decline occurred mainly in the building industry, public works contracting, the distributive trades, the dress industries (except hat and cap manufacture), the food and drink industries, hotel and boarding-house service, and certain of the road transport services. There was also some decline in engineering, metal goods manufacture, most of the textile industries, furniture making and woodworking, and the printing industry. On

the other hand, there was some improvement in coal mining and slate quarrying, and in hat and cap manufacture.

There was an increase in unemployment in all divisions of the country, which was most marked in London and the Southern Counties, and in the Midlands. Employment continued moderate in London and South-East England, slack in the South-West and Midlands, and bad in all other areas.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at January 23, 1933 (including those temporarily stopped as well as those wholly unemployed) was 23.1, as compared with 21.7 at December 19, 1932, and

with 22.4 at January 25, 1932. The percentage wholly unemployed at January 23, 1933, was 18.9, as compared with 18.1 at December 19, 1932, while the percentage temporarily stopped was 4.2, as compared with 3.6. For males alone, the percentage at January 23, 1933, was 26.4, and for females, 14.3; at December 19, 1932, the corresponding percentages were 25.1 and 12.6.

At January 23, 1933, the number of persons on the Registers of Employment Exchanges in Great Britain was 2,280,033 wholly unemployed, 524,229 temporarily stopped, and 98,803 normally in casual employment, making a total of 2,903,065. This was 179,778 more than a month before, and 174,654 more than a year before. The total included 2,336,065 men, 77,912 boys, 427,166 women and 61,922 girls. Comparison of the numbers on the registers with the figures for a year before is affected to a slight extent by the results of legislative and administrative changes.

The persons on the registers included 1,310,363 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,174,499 insured persons with applications for transitional payments; 263,462 insured persons not in receipt of insurance benefit or transitional payments, and 154,741 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the Registers of Employment Exchanges at January 23, 1933, was 2,979,425.

### United States

The Bureau of Labor Statistics of the United States Department of Labor reports the changes in employment and pay rolls in January, 1933, as compared with December, 1932, based on payroll reports ending nearest the 15th of the month, received from 69,392 identical establishments in 17 major industrial groups, having in January 4,275,560 employees whose combined earnings in one week were \$81,707,219. The combined totals of these 17 industrial groups show a decrease of 3.9 per cent in employment and a decrease of 5.0 per cent in payrolls over the month interval.

Two of these 17 industrial groups reported increases in employment in January coupled, however, with declines in payrolls. The canning and preserving industry reported a gain of 1.1 per cent in employment coupled with a decline of 3.4 per cent in payrolls, and the hotel industry reported an increase of 0.7 per

cent in employment coupled with a decrease of 1.6 per cent in payrolls. The insurance-banks-brokerage-real estate group reported a decrease of 0.4 per cent in employment coupled with an increase of 0.2 per cent in payrolls. In the remaining 14 industrial groups, decreases in both employment and payrolls were reported from December to January. The decreases in these 14 groups were as follows: petroleum refining, less than one-tenth of 1 per cent in employment and 4.2 per cent in payrolls; telephone and telegraph, 0.3 per cent in employment and 2.4 per cent in payrolls; bituminous coal mining, 0.3 per cent in employment and 4.2 per cent in payrolls; laundries, 0.6 per cent in employment and 1.3 per cent in payrolls; power and light, 0.9 per cent in employment and 0.2 per cent in payrolls; electric railway and motor bus operation, 1.2 per cent in employment and 1.6 per cent in payrolls; wholesale trade, 2.2 per cent in employment and 1.4 per cent in payrolls; metalliferous mining, 2.5 per cent in employment and 3.1 per cent in payrolls; dyeing and cleaning, 2.9 per cent in employment and 3.7 per cent in payrolls; manufacturing, 2.9 per cent in employment and 5.0 per cent in payrolls; building construction, 5.1 per cent in employment and 4.1 per cent in payrolls; anthracite mining, 15.8 per cent in employment and 23.1 per cent in payrolls; quarrying and nonmetallic mining, 17 per cent in employment and 17.9 per cent in payrolls; and retail trade, 19.3 per cent in employment and 14.8 per cent in payrolls. The decreases in the retail trade, quarrying, anthracite mining, manufacturing, and building construction groups are, to some extent, seasonal. The pronounced falling-off in the retail trade group reflects the release of temporary workers employed for the Christmas trade, while decreases have appeared regularly in the quarrying, anthracite mining, building, and manufacturing industries between December and January in preceding tabulations of the Bureau.

According to a statement at the end of February from President William Green of the American Federation of Labor the number of unemployed in the United States exceeded 12,000,000.

During the month of February, a total of 2,307 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 7 of which were fatal cases; in Schedule 2 industries 134 were reported, including 3 fatal cases; and 292 accidents to employees of the Crown, 3 of which were fatal, were reported during the month, making in all 2,733, of which 13 were fatal.

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, re-modelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

- (a) All persons in the employ of the contractor, sub-contractor, or of any other persons doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;
- (b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodeling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages, rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in

Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness,

saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages, rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages, rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any

time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violation to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF PUBLIC WORKS

##### *Contracts in Group "A" (Construction, Demolition etc.)*

**Fair Wages Conditions in Harbour Commission Contracts**

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" Conditions, shall, as far as practicable, be observed by the department or departments of the Government of Canada in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan or guarantee for any of the purposes mentioned. Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissioners throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and include either the General Fair Wages Clause or a fair wages schedule.

The Department of Labour was recently notified that the following contracts were awarded by Harbour Commissioners under the above-mentioned conditions:—

**QUEBEC HARBOUR COMMISSIONERS**

Construction of repairs to the main pier and levelling, Wolfe's Cove Terminals, Quebec, P.Q. Name of contractor, Mr. Joseph Nolin, Quebec. Date of contract, January 3, 1933. Amount of contract, \$87,700. The contract contained a clause stating that the contractor shall strictly observe any federal or provincial law respecting wages and labour and the prescriptions of the Fair Wages Policy of the Government of Canada.

**VANCOUVER HARBOUR COMMISSIONERS**

Construction of an addition to Lapointe Pier and other harbour improvements at Vancouver, B.C. Name of contractors, Pacific Engineers, Ltd., Vancouver, B.C. Date of contract,

January 7, 1933. Amount of contract, \$103,315.19. Fair wages schedules were inserted in the contract as follows:—

| Trade or class of labour                    | Rates of wages not less than | Hours of labour not more than |
|---|------------------------------|-------------------------------|
| General foreman.....                        | per day<br>\$9 00            | 8                             |
| Foreman.....                                | 7 80                         | 8                             |
|   | per hour                     |                               |
| Blacksmith.....                             | 0 70                         | 8                             |
| Blacksmith's helpers.....                   | 0 50                         | 8                             |
| Carpenters.....                             | 0 87½                        | 8                             |
| Caulkers (wood).....                        | 0-8156                       | 8                             |
| Cement finishers.....                       | 0 75                         | 8                             |
| Concrete workers.....                       | 0 45                         | 8                             |
| Derrick deck hand.....                      | 0 45                         | 8                             |
| Derrick fireman.....                        | 0 65                         | 8                             |
| Derrick engineer.....                       | 1 00                         | 8                             |
| Labourers.....                              | 0 45                         | 8                             |
| Painters.....                               | 0 75                         | 8                             |
| Slinger.....                                | 0 90                         | 8                             |
| Steel workers (erectors).....               | 1 00                         | 8                             |
| Steel workers (fabricating steel rods)..... | 0 75                         | 8                             |
| Timekeeper.....                             | 0 50                         | 8                             |
| Wharf and dock builders.....                | 0 90                         | 8                             |
| Wharf and dock builders' foreman.....       | 1 12½                        | 8                             |

*Tugs, classes 1 to 6—Class "A"*

|                     | per month |
|---------------------|-----------|
| Tug captain.....    | \$200 00  |
| Chief engineer..... | 190 00    |
| Deck hand.....      | 85 00     |

*Tugs, classes 7 and 8—Class "B"*

|                     | per month |
|---------------------|-----------|
| Tug captain.....    | \$190 00  |
| Chief engineer..... | 180 00    |
| Deck hand.....      | 90 00     |

*Tugs, classes 9 and less—Class "C"*

|                     | per month |
|---------------------|-----------|
| Tug captain.....    | \$180 00  |
| Chief engineer..... | 170 00    |
| Deck hand.....      | 90 00     |

N.B.—Above rates include board allowance.

## AGREEMENTS AS TO WAGES AND WORKING CONDITIONS OF COAL MINERS AT PRINCETON, B.C.

**F**OLLOWING strikes in two coal mines at Princeton, B.C., in the Inland District, agreements were reached between the operators and the employees (LABOUR GAZETTE, January, 1933, p. 34, and succeeding issues). The first strike involved both mines commencing on November 27, 1932, the employees demanding the restoration of wage scales which had been reduced about ten per cent in March and recognition of the Mine Workers' Union of Canada.

One of the operating companies, Tulameen Mines, Limited, conceded these demands by December 12, and signed an agreement, to be in effect until December 1, 1933, providing for the restoration of the wage scale, the recognition of a pit committee, the re-engagement of all strikers without discrimination and the stoppage of haulage during the changes of shifts. As a result of a cessation of work from December 26, 1932, to December 31, 1932, following the dismissal of certain employees for refusing to work on December 24, a supplementary agreement was reached, providing for the re-instatement of miners, preference in employment for local miners, and adjustments as to charges for lamps and wash houses.

In the other mine, that of the Pleasant Valley Mining Company, Limited, the employer offered to make increases in the wage scale for most of the classes but refused to recognize the union. Efforts of the Deputy Minister of Labour for British Columbia, the Provincial Mines Inspector and the western representative of the Department of Labour to settle the dispute being unsuccessful, the mine was closed down. Early in February, however, as a result of negotiations between certain of the employees and the management an agreement was reached between the company and its employees and work was resumed on February 8, the wage scale being that offered by the company in December. After picketing the mine for a few days, on February 13, the Mine Workers Union of Canada called off the strike.

The agreement is to be in effect from February 1, 1933, to March 31, 1935, the parties to meet in conference ninety days prior to the latter date, work not to cease until negotiations should be completed.

The employees connected with the safety and management of the mine—foremen, fire boss, weigh boss, power house engineers, etc.—are not parties to the agreement. The employees under the agreement are to elect committees from among themselves to deal with all disputes. Provisions are made as to absence from work and for protection of the mine, the operation of pumps, hoists, etc., in case of suspension of operations on the expiration of the agreement or otherwise, coal to be mined for the operation of the steam plant but not for sale; also as to holidays, funerals following accidents, penalties for loading "dirty coal", slate, etc., charges for lamps, etc. In addition to the mining rates per ton the following day wage scale is included:—

### *Outside work:*

|                               |        |
|-------------------------------|--------|
| Blacksmith foreman .. . . .   | \$5 00 |
| Blacksmith helper .. . . .    | 4 00   |
| Carpenter foreman .. . . .    | 5 00   |
| Carpenter helper .. . . .     | 4 00   |
| Power house engineer—foreman. | 5 00   |
| Power house engineer—helper.  | 4 50   |
| Boiler house watchman.. . . . | 4 00   |

### *Tippie labour:*

|                              |      |
|------------------------------|------|
| Boys 16 years old.. . . .    | 2 45 |
| Boys 18 years old.. . . .    | 3 45 |
| Men on picking table.. . . . | 4 00 |
| Men on cart work.. . . .     | 4 00 |
| Box car loaders .. . . .     | 4 00 |
| Outside labour.. . . .       | 4 00 |
| Stable boss.. . . .          | 4 15 |

### *Underground work:*

|                                |      |
|--------------------------------|------|
| Miners on day work .. . . .    | 4 60 |
| Miners back hands.. . . .      | 4 00 |
| Boss drivers .. . . .          | 4 30 |
| Drivers .. . . .               | 4 00 |
| Conveyor men .. . . .          | 4 00 |
| Conveyor boys, under 19 years. | 3 25 |
| Hoistmen .. . . .              | 4 15 |
| Track layers .. . . .          | 4 50 |
| Track layers' helpers.. . . .  | 4 00 |
| General day labour.. . . .     | 4 00 |
| Timber men .. . . .            | 4 60 |
| Timber men helpers.. . . .     | 4 00 |

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

**A** SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the

records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Manufacturing: Printing and Publishing

SASKATOON, SASK.—CERTAIN EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF BOOK-BINDERS, LOCAL No. 85.

Agreement to be in effect from November 2, 1932, to November 1, 1933.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, October, 1932, page 1111.

The wages and hours are unchanged with 86½ cents per hour for day work and a 44-hour week; night work \$3 per week extra.

SASKATOON, SASK.—CERTAIN EMPLOYERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL No. 206.

The agreement which came into effect November 1, 1931, to be in effect to October 31, 1932, was extended to October 31, 1933.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, February, 1929, page 228, with the following exception:

Wages are reduced from \$48 to \$43.20 per 48-hour week for journeymen on day work in newspaper offices and from \$44 to \$39.60 per 44-hour week for day work in job offices.

### Manufacturing: Textiles and Clothing

MONTREAL, QUEBEC.—CERTAIN MANUFACTURERS OF CLOAKS AND SUITS AND THE JOINT COUNCIL, CLOAK AND SUIT MAKERS' UNION, INTERNATIONAL LADIES' GARMENT WORKERS' UNION.

Agreement signed with certain of the employers involved in a strike reported on page 276 of this issue, to be in effect from various dates in February for one year and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, May, 1932, page 611, May, 1930, page 580 and April, 1930, page 447, with certain changes.

The regular hours are unchanged at 44 per week.

Wages: the basis for the determination of prices for piece work to be the payment for a week's work by a workman of average ability and efficiency of \$44 for cutters, operators and pressers, \$38 for trimmers and under-pressers, \$35 for a tailor and 65 cents per hour for a finisher. Sample makers to be paid \$40 per week. (This restores the wage scale in effect in 1930 which was reduced by 10 per cent in 1932.)

TORONTO, ONTARIO.—CERTAIN MANUFACTURERS OF CLOAKS AND SUITS AND THE TORONTO JOINT BOARD OF CLOAK, SUIT AND DRESSMAKERS OF THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION.

This agreement covers cloak and suit makers but not dressmakers.

The agreement between the union and the Amalgamated Garment Manufacturers' Council in effect from February 7, 1930, to February 7, 1931, terminated on the latter date (LABOUR GAZETTE, May, 1930, page 580). During a strike beginning February 7, 1933 (page 276 of this issue), certain employers individually signed agreements with the union similar to that which had expired.

The regular hours remain at 44 per week.

The basis for the determination of prices for piece work is similar to that in Montreal as noted above.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—CARPENTERS AND GENERAL CONTRACTORS' SECTION OF THE TORONTO BUILDERS' EXCHANGE AND THE GENERAL CONTRACTORS' ASSOCIATION OF TORONTO AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 27

Agreement signed following a strike of the carpenters employed by one firm (LABOUR GAZETTE, February, 1933, page 130), to be in effect from January 30, 1933, to December 31, 1933.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, April, 1932, page 450, with the following exceptions:

Wages for carpenters: 80 cents per hour (a reduction of 10 cents per hour from the previous rate). Union members are not to work for any employer for less, nor will the employer pay less than this rate.

The clause in the previous agreement providing for the wages of apprentices has been omitted.

VANCOUVER, B.C.—CERTAIN ROOFING AND SHEET METAL FIRMS AND THE SHEET METAL WORKERS' INTERNATIONAL ASSOCIATION, LOCAL No. 280.

The agreement which came into effect September 11, 1931, and was summarized in the LABOUR GAZETTE, November, 1931, page 1255, and October, 1929, page 1162, has been renewed, with the change noted below, from February 1, 1933, to April 30, 1934, and thereafter from year to year subject to notice.

The wage rate to be 90 cents per hour (a reduction of 10 cents per hour).

### Transportation and Public Utilities: Water Transportation

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 273.

Agreement reached as a result of negotiations following proceedings under the Industrial Disputes Investigation Act (LABOUR GAZETTE, January 1933, page 15).

Agreement to be in effect from December 24, 1932, to October 31, 1933, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, December, 1931, page 1358, and December, 1930, page 1456, with the following change:

Wages for longshoremen, 63 cents per hour day or night for handling general cargo and 72 cents per hour day or night for handling bulk cargo. (These are reductions of 10 per cent.)

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 810 (COAL HANDLERS AND TRIMMERS).

Agreement reached as a result of negotiations following proceedings under the Industrial Disputes Investigation Act (LABOUR GAZETTE, January, 1933, page 15).

Agreement to be in effect from December 24, 1932, to October 31, 1933, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, December, 1931, page 1358, and January, 1931, page 94, with the following change:

Wages for coal handlers and trimmers: 72 cents per hour for day work and 90 cents per hour for night work (reductions of 10 per cent).

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 1039 (STEAMSHIP HORSE AND CATTLE FITTERS, SEALERS, LINERS AND CLEANERS).

Agreement reached as a result of negotiations following proceedings under the Industrial Dis-

putes Investigation Act (*LABOUR GAZETTE*, January, 1933, page 15).

Agreement to be in effect from December 24, 1932, to October 31, 1933, and thereafter from year to year until notice.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, December, 1931, page 1358 and January, 1931, page 94, with the following change:

Wages for steamship horse and cattle fitters, sealers, liners and cleaners: 59 cents per hour for day work and 88 cents per hour for night work (reductions of approximately 10 per cent).

## CIVIL SERVICE ASSOCIATION OF ALBERTA

The Civil Service Association of Alberta recently held its thirteenth convention in Edmonton. In the course of his annual report, the president referred to the progress of group insurance as "one of the strongest links in the chain of our organization". He also spoke of the "pressure being brought upon the powers to take into office those unfortunate enough to be unemployed," remarking that while having every sympathy for the unemployed, the policy of the organization was to insist "that not one of them shall be taken on to fill a position that might be filled by any permanent civil servant who is in danger of losing his or her position through curtailment of services."

The annual report of the treasurer indicated that the membership had increased from 738 to 808 fully paid-up members for 1932. According to the auditor's statement, the credit balance for the year was \$706.61 and the cash balance at the close of the year amounted to \$1,769.13, with the reserve fund (for emergency purposes) standing at \$1,658.44.

The report of the superannuation board representative showed that 53 members of the service had been retired under the provisions of the Act.

The report of Joint Council proceedings contained a review of the discussions at meetings held during the year, and pointed out that while there was no statutory authority to confirm the proposed constitution by Order in Council, yet it had the general approval of the government. The objects of the Council were set forth as being "to secure a greater measure of co-operation between the Government in its capacity of employer and the members of the Civil Service in matters affecting the service with a view to increased efficiency combined with the well-being of those employed; to consider all mat-

ters affecting the service; to suggest means for dealing with grievances; and generally to bring together the experience and opinions of the administrative, clerical and manipulative services."

Among the resolutions adopted by the convention were several dealing with group insurance and superannuation, on both of which subjects reports had been submitted. Resolutions on the former subject urged that no application for insurance be accepted from those whose age is 55 years or over unless the applicant is a member in good standing of the association; and that the provincial executive be instructed "to form a group within the group whereby the face value of policies now in force may be increased to \$2,000 in the case of males and \$1,000 in the case of females." Suggested amendments to the Superannuation Act included provision for voluntary retirement after twenty years of service.

The convention decided to seek the support of the Alberta Federation of Labour in urging upon the government the enactment of a Civil Service Act.

The association considered that the provincial Workmen's Compensation Act "is very unsatisfactory to nurses and attendants employed in mental institutions and sanitoriums," and instructed its executive to press for amendments to the present act in respect of compensation in event of nurses or attendants contracting any communicable or contagious disease in the course of duty.

The election of officers resulted as follows: R. W. Ellis, president; J. Fowler, first vice-president; R. J. Pratley, second vice-president; A. B. Mackenzie, Superannuation Board representative; Messrs. R. W. Ellis, D. J. Forbes and W. Ronahan, joint council representatives.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

**T**HE movement in prices during the month again showed a downward tendency, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was \$6.70 at the beginning of February as compared with \$6.94 for January; \$7.34 for February, 1932; \$9.44 for February, 1931; \$11.83 for February, 1930; \$10.61 for February, 1922; \$15.77 for February, 1920; \$16.92 for June, 1920 (the peak); and \$7.75 for February, 1914. The most important change was a seasonal fall in the price of eggs, while the prices of beef, pork, lard, milk, butter, cheese, rice and granulated sugar were slightly lower. A slight increase occurred in the prices of mutton and potatoes. Including the cost of fuel and rent with that of foods the total budget averaged \$15.61 for February as compared with \$15.89 for January; \$17.25 for February, 1932; \$19.78 for February, 1931; \$22.12 for February, 1930; \$26.92 for July, 1920 (the peak); and \$14.54 for February, 1914. Fuel was practically unchanged. Rent averaged slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was slightly lower for February at 63.6 as compared with 63.9 for January; 69.2 for February, 1932; 75.5 for February, 1931; 93.9 for February, 1930; 95.0 for February, 1929; 98.3 for February, 1922; 164.3 for May, 1920 (the peak); and 64.8 for February, 1914. Eighty-six prices quotations were lower, sixty-nine were higher and three hundred and forty-seven were unchanged.

In the classification according to chief component materials seven of the eight main groups were lower and one was higher. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for apples, rolled oats, oatmeal, bread, linseed oil and sugar, which more than offset advances in the prices of grains; the

Animals and their Products group, due mainly to lower prices for steers, eggs, hides, cured meats and lard which exerted a greater influence than advances in the prices of hogs, lambs, furs and fresh meats; the Wood, Wood Products and Paper group, because of lower prices for wrapping paper, cedar shingles and lumber; the Fibres, Textiles and Textile Products group, owing to lower quotations for raw silk and jute; the Iron and its Products group, due to decreases in the prices of pig iron and scrap steel; the Non-Metallic Minerals and their Products group, due to lower prices for gasoline and kerosene; and the Chemicals and Allied Products group, owing to decreases in the prices of borax and tartaric acid. The Non-Ferrous Metals and their Products group was substantially higher, due mainly to increased quotations for antimony, copper, lead, silver, tin and zinc.

In the grouping according to purpose consumers' goods declined due to lower prices for granulated sugar, fresh and cured meats, eggs, domestic coal, kerosene and gasoline which more than offset higher prices for potatoes, carrots, peanut oil and anthracite coal. Producers' goods were slightly higher, due to increases in the prices of grains, hogs, lambs, furs and raw cotton which more than offset declines in the prices of steers, hides, leather, lumber and wrapping paper.

In the grouping according to origin both raw and partly manufactured goods and fully and chiefly manufactured goods were lower, the former due to declines in the prices of raw silk, steers, hides, eggs and pig iron which more than offset advances in the prices of grains, lambs, hogs, furs, copper, tin and silver, and the latter due mainly to lower prices for canned fruit, linseed oil, sugar, lard, leather, kerosene and gasoline. Domestic farm products, articles of forest origin and articles of mineral origin were slightly lower. Articles of marine origin were unchanged.

*(Continued on page 342)*

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 334)

## EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers, and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915

the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil; and rent, these being the items for which statistics have been obtained each

month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But, as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

### Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926,

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318), and bringing the figures down to 1932. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3; 1931, 89.6.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1931 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 126.6; 1931, 125.1; natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 159.3; 1929, 159.5; 1930, 158.8; 1931, 157.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices were again slightly lower, sirloin steak averaging 20.5 cents per pound in February as compared with 20.6 cents in January and rib roast averaging 15.5 cents per pound in February and 15.8 cents in January. Prices a year ago were 25.2 cents per pound for the former and 18.8 cents for the latter. Mutton was somewhat higher in most localities, the price averaging 17.3 cents per pound in February as compared with 16.6 cents in January. Both fresh and salt pork declined, the former from an average price of 12.7 cents per pound in January to 12.2 cents in February, and the latter from 14 cents per pound to 13.5 cents. Bacon was again lower in most localities, averaging 17.4 cents per pound in February as compared with 18.1 cents in January. The price of lard declined from an average of 12.3 cents per pound in January to 11.8 cents in February. Eggs were substantially lower in all localities, the Dominion average for fresh eggs being down from 39.1 cents per dozen in January to 28.8 cents in February and for cooking from 29.5 cents per dozen to 22.5 cents. The price of milk was fractionally lower at 9.4 cents per quart, decreases being reported from Saint John, Montreal, Sarnia and Cobalt. An increase was reported from Regina. Butter prices showed a slight decrease, dairy averaging 22.3 cents per pound as compared with 22.8 cents in January and creamery averaging 25.7 cents per pound as compared with 26.1 cents in January.

Bread was unchanged at an average price of 5.6 cents per pound. Potatoes were again higher in many localities, the average price being 95 cents per ninety pounds as compared with 93 cents the previous month and 71.8 cents in February, 1932. Evaporated apples were down from an average of 15.5 cents per pound in January to 15.1 cents in February. Prunes were fractionally lower at 10.6 cents per pound. The price of granulated sugar was slightly lower at 5.7 cents per pound. Anthracite coal was slightly higher at an average price of \$15.39 per ton as compared with \$15.35 in January. In February, 1932, the price was \$16.19 per ton. Hard wood in stove lengths was down from an average price of \$12.41 per cord in January to \$11.99 in February. A decrease in rent was reported from Port Arthur and Fort William.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices for the most part averaged higher in February than in January. No. 1 Manitoba northern cash wheat, Port Arthur

and Fort William basis, was up from an average price of 44.2 cents per bushel in January to 45.8 cents in February. The high price for the month was 47 cents per bushel reached on the 21st and the low 44.5 cents reached during the first week. The increase appeared to be due mainly to a rise in sterling exchange as the price of Canadian wheat in Liverpool showed only a very slight advance in the opening days of February, after which it remained fairly steady until the 21st when some decrease occurred. In coarse grains flax advanced from 77 cents per bushel to 77.7 cents, oats from 22.5 cents per bushel to 23.3 cents and rye from 31.1 cents per bushel to 31.9 cents. Western barley was slightly lower at 27.5 cents per bushel. Rolled oats at Toronto were 10 cents per ninety pound bag lower at \$2.35. Raw sugar at New York advanced from 79.5 cents per cwt. to 83.5 cents (Canadian funds), while granulated at Montreal declined from \$4.18 per cwt. to \$4.09. Ceylon rubber at New York was down from 3.6 cents per pound to 3.5 cents in Canadian funds. In live stock choice steers at Toronto were down from \$4.11 per hundred pounds to \$4 and at Winnipeg from \$3.64 per hundred pounds to \$3.27. The price of veal calves at Toronto advanced from \$6.16 per hundred pounds to \$6.75. Bacon hogs at Toronto also advanced from \$3.76 per hundred pounds to \$3.81 and at Winnipeg from \$2.86 per hundred pounds to \$3. The price of lambs at

Toronto was up from \$5.92 per hundred pounds to \$6.03, at Montreal from \$5.61 per hundred pounds to \$5.83 and at Winnipeg from \$4.64 per hundred pounds to \$4.79. The price of creamery butter at Montreal was slightly higher at 23.9 cents per pound. Fresh eggs at Montreal were down from 31.8 cents per dozen to 25 cents and at Toronto from 28.5 cents per dozen to 23.6 cents. Cold storage holdings of eggs were said to be 66 per cent below stocks on the first of January and 72 per cent lower than a year ago. Raw cotton at New York was fractionally higher at 7.2 cents per pound (Canadian funds). Raw silk at New York was down from \$1.63 per pound to \$1.54. Foundry pig iron was down from \$22.10 per ton to \$21 in car lots, while scrap steel was 50 cents per ton lower at \$5. In non-ferrous metals electrolytic copper at Montreal was up from \$6.91 per hundred pounds to \$7.05. Copper wire bars at New York advanced from \$5.68 per hundred pounds to \$5.96 (Canadian funds). Tin at Toronto was up from 30 cents per pound to 32 cents and silver at New York was up from 29 cents per ounce to 31.2 cents. Both gasoline and kerosene prices were lower during February, the former being down at Montreal from 17½ cents per gallon to 16 cents, at Toronto from 18 cents per gallon to 16½ cents and at Winnipeg from 20½ cents per gallon to 19 cents, and the latter at Toronto from 16 cents per gallon to 15½ cents.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest table showing cost of living and wholesale prices index numbers for various countries appeared in "Prices in Canada and Other Countries, 1932," issued as a supplement to the LABOUR GAZETTE, January, 1933.

### Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 60.3 for January, a decline of 0.7 per cent for the month. Food declined 1.1 per cent due to lower prices for meat and fish and "other food," although cereals were slightly advanced. Non-foods were 0.6 per cent lower than in December.

The *Statist* index number, on the base 1867-1877=100, was 77.8 at the end of January, an advance of 0.1 per cent for the

month. Foods were 1.1 per cent higher owing to advances in both vegetable and animal food, although the "sugar, coffee and tea" group declined. Industrial materials were 0.2 per cent lower with small declines in all groups.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 141 at February 1, a decline of one point for the month due to lower food prices, chiefly butter and eggs. Rent, clothing, fuel and light and sundries were all unchanged.

### Austria

WHOLESALE PRICES.—The Federal Statistical Office index number on the base: first half of 1914=100, was 106 for February, a decline of 1.9 per cent for the month. Foods were 2 per cent lower, while industrial materials were slightly higher.

COST OF LIVING.—The official index number on the base July, 1914=100, was 105 for February, a decline of 0.9 per cent for the month, due to lower food prices, as all other groups were unchanged.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 79 for January, showing no change from the December level. Foods showed an advance due to increases in both vegetable and animal foods. Industrial materials were slightly lower with decreases in minerals and metals and in miscellaneous commodities.

### Germany

**WHOLESALE PRICES.**—The index number of the Federal Statistical Office, on the base 1913=100, was 91.0 for January, a decline of 1.5 per cent for the month, the greatest declines occurring in agricultural products averaging 4.1 per cent for the whole group. Among industrial materials, the most notable change was in rubber, which fell 7 per cent.

**COST OF LIVING.**—The official index number on the base 1913-1914=100, was 117.4 for January, a decline of 0.8 per cent for the

month. Food, clothing and sundries were all lower while heat and light advanced slightly and rent was unchanged.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 67.3 for January, a decline of 2.5 per cent for the month. All of the ten main groups were included in the general decline.

*Dun's* index number based on the estimated cost *per capita* of a year's supply of commodities in wholesale markets was \$127.606 at March 1, a decline of 0.6 per cent from the previous month. Decreases were noted in all food groups and clothing, while metals and miscellaneous commodities advanced.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 73.7 for January, a fall of 1.9 per cent for the month. All groups were lower than in December.

## FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1932

### Analysed according to Industries, Causes, Localities and Months

THE accompanying tables provide an analysis of the fatal accidents to workpeople in Canada in the course of their employment during the calendar year 1932, according to causes, provinces and months, as well as by industries. Quarterly statements giving a list of the accidents occurring during the period covered and certain particulars as to each, appeared in the *LABOUR GAZETTE*, May, August and November, 1932, and February, 1933. The tables include fatalities from industrial diseases reported by the provincial workmen's compensation boards.

The record is compiled from reports from the following government authorities: the Board of Railway Commissioners; the Explosives Division of the Department of Mines, Ottawa; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia; the Ontario Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were also received from the correspondents of the *LABOUR GAZETTE*, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered,

it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

The tables also include summary figures for 1931, being a final revision of the figures published in the *LABOUR GAZETTE*, March, 1932, by the inclusion of accidents occurring in 1931 which were reported too late for incorporation into the annual statement. These accidents were shown in detail in supplementary lists in the *LABOUR GAZETTE*, May, August and November, 1932, and February, 1933. The figures for 1932, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1931.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences in certain industries; for example, in mining, manufacturing, construction, transportation, trade and service, the decrease in the number of fatalities may be largely due to there being a reduction in the number of men engaged in these industries. The most marked decrease in any of these groups was in construction, due to the fact that this industry suffered the greatest reduction in its workers.

The most serious disaster occurring during the year was in shipbuilding, in the construction group, and was caused by a double explosion

which wrecked the oil tanker *Cymbeline* and also the dry-dock at the plant of the Canadian Vickers Company, Limited, at Montreal, Quebec, on June 17, and as a result of which thirty men lost their lives, twenty-six of whom were employees of the Canadian Vickers Company, and the other four were Montreal firemen who perished while fighting the fire. This oil tanker had been brought to the Vickers dry-dock where workmen were making repairs owing to damages made when she grounded on her way up the St. Lawrence. The first explosion occurred on the dry-dock and was followed by another terrific explosion when the tanker burst into flames. The crew on the tanker, numbering more than thirty, all escaped. In addition to the men killed a further number were injured.

An engineer and three snow shovellers were killed at Harper's Station, P.E.I., on February 21, when their snow train collided with a freight train. Three farmers lost their lives while engaged in operating a wood sawing machine near Dewberry, Alberta, on March 30, when the circular saw jammed. An engineer, a fireman and a conductor were killed near Lillooet, B.C., on March 28, when their train went through a trestle owing to a washout. Three sectionmen lost their lives following an explosion from lighting a fire in a section house where gasoline was stored, at Welland, Ontario, on April 30. On July 27, five river drivers were drowned near Deux Rivières, Quebec, when their boat capsized in rapids. When a boiler exploded and their engine was derailed near St. Malachie, Quebec, on August 5, the engineer, fireman and brakeman lost their lives. Afterdamp following an underground explosion of gas and dust at River Hebert, Nova Scotia, on December 1, resulted in five coal mining fatalities. On November 16, four men were suffocated in a fish packing plant at Halifax, Nova Scotia, when the building collapsed following an explosion caused by spontaneous combustion in dried fish. On October 6, three railway men were scalded to death when a valve head exploded at Toronto, Ontario, and on October 20, three men were killed near Dryden, Ontario, following an engine explosion. Three deck-hands and the assistant stewardess were drowned in Lake Erie, Ontario, on October 5, when a freighter foundered in a storm.

### Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 260, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as

well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 79, appear under the heading, automobiles and other power vehicles and implements. Also 57 were caused by persons being struck or run over by, or crushed by or between cars and engines, 32 of these being engaged in steam railways; 49 were in connection with watercraft (15 being in fishing and trapping and 14 in water transportation); 22 were due to derailment and collisions (21 in steam railways); 17 were caused by animal drawn vehicles and implements (11 of which were in agriculture, accidents primarily caused by animals being classified elsewhere); 16 were caused by persons falling from or in cars or engines, 15 by mine and quarry cars, and 5 by aircraft.

Next in order as a cause came "falls of persons," 160 in number, including 41 falls from elevations, 41 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 20 due to collapse of support, 16 falls from loads, etc., 9 into tanks, vats, kilns, etc., 8 into holds of vessels, 8 down stairs and inclines, 7 from ladders, 7 due to falls on the level, and 3 on sharp objects.

"Dangerous substances" caused 155 fatalities, of which 49 were due to hot and inflammable substances and flames, 30 to explosive substances, 27 to electric current, 18 to gas fumes, etc., 12 to steam escapes, boiler explosions, compressed air, 12 to conflagrations, and 7 to mine explosions from gas, coal dust, etc.

Fatalities numbering 142 were caused by "falling objects," of which 42 were due to falling trees and limbs, 40 to objects falling in mines and quarries, 30 to objects falling from elevations, loads, piles, 12 to collapse of structure, 11 to other falling objects, and 7 to breaking or loosening of straps, cables, etc.

Animals caused 44 fatalities, including 27 caused by horses. There were 27 fatalities caused by striking against or being struck by objects, of which 20 were due to being struck by objects and 7 to striking against objects, and 16 were caused by handling of heavy or sharp objects. There were 31 fatalities caused by working machines, 25 by prime movers, 13 by hoisting apparatus, and 4 by tools.

The category "other causes" includes 84 fatalities, of which 12 deaths were following infection not elsewhere specified; 24 due to industrial diseases, strains, etc.; 9 to drownings of which no particulars were available; 11 to shooting and violence, 10 to cave-ins, land slides, ice jams, etc.; 16 to lightning, frost, storms, and sunstroke; and 2 accidents as to which no particulars were available.

TABLE I.—FATAL INDUSTRIAL ACCIDENTS IN

| CAUSE   | Agriculture | Logging   | Fishing and Trapping | Mining, Non-ferrous Smelting and Quarrying | Metallic mining | Coal mining | Non-metallic mineral mining and quarrying, n.e.s. | Structural materials | Manufacturing | Vegetable foods, drink and tobacco | Animal foods | Textiles and clothing | Leather, fur and products | Rubber products | Saw and planing mill products | Wood products | Pulp, paper and paper products | Printing and publishing | Iron, steel and products | Non-ferrous metal products | Non-metallic mineral products |
|---|-------------|-----------|----------------------|--|-----------------|-------------|---|----------------------|---------------|------------------------------------|--------------|-----------------------|---------------------------|-----------------|-------------------------------|---------------|--------------------------------|-------------------------|--------------------------|----------------------------|-------------------------------|
| <b>A.—Prime Movers:</b>   |             |           |                      |  |                 |             |   |                      |               |                                    |              |                       |                           |                 |                               |               |                                |                         |                          |                            |                               |
| 1. Motors, engines, fans, pumps and automatic stokers.....                    | 1           |           |                      |  |                 |             |   |                      | 2             |                                    |              |                       |                           |                 | 1                             |               |                                |                         | 1                        |                            |                               |
| 2. Shafting, coupling, collars, set screws and keys.....                      |             |           |                      |  |                 |             |   |                      | 1             |                                    |              |                       |                           |                 |                               |               |                                |                         | 1                        |                            |                               |
| 3. Belts, lines, pulleys, chains and sprockets.....                           |             |           |                      |  |                 |             |   |                      | 7             |                                    | 1            |                       |                           |                 | 3                             | 1             | 1                              |                         |                          |                            |                               |
| 4. ### Fatalities by Provinces

The classification of fatal accidents according to provinces shows that the largest number, 310, occurred in Ontario. There were 255 in Quebec, 122 in British Columbia, 72 in Nova Scotia, 67 in Alberta, 53 in Saskatchewan, 40 in Manitoba, 27 in New Brunswick, 8 in Prince Edward Island and 7 in the Yukon and North West Territories. In Ontario the largest proportion of fatalities occurred in transportation and public utilities, where there were 60, with 56 in agriculture, 47 in manufacturing, 36 in mining, non-ferrous smelting and quarrying, 33 in service, 32 in construction, 22 in trade, 10 in fishing and trapping, 7 in logging, and 7 in electric light and power. In Quebec, the largest number, 62, was in the construction group, with 48 in transportation and public utilities, 30 in manufacturing, 29 in logging, 24 in agriculture, 21 in service, 17 in trade, 12 in mining, non-ferrous smelting and quarrying, 9 in electric

light and power, 2 in finance and 1 in unclassified. In Nova Scotia and Alberta there were respectively 19 and 16 mining fatalities, and no other industry suffered so many fatalities in Nova Scotia, while in Alberta there were 19 fatalities in agriculture. In Manitoba and Saskatchewan the largest number of fatalities was in agriculture, there being respectively 11 and 23 in this industry. In British Columbia there were 29 fatalities in transportation and public utilities, 26 in logging, 23 in mining and 13 in manufacturing.

### Fatalities by Industries

The total number of fatalities recorded for the year was 961, being classified under the various groups of industries as follows: transportation and public utilities, 191, or 19.88 per cent of the total; agriculture, 154, or 16.02 per cent; mining, non-ferrous smelting and quarrying, 123, or 12.80 per cent; construction, 122, or 12.70 per cent; manu-

facturing, 114, or 11·86 per cent; service, 81, or 8·43 per cent; logging, 72, or 7·49 per cent; trade, 50, or 5·20 per cent; fishing and trapping, 30, or 3·12 per cent; electric light and power, 21, or 2·19 per cent; finance, 2, or 0·21 per cent; and unclassified, 1, or 0·10 per cent.

The table of fatalities by months shows the highest point to have been reached in June, when there were 104, with 96 in July, and 89 in November, the average per month being 80·08. The low point for the year, 60, was reached in December. The table gives the number of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, trade, finance and service, etc., the figures were those of the decennial census of 1921 (the occupational census of industry for 1931 having not yet been completed): for manufacturing, from the annual census of industry for 1930; for mining, fishing, steam railways, street and electric

railways, telegraphs and telephones, and express, from the annual census of industry for 1931.

In previous years figures have been included showing for each industry the accident frequency, that is the number of fatalities per 1,000 persons employed. While the figures as to numbers employed were not in any instance those for the year under review, it was considered that they afforded a reasonably accurate estimate for this purpose, namely, to show the accident ratio in each industry as compared with the others. In the case of 1932, however, the reduction in numbers employed has been so marked that figures for earlier years, though the latest available, do not afford even approximate estimates, and frequency rates based on them would be misleading and are therefore not given. The latest figures available as to numbers employed, however, are included for general comparative purposes.

TABLE II.—FATAL INDUSTRIAL ACCIDENTS IN CANADA, BY PROVINCES AND INDUSTRIES (a)

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents are assigned to the provinces in which the various ships were registered, and exclude accidents to Canadian fishermen and seamen on boats registered in another country.  
For particulars of accidents, see quarterly statements in the Labour Gazette for May, August, and November, 1932, and February, 1933.

(b) Revised figures for 1931.

TABLE III.—FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1932, BY MONTHS AND INDUSTRIES

| Industry  | January | February | March | April | May | June | July | August | September | October | November | December | Total, 1932 | Per cent of total | Total fatalities in 1931 (e) | Per cent of total (e) | Number gainfully employed, latest census |

(a) Census of 1921. (b) Annual Census of industry, 1930. (c) Annual census of industry, 1931. (d) Fishermen only, 1931. (e) Revised figures for 1931.

## Fatal and Non-fatal Accidents in Canada recorded by Provincial Workmen's Compensation Boards

THE Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the records of the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining, and steam and electric railway operation accidents are dealt with by various

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation. The period varies in the several provinces; figures not reported by some Boards.

(b) Quebec from Sept. 1, 1928.

(c) Figures not yet tabulated; only total number reported to Board given.

(d) Saskatchewan from July 1, 1930.

(e) The province of New Brunswick Board reports 1,037 minor accidents in 1928, 1,774 in 1929 and 1,580 in 1930, involving no compensation or medical aid.

(f) Including 1,028 claims partially disposed of.

(g) Preliminary figures.

(h) Cases of "medical aid only" included only after Sept. 1, 1931.

governmental departments and commissions, and these are also covered by the Workmen's Compensation Boards.

The annual reports of the Workmen's Compensation Boards are reviewed from time to time in the *LABOUR GAZETTE*, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the several provincial Workmen's Compensation Boards for 1931 were summarized in the following issues: Nova Scotia, May 1932, pages 539-540; Ontario and Manitoba, June 1932, pages 667-671; British Columbia and Alberta, August 1932, pages 873-876; Saskatchewan, November 1932, pages 1180-1181; Quebec and New Brunswick, December 1932, pages 1259-1261.

None of the provincial Boards have jurisdiction over all industries so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to fatal and non-fatal accidents recorded by the several Provincial Workmen's Compensation Boards for 1928, 1929, 1930, 1931 and 1932. The figures not yet published by the Boards in their annual reports have been secured as far as available. It may be observed that the Department of Labour's figures show 1655 fatal industrial accidents as occurring during the year 1930, while the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year was 1008, this figure including none for Prince Edward Island. This difference is largely accounted for by the fact that the Provincial Boards do not include accidents in all industries. In addition, however, the Boards' records include only accidents to employees, while the Labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

### Co-operative Hospital Treatment in Quebec

Establishment throughout the province of Quebec of a Société Nationale d'Hospitalisation—a co-operative medical society which, upon payment of monthly contributions by families will conduct medical and dental clinics and tender treatment and hospitalization—is at present under way. The plan is being backed by the University of Montreal and a group of prominent French-Canadian physicians, surgeons and dentists. Hospitals and drug companies are to be represented on the executive council of the society. The society was established as an experiment some few years ago in Quebec city, and now has some 6,000 subscribers there. Believing that such an organization is necessary throughout Quebec unless a policy of compulsory state sickness insurance is adopted, the university and a group of French-Canadian medical men have decided to launch

a province-wide movement of this kind, and at present the co-operation and support of the Quebec Government is being sought.

Under the terms of contracts to be signed between the society and the public, family heads will be asked to pay so much a year to the society—this in monthly instalments ranging from 60 cents to \$3 according to the number of people in the family and their general state of health—as membership fees. In return, the subscribers' families will be assured of monthly physical examinations, medical, surgical and dental treatment, if necessary, medicine and hospitalization. In other words, families will pay so much per month for complete medical and dental treatment throughout the year, just as if they were paying compulsory state insurance as in several European countries, notably France, Germany, Italy, and Belgium.

---

The cost to the Workmen's Compensation Commission of Quebec of the disaster which occurred at Montreal on June 17, 1932, when the oil tanker *Cymbeline* and the adjoining docks were destroyed in an explosion with the loss of thirty lives (*LABOUR GAZETTE*, August, 1932, page 936), were stated in the Quebec Legislature on March 3, to have totalled \$157,558.66.

The Board of Trade of Saskatoon has appointed a committee to inquire into the advisability of promoting a five-day week among local business concerns. The board had been requested by the City Council to name such a committee for the study of the whole problem of increasing employment, reducing relief, and promoting shorter hours of work.

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Quebec Court of Appeals finds Compensation Legislation Within Provincial Jurisdiction

The Court of Appeals of the Province of Quebec, on February 28, maintained the appeal of the Attorney-General of the province from the recent judgment by Mr. Justice de Lorimier, of the Superior Court, in the case of *Slanec versus Grimstead et al*, which had declared section 36 of the Workmen's Compensation Act, 1931, and the whole of the Workmen's Compensation Commission Act, 1931, to be *ultra vires* of the Provincial Legislature. The earlier judgment, which was outlined in the LABOUR GAZETTE, June, 1932, pages 733-736, had declared that the Legislature, by setting up a commission having judicial powers, had usurped powers vested in the Dominion Government by the British North American Act.

Slanec, a workman employed by Grimstead Brothers, was injured and sued his employer for \$2,500. The latter pleaded that the case was one for the Workmen's Compensation Commission, while the plaintiff attacked the validity of the Acts which established and gave authority to the Commission. The Attorney-General of the province intervened to uphold the legislation, and appealed against the judgment of the Superior Court, declaring it to be unconstitutional.

Mr. Justice Letourneau rendered the judgment of the Appeal Court, which was composed of Chief Justice Tellier and Justices Dorion, Rivard, Letourneau and Walsh. Mr. Justice Rivard dissented from the opinion of the other four judges.

The judgment declared that the question for the court to decide was whether in naming the Compensation Commissioners the province encroached on the right reserved to the federal power by article 96 of the British North America Act. That article, his Lordship noted, in giving the provinces administrative and judicial rights, retained for the Dominion Government the nomination of judges of Superior, county, and district courts where concerned.

The case of *Shell Company of Australia vs. the Federal Commission of Taxation* had been cited to the court, but while Mr. Justice Letourneau thought the judgment in that case furnished the court here with some assistance in deciding the present issue, the whole finding did not apply. The findings that did help to decide whether or not the local Commission was a court or an administrative body, were the following:—

"A tribunal is not necessarily a court in this strict sense because it gives a final decision;

nor because it hears witnesses on oath; nor because two or more contending parties appear before it between whom it has to decide; nor because it gives decisions which affect the rights of subjects; nor because there is an appeal to a court; nor because it is a body to which matter is referred by another body."

From this judgment, His Lordship drew the conclusion that the absence of appeal from the decisions of the Commission favoured the idea that it is an administrative, rather than a judicial, tribunal.

To determine just what the powers of the Commission are, His Lordship examined them at length, as set out in the statute creating it. In sum, he decided, its powers are for the most part administrative. There were, however, without doubt judicial attributions of the Commission, but if account were taken of the purpose of the Workmen's Compensation Act, of the implications of such a law in the social order, and the fact that similar commissions already exist elsewhere, the conclusion was inescapable that the Legislature considered itself, in creating the Commission, to be faced with an administrative problem.

But did it, under the pretext of a necessary administrative measure, create a judicial tribunal? His Lordship hesitated to answer in the affirmative after examining the powers of the Commission. "It does exercise judicial powers in certain cases," His Lordship said, "but it must be recognized that for the Commission it all comes down to the payment of indemnities established by law, and that this must be done, I will not say from funds, but, for the most part, out of guarantees previously exacted. All this presupposes a considerable work of organization and administration. It is not quite state insurance, but it approached state insurance."

His Lordship therefore considered, on the basis of the motives that served in the Australian case, that the Commission here should be considered administrative rather than judicial. And, citing from the holding in the Australian case, he added: "the authorities are clear to show that there are tribunals with many of the trappings of a court which nevertheless are not courts in the strict sense of exercising judicial power."

The case here was different, however, in that the Legislature of Quebec may establish courts, so long as they are not Superior, County or District Courts.

On this particular point His Lordship did not think there was any jurisprudence outside

the country. In the *Martineau Quarry* case the Privy Council had not had to decide the point with respect to the Public Service Commission, but the Appeal Court, here expressing itself in general terms, could see from the report that the Privy Council did not view the Public Service Commission as a Superior, County or District Court. His Lordship added the opinion that the judicial duties of the Public Service Commission are more varied and wider than those of the Compensation Commission.

If the Compensation Commission were not a "Superior Court" within the meaning of the British North America Act, all difficulty disappeared. This made it necessary to determine just what is a "Superior Court." His Lordship cited definitions by Lord Halsbury which contain the distinctive characteristics of the Superior Courts here. Except for the right to subpoena and examine witnesses, powers of a Superior Court expressly reserved to the Commission, the latter, His Lordship commented, had none of the distinctive characteristics of a Superior Court—it had no competence with respect to common law, it had no right to impose fines or condemn anyone to prison; and as for general supervision and reform of lower courts, far from having such power, the Commission must submit to it—it must go to another court (the Superior Court) in order to render its decisions executory. (By this His Lordship referred to the fact that all judgments of the Commission must be homologated by the Superior Court before they can have the force of law.) It might be, he added, that this right of homologation by the Superior Court of the district left something to be desired, but the Superior Court's power of supervision and control over the Commission was admitted in principle, and that was all the court need concern itself about. Even if the Superior Court did not possess this right of homologation, His Lordship commented, the Commission, in his view, would nevertheless be under the control reserved to the Superior Court by article 50 of the Code of Civil Procedure.

His Lordship next turned to the argument that in the present case the illegality flows from the fact that the province has sought to do indirectly what it could not do directly; that is, deprive the Superior Court of a jurisdiction guaranteed to it by the Constitution, and deprive litigants of an acquired right. The objection, His Lordship added, would be serious if the province had taken from the Superior Court a power it possessed before Confederation. It was necessary, then, to determine whether the powers of the Commission were new and distinct from those pos-

sessed by the Superior Court before Confederation. His Lordship had no hesitation in answering in the affirmative. "Right or wrong," he said, "the Legislature has radically suppressed, for one class of society, the chapter on offences and quasi-offences (*delits et quasi-delits*) of the Civil Code (articles 1053, 1054, 1055 and 1056). In return the Legislature gave this class a right of a different extent and one not flowing from the same source as offences and quasi-offences. It was not simply a modification of existing rights, but a new and distinct right, because it came from a new source and was bound by "une loi speciale forfaitaire"; the responsibility of an employer in all cases with, in return, limitation of indemnity. This new situation, His Lordship pointed out, would continue to exist for the parties interested (that is, even though the Commission should go out of existence, the Workmen's Compensation Act would remain on the statute books, as before the creation of the Commission). And the respondent did not complain of the existence of this new and distinct law.

Should it be held, His Lordship asked, that persons should benefit from the law itself without being submitted to the conditions imposed by it? In his view, no, so long as the law was within the competence of the power that created it. And, in the present case, no one would dream of denying that the provincial Legislature could, by a stroke of the pen, suppress an article of the Civil Code.

No one could complain, His Lordship added, that the new and distinct law had been created. "In fact this new law exists, and the powers of the province, in virtue of sub-paragraphs 13 and 14 and 16 of article 92 of the British North America Act, permit it, in my view, to attribute the application of this new law to any tribunal it sees fit."

Accordingly, His Lordship reached the conclusion that if the Commission is a tribunal, it is principally an administrative tribunal; and if it were concluded that it was a judicial tribunal, it must still be considered an "inferior tribunal" and not a Superior, County or District Court. It must accordingly be held to be within the powers of the provincial legislature.

The appeal of the Attorney-General was therefore maintained.

#### **Deduction of Compensation Payments from Wages earned by Workman**

A brakeman employed by the Toronto, Hamilton and Buffalo Railway Company was injured on April 12, 1921, his right arm being crushed with the result that it was amputated above the elbow joint. The Ontario Workmen's Compensation Board awarded him \$50 a month for life for permanent partial dis-

ability under section 39 of the Act. The railway company, being included under Schedule 2 of the Act among the industries (in which the employers are individually liable for payment of compensation), provided for this compensation in its entirety by paying to the Board the sum of \$9,902.86 (Section 25 of the Act provides that in such cases the employer may, with the consent of the workman and the Board, commute the compensation payments for a lump sum, this sum to be paid to the Board). After the injured man had recovered, and being unfit for service as a brakeman, he was re-employed by the company as a switch tender on June 1, 1921. He was paid at the regular rate of pay for switch tenders from that date until August 16 in the same year, when his pay was reduced by \$50 a month, being the amount received by him in compensation. At that time the company had been informed by the chairman of the Board that the Act did not prohibit the re-employment of an injured workman at a rate reduced by the extent of the compensation which the workman was receiving from the Board. The workman continued to work for the company until July 7, 1931, when the job on which he had been engaged was abolished. He then brought an action against the company for the \$50 per month which had been deducted from his wages.

Mr. Justice Logie, in his judgment, said that the questions which arose for decision were, firstly, whether there was any violation of the Workmen's Compensation Act by the defendant in deducting \$50 a month from the pay of the plaintiff after he was re-employed as a switch tender subsequent to his injury, and, if so, whether the court has any power to intervene on his behalf, and, lastly, a subordinate question whether there was any enforceable contract under which the plaintiff could sue for wages.

Section 17 (1) of the Workmen's Compensation Act provides that: "It shall not be lawful for an employer either directly or indirectly to deduct from the wages of any of his workmen any part of any sum which the employer is or may become liable to pay to the workman as compensation under this part or to require or to permit any of his workmen to contribute in any way towards indemnifying the employer against any liability which he has incurred or may incur under this part.

"The meaning of this section," the learned Justice said, "is not clear, but it will be noticed that it does not in terms deal with a deduction from the pay of an injured workman who has already acquired the right to compensation. The first part of the sub-section appears to relate to the case of men or

a man presently employed contributing in respect of a future accident or to one which has already occurred and does not in terms refer to any deduction from a re-employed injured workman, although it may be that this part of the section is wide enough to cover such a case. It appears, however, reading the whole of the sub-section, that it was directed to the case of an employer setting up a fund by a deduction from his workmen to cover past or future liability to pay compensation. But it is clear that the intention of the Act is to oust the jurisdiction of the courts except where this is permitted by the Act itself and that the courts cannot interfere with the administration of the Act by the Board. If there has been any violation of section 17, then the plaintiff must go to the Workmen's Compensation Board and seek its intervention, because, under section 67 of the Act, the Board has exclusive jurisdiction to examine into, hear and determine all matters and questions arising under the part of the Act under consideration and the action or decision of the Board thereon is final and conclusive and not open to question or review in any court. Reading sections 12, 14 and 67 together, it is abundantly clear that the plaintiff cannot bring an action if he has any grievance with respect to any deduction under section 17. To grant the plaintiff the relief that he now claims would be in the teeth of the Act and might defeat a very important object of the Board, namely, the rehabilitation of injured workmen. It might and probably would mean that all industries under Schedule 2 would be compelled to discontinue the practice of re-employing injured workmen at reduced pay commensurate with the disability, with disastrous results to a large body of injured men. Moreover, there is nothing inherently unjust in the deduction. The plaintiff obtained the full wages of an able-bodied man and this was all that in equity he was entitled to obtain, notwithstanding the fact that any balance of the fund remaining in the event of his death is returnable to the defendant. By the re-employment of Aris the railway company undertook a substantial risk, namely, the risk of his total disability, in which event under his re-employment he would be entitled to further compensation."

The learned Justice said that since it was his opinion that any claim which the plaintiff may have by virtue of section 17 of the Act must be disposed of by the Board, the second ground of defence became less important. In his opinion the plaintiff had no right to sue under the wage schedule agreement negotiated by his union with the railway company. It was a collective agreement. There was no contract under which the plaintiff as an individual could maintain an action. The following cases

were cited: *Young v. Canadian Northern Railway*, LABOUR GAZETTE, December, 1930, page 1472; *Bancroft v. Canadian Pacific Railway Co.* (1920), 53 Dominion Law Reports, 272 at 279; *Caven v. Canadian Pacific Railway Co.*, LABOUR GAZETTE, September, 1925, page 945; *Ziger et al v. Schiffer and Hillman Co. Ltd.* LABOUR GAZETTE, December, 1932, page 1354.

The action was dismissed without costs.

### Question of Accident arising out of and in the Course of Employment

The Nova Scotia Workmen's Compensation Board recently submitted to the Supreme Court of the province a "stated case" in reference to the claim of the widow of a deceased workman for compensation, the question at issue being whether or not the accident which resulted in the death of the workman had arisen out of and in the course of his employment. The circumstances in this case were briefly summarized in the course of the judgment of the court, which was delivered by Mr. Justice Molish, as follows:—

"In this case an employee, Alex Vance, of the Cumberland Railway and Coal Co., during the noon hour in which he was not required to work, went to an office of the company on his own business. In so doing he was not trespassing. On his return to work he came by a way which he was at least impliedly allowed to travel and across a railway track on which coal cars ran to and from the bankhead. In crossing the track he was caught between two cars and killed.

"The question submitted to us is, viz., whether there was evidence upon which it could be completely found by the Board that the personal injury by accident which the workman sustained as aforesaid arose out of and in the course of his employment within the meaning of the Workmen's Compensation Act. This question I clearly think was correctly answered by the Compensation Board in the affirmative.

"It is unnecessary to review the legal authorities in my opinion further than to say that this case is not one in which an employee meets with an accident whilst doing something which he is forbidden to do.

### Defective Building Work considered as Non-compliance with Contract

A firm of building contractors in Manitoba had contracts for the construction of eight

grain elevators at various points in Saskatchewan and Alberta. On the conclusion of the work the owners alleged that there was defective work or material in certain of the buildings and refused to pay the full contract price. The contractors brought action for the full amount, the owner making a counter-claim for damages for alleged defective work and materials. Mr. Justice MacDonald, who heard the cases, awarded the contractors the balance which he found to be due on the contracts, less a certain sum which he allowed the owner on his counter-claim. He allowed no costs to either party. The owner appealed for an increase in the amount of damages; and the contractors by a cross-appeal asked for interest and cost of action. The Court of Appeal allowed the contractors' appeal, with costs of the action, and the owner was given the costs of the counter-claim, with the costs of the appeal, but his claim for interest was disallowed.

Mr. Justice Trueman, giving judgment in the Court of Appeal, stated that the total contract cost of the elevators, with extras, was \$114,280.47, upon which \$104,122.22 was paid by the owner. The counter-claim was for \$19,967.63. The lower court had given judgment for the contractors for \$10,158.25, the balance due them, less \$1,000 allowed on the counter-claim for defects in the foundations. Other claims under the counter-claim had been dismissed, and a claim by the contractors for interest on the balance due them had been disallowed. "The specifications," Mr. Justice Trueman continued, "provide that the contractor shall furnish all material, finance and pay labour, transportation, etc., necessary to perform in a thorough and workmanlike manner, under the direction of the foreman belonging to the contractor, all work as therein specified and according to drawings, and that in case the specifications do not specify the quality of material and work, the 'owner' shall understand they are to be first class. . . . The defendants' position upon the evidence is clear enough. It is that the foundations are defective throughout by reason of poor material and careless workmanship, and that they are entitled to have foundations which comply with the terms of the contract, the cost of which is claimed as damages. The plaintiff, on the other hand, submits that the conditions complained of were due to frost, are superficial, and have been remedied."

After reviewing the evidence, his Lordship continued: "With all respect, \$1,000 seems to me to be altogether too small a sum to compensate the defendant for the defective work and material in these foundations. I cannot think it is reasonable in view of the terms of the contract that the defendant should for this sum be obliged to accept them as complying

with the contract. The foundations of the elevator at Musidora, for instance, were made with sand and no gravel. This is not what the defendant bargained for. No repair work can remedy it. . . . The defendant's legal right is to have the foundations conform to the contract. . . . The amount allowed by the learned chief justice is accounted for by this one item alone.

"The measure of damages here," the judgment continued, "is the cost of alterations or repairs necessary to bring about compliance with the contract. . . . In no case . . . can the measure of damages be reduced to the cost of a remedy for the defect which does not really give to the owner what he had contracted for. Though the damages are difficult to assess, I think they should not be minimized in the interest of the contractor, who is at fault, but should be put on a basis that will give to one some feeling of certainty that injustice has not been done to the owner. I would therefore increase the damages to \$2,000."

#### **Practice of Charging Customers' Defaults to Delivery Men is Inequitable**

A delivery driver for a bakery company in British Columbia made a claim for wages alleged to be due to him by the company. The company had held the driver responsible for the debts of customers and deducted the amounts of such debts from his pay. The Stipendiary Magistrate allowed the driver's claim, and on appeal by the defendant company, the County Court dismissed the appeal. The judgment of the Court was delivered by His Honour Judge Cayley as follows:—

"The plaintiff is one of the delivery drivers for the defendant bakery company. His duty is to take the route given him and deliver bread to the list of customers furnished him and he signs a contract in which, amongst other clauses, sections (b) and (c) read as follows:—

(b) That he will account to the company at the end of each day for all products of the company received by him from the company. If all of such products are not accounted for by him either by cash or by delivery on authorized credit, the value of the amount of such shortage shall be paid by the salesman to the company, by deduction from wages.

(c) That he will not deliver any bread, cake or other product on credit to any person unless authorized by the credit manager, and if any unauthorized deliveries are made he shall make good to the company the value thereof. All accounts over \$2 must be O.K'd by the customer at the end of each month, accounts not O.K'd will be charged against the salesman's wages.

"The interpretation which I think should be placed upon sections (b) and (c) is that a driver shall only be responsible for debts on the part of customers incurred on his own responsibility. It was argued that drivers were employed on a *del credere*\* basis but the contract does not show that this was so. Debts of customers authorized by the management in the ordinary course of business which every business must allow for, unless it is carried out on a cash basis, should not be made a responsibility in collections entrusted to be made to the driver. The management, I hold, should not hold the drivers responsible for such debts; and to dock the driver of his pay, in order to hire a proper collector or as a reimbursement for defaults by customers, is not a usual business procedure and is not I think authorized by the contract. The defendant company not only charges customers' defaults up to the driver, but, in the present case, made an assessment of one or one and one-half per cent on the weekly wages of the driver to make good to that extent customers' defaults. The assessment is, I think, unauthorized by the contract. In any event it is inequitable and was imposed by the defendant management without the driver's protests being listened to.

"It is argued by the defence that because the drivers sign a written statement of the day's deliveries they are bound by their signatures. So they would be if it were a simple return made by themselves. But the daily returns, it seems, are made up by three separate parties, without consultation with each other, the book-keeper, the shipper and the driver. The driver in fact is presented with a complicated document, such as Exhibit 1, and told to add his account of his day's deliveries. The document is such that no one but an accountant could understand and yet the driver is held bound by it. I do not think this is right.

"The set-off, claiming that the plaintiff is responsible for deliveries on credit without being authorized by the defendant is on the above grounds disallowed and the assumption that deliveries made to regular customers on the route are not authorized by the company is, I think, unfounded.

"As to the set-off claimed based on Exhibit 7, I do not see why the plaintiff should be bound by it. No evidence was given sufficient to support it.

"I will have to dismiss the counterclaim and set-off and give judgment dismissing the appeal, set-off and counterclaim with costs.

"I think the whole system of charging up customers' defaults to the drivers or delivery

\* A *del credere* agent is one whose agreement with his principal provides that if the customer does not pay, he (the agent) will do so.

men is inequitable and would not stand investigation by the courts."

*Newcomb versus Robertson Bakeries Limited* (British Columbia), 1933. *Western Weekly Reports*, page 271.

#### **Duty of Mines to Maintain Hospitals for Employees in Ontario**

An employee of the Keeley Silver Mines Limited contracted tuberculosis of the lungs in the course of his employment, and was sent to a sanatorium at Toronto where he was treated. The sanatorium brought an action against the company to recover the cost of medical treatment, basing its claim on section 119 of the Public Health Act, which provides that in regard to unorganized territory in the Province the Lieutenant-Governor in Council may make regulations for the erection of permanent or temporary hospitals for the accommodation of persons employed in mines, lumber camps, railway construction works, etc. Pursuant to the Act, regulations were passed which provided that every mine shall provide an isolation hospital and a general hospital of types to be approved by the Provincial Board of Health for the benefit of employees. It was contended on behalf of the sanatorium that the company had failed to comply with these regulations. At the trial it was found that the company had provided medical practitioners and also an emergency and an isolation hospital. These arrangements however were never approved by the Provincial Board, and moreover were not of a kind to provide for a patient suffering from tuberculosis. The judgment declared that while the regulations related to the erection of permanent or temporary hospitals for the accommodation of persons employed in the mine, they did not relate to the particular class of service required in this case. In other words, the section "was not wide enough to cover a liability upon the part of the defendant company to pay the plaintiffs for the expenses they had incurred in taking care of this patient."

Sub-section (4) of section 119 of the Act provides as follows:—

"(4) If default is made in complying with any of the regulations the Department may direct that what is omitted to be done shall be done at the expense of the person, firm or corporation in default, and if the default is the failure to employ a duly qualified medical practitioner, as provided by clause (d) of subsection 1, the employing person, firm or corporation shall be liable to pay the reasonable expenses incurred by any employee for medical attendance and medicines, and for his maintenance during his illness."

This section, the judgment stated, was intended to cover such a case as that being

considered. However, in the present case, the Department of Health had not required the Keeley Mines to take care of the patient in the proper way and to make provision for hospital accommodation for tuberculosis patients. As the Department had not done so the action must fail.

The Court of Appeal sustained this judgment on appeal by the plaintiff.

#### **Accident Prevention Association formed in New Brunswick**

The New Brunswick Accident Prevention Association was organized at Saint John on March 2 at a meeting of employers of workmen assessed under classes one, three, four and five of the compensation act. A. F. Blake, of Saint John, was elected president. The object of the association is to prevent accidents in industry by modern scientific methods and to act on behalf of employees in matters pertaining to the Workmen's Compensation Act. It is the intention of the association to take up with the Workmen's Compensation Board and the Provincial Government any necessary matters relating to the board or the act.

At a meeting of the officers and directors, Mr. H. R. Thompson, secretary of the Maritime division of the Canadian Manufacturers' Association and the Nova Scotia Accident Prevention Association, was appointed to a similar office in the New Brunswick body. It is intended later to employ a field officer for New Brunswick to co-operate with the factory inspector and the medical inspector of the Workmen's Compensation Board.

The Premier of the province of Ontario has advised all school boards throughout the province that curtailment or discontinuance of evening classes would be permitted as a means of enabling local boards to effect savings and balance their budgets. Mr. Henry explained that this action had been taken following a request from several school boards which were hard pressed financially, and that it was intended to facilitate and expedite matters of economy where it was essential that this should be done. Such action was in no way intended to curb expenses of the Government, the Premier said, pointing out that the cost of these night classes to the province was not high. Rather, it was intended to help local boards and local districts with the problems with which they were faced because of inability to secure revenue.

## CORRECTION

### REPORT OF TRIPARTITE PREPARATORY CONFERENCE ON THE REDUCTION OF HOURS OF WORK

The following additional paragraphs should be inserted at the end of this report as printed in the last issue of the LABOUR GAZETTE, pages 195 to 201:—

“Furthermore, when the Conference, during the detailed discussion, decided by 36 votes to 21 that a Convention should be aimed at, we declared that we could not associate ourselves with such a decision, and that we declined any responsibility as regards the work of the present Conference undertaken with a view to drawing up a Convention.

“Since then we consequently abstained from taking any part in the discussion and from voting.

“At the end of the debates we merely desire to state that in our opinion the discussion has only served to demonstrate that it is a practical impossibility to continue further with the proposal put forward and to remind the Conference that the fact of our presence here must in no way be interpreted as prejudging our future attitude if the consideration of the problem is continued.”

At the end of the discussion the Workers' Group made the following statement:—

“Whereas the number of unemployed throughout the world is at least 30 millions, we note that since the Conference decided that it was desirable to aim at a Convention concerning the reduction of hours of work as a remedy for unemployment, the Employers' Group has taken up a purely negative attitude. The Workers' Group on the other hand notes the positive results arrived at by this Conference and finds that the idea of the reduction of hours of work and the maintenance of the standard of living of the workers as a remedy for unemployment has been accepted by a majority which includes the Governments of the chief industrial countries of Europe with one single exception.”

The Conference confined itself to noting both those statements which were made on the sole responsibility of their authors.

The report was adopted *nem. con.*

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

VERY little general change was recorded in employment at the beginning of March according to returns received by the Dominion Bureau of Statistics from 7,959 employers of labour, each with a minimum of fifteen employees, and representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 707,356 persons, as compared with 708,644 in the preceding month. The index number (based on the 1926 average as 100) stood at 76.9 as compared with 77.0 in the preceding month, while on March 1 in the last twelve years it was as follows: 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4; 1928, 102.6; 1927, 97.5; 1926, 92.6; 1925, 88.1; 1924, 91.8; 1923, 91.0, 1922, 82.9; 1921, 89.1.

At the beginning of March, 1933, returns furnished to the Department of Labour by 1,762 local trade unions with a total of 150,168 members showed that 24.3 per cent of these were without employment, in contrast with 25.5 per cent at the beginning of February, 1933, and 20.6 per cent at the beginning of March, 1932.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed declines in the volume of business transacted during February, 1933, when the average daily placements were compared both with those of the preceding month and also with those of February a year ago; farming and construction and maintenance were mainly responsible for the loss in the first instance, and the construction and maintenance group was, primarily, the cause of decline under the second comparison. Vacancies in February, 1933, numbered 23,714, applications 45,919, and placements in regular and casual employment 22,733.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities showed little change for March at \$6.67 as compared with \$6.70 for February. Figures for earlier dates are: \$7.27

for March, 1932; \$9.14 for March, 1931; \$11.67 for March, 1930; \$11.46 for March, 1926; \$10.54 for March, 1922; \$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was considerably higher at 64.4 for March as compared with 63.6 for February. Comparative figures for earlier dates are: 69.1 for March, 1932; 74.5 for March, 1931; 91.8 for March, 1930; 101.3 for March, 1926; 98.3 for March, 1922; 164.3 for May, 1920 (the peak); and 64.7 for March, 1914.

The loss in working time caused by industrial disputes in Canada during March was much less than that recorded for February, and was also somewhat less than the corresponding loss in March last year. Ten disputes were in progress at some time during March, involving 1,840 employees and resulting in the loss of 12,945 working days. Corresponding figures for February, 1933, were: five disputes, 4,450 workers, and 58,500 working days; and for March, 1932, nine disputes, 1,395 workers and 15,969 working days.

### Industrial Disputes Investigation Act

During the past month a Board of Conciliation and Investigation was appointed in connection with a dispute between the Hamilton Hydro Electric and its electrical workers and meter men. Another Board was established to deal with a dispute between the Canadian Pacific Railway Company and its firemen and enginemen. The constitution of the Board in connection with a wages dispute between the principal railway companies and their locomotive engineers, firemen, conductors, trainmen and telegraphers, was completed by the appointment of the third member and chairman. An application for the establishment of a Board which had been received last November was withdrawn, direct negotiations instituted through the mediation of the representative of the Department of Labour having resulted in a settlement of the dispute in question. Particulars of the recent proceedings under the Act will be found on page 378.

### Conciliation in labour disputes in Quebec.

In the section of this issue dealing with strikes and lockouts in Canada reference is made to the action of a provincial Board of Conciliation in connection with a dispute in the textile industry in Louiseville, Quebec. An account of the Quebec legislation for the settlement of industrial disputes in the province was included in the Supplement to the LABOUR GAZETTE, March, 1925, entitled: "Government Intervention in Labour Disputes." This publication has since been revised, and now forms No. 11 of the Bulletins in the Industrial Relations Series, published by the Department of Labour of Canada. The section of the bulletin relating to the Quebec legislation contains the following paragraph:—

"The history of statutory provision for conciliation or arbitration in industrial disputes in the province of Quebec shows more activity on the part of the provincial government in the settlement of disputes than in any other province. The New South Wales law served as a model for the Quebec Act of 1901, as similar to that in Ontario in 1902, by which the registrar was authorized to endeavour to effect a settlement by conciliation in any dispute in which he was requested to do so by the employer or the employees or by the mayor of the town concerned. A further duty was imposed on the registrar in requiring him to proffer his services as mediator without waiting for a request in writing to be made to him."

### Working hours reduced by British Columbia Hours of Work Act.

Replying to a question in the British Columbia Legislature on March 27, the Hon. W. A. McKenzie, Minister of Labour, stated that there had been an appreciable reduction in working hours in industrial undertakings in the province from the time of the passing of the Hours of Work Act, 1923, up to the present time. (The provisions of this Act, which became effective on January 1, 1925, were outlined in the LABOUR GAZETTE, January, 1924, page 24; November, 1924, page 910, etc.) Mr. Mackenzie presented a table showing the average weekly working hours in the various industries in each year from 1923 to 1931. Reductions in working hours appear in several industries, the following figures showing for each group the average weekly hours of labour in 1923 and 1931 respectively: Breweries, 49·16 and 46·98 hours; Builders' materials, etc. 53·22 and 45·64; Coal-mining, 47·84 and 46·75; Coast shipping, 57·35 and 53·69; Contracting, 48·98 and 44·08; Explosives, chemicals, etc.,

49·88 and 44·80; Food products, manufacture of, 53·90 and 48·84; Garment-making, 45·34 and 44·53; House-furnishing, 45·52 and 44·29; Jewellery-manufacture, 44·51 and 43·06; Laundries, cleaning and dyeing, 48·29 and 45·93; Leather and fur goods, manufacture of, 48·19 and 46·07; Lumber industries—logging, 50·86 and 48·46; Logging-railways, 53·77 and 49·13; lumber-dealers, 53·76 and 47·65; planing-mills, 55·10 and 47·33; sawmills, 55·46 and 47·39; shingle-mills, 55·49 and 47·52; Metal trades, 46·23 and 45·85; Metal-mining, 53·92 and 51·46; Miscellaneous trades and industries, 49·38 and 48·89; Printing and publishing, 45·30 and 45·29; Pulp and Paper manufacturing, 54·72 and 48·11; Smelting, 55·86 and 52·04; Street-railways, gas, water-power, telephones, etc., 47·31 and 44·85; Wood, manufacture of, n.e.s. 50·46 and 45·20. On the other hand slight increases in working hours occurred in the tobacco, oil refining and ship building industries, while in paint manufacture the working hours were the same in 1923 and 1931.

The further claim was made that as the result of the working of the Hours of Work Act, the working hours in manufacturing industries of British Columbia were shorter than those throughout Canada as a whole. This conclusion was reached by a comparison of figures secured from employers in the province with those appearing in the Dominion Census of Industry for 1930. (LABOUR GAZETTE, December, 1932, page 1298.)

### Progress of Old Age Pensions in the Maritime Provinces

The Speech from the Throne at the opening of the Nova Scotia Legislature on March 21 contained the following paragraph on the question of the entry of the province into the Dominion Old Age Pension system: "The question of providing old age pensions for the people of this province has received the attention of my Government during the year. The best information that can be obtained from the census returns and other sources shows that large additional revenues will be necessary to pay the province's proportion of the cost of such pensions. Efforts to solve the problem of providing this additional revenue are being made. The Dominion Government has given assurance that the re-assessment recommended by the Duncan Commission will be made without delay and it is anticipated that in this manner the province will be aided in providing this important social service for our people."

As was noted on page 280 of the last issue, the arrangements are being made by the government of Prince Edward Island for commencing payments of old age pensions in that province as from June 1, 1933. In 1931 acts

were passed by the legislatures of Nova Scotia and Prince Edward Island providing for the participation of these provinces in the federal system, both acts to take effect upon their proclamation. A similar act was passed in New Brunswick in 1930, subject to the same condition.

**Proposed  
residential  
qualification  
for work in  
Nova Scotia**

A bill is now before the Nova Scotia Legislature, which if enacted into law, would prohibit persons or corporations having 25 or more workers in their employment from hiring new workers who have resided in the province for less than one year. The proposed Act would be effective only until May 1, 1934, and would provide as follows:—

"No person or corporation to whom this Act applies shall hire as a workman or make any agreement or contract for hiring or employment with a person who has not been a resident of the Province of Nova Scotia for at least a year, unless the person so hired produces a certificate from the Government Employment agent in the town or city where he is to be employed or in towns where there is no Government Employment agent, from the Town Clerk, that there are no unemployed persons in such town capable of doing and willing to do the work for which the person receiving the certificate is to be hired and specifying such work."

A penalty up to \$500 is provided for each offence against the provisions of the Act.

**Consideration of  
unemployment  
insurance in  
Canada**

In the course of a debate in the House of Commons on March 22, inquiries were made as to the conclusions reached at the Dominion-Provincial Conference on January 17-19 in regard to the subject of unemployment insurance. The Hon. Hugh Guthrie, Minister of Justice, said:—

"The difficulties in the way of a federal system of unemployment insurance are very serious if such a system is to be carried out upon a contributory basis, which, I believe, is the only method which would be approved by Parliament, that is, contributions by employees, by employers, by the federal treasury and perhaps as well by the provincial treasuries. To inaugurate and carry out a scheme of that kind without provincial consent and without an amendment to the British North America Act would be impossible. Parliament cannot force employers to contribute, nor can it force employees to contribute. These are matters entirely within the jurisdiction of the various provinces, and unless the provinces are willing

to surrender some of their rights, their powers, it is impossible without an amendment to the British North America Act to carry out any scheme under the jurisdiction of this Parliament . . . . In the old age pension scheme the question was simply this: the federal government will contribute certain money and the provincial governments will contribute certain money. The difficulty was overcome by a Dominion Act and a provincial Act. That was all there was to the matter. This plan of unemployment insurance involves not only the question of government contribution, but compulsory contributions by employers and employees, which is a matter of purely provincial jurisdiction. I am disclosing no secret when I say that at the conference the provinces were not prepared to give up those rights or to agree to any amendment to the British North America Act for that purpose. Very serious discussions took place, and while the question was advanced, it certainly was not advanced to the point of agreement, no agreement being reached on the subject. Until we have a solution of these two questions: the power to assess the employer and the power to assess the employee, I do not think there is much hope of a federal unemployment insurance scheme. If we can overcome those difficulties; if we can reach an arrangement upon those two questions, then I think the field is fairly clear, and satisfactory legislation can be formulated. But until we have those questions cleared up, I do not think very much advance can be made.

"The matter is being considered by a number of departments of this government, notably by the Department of Justice. It is also being considered by a number of provincial governments. I shall not say all of them. The hope is that some satisfactory scheme may be evolved within a reasonable time, but so far the basis has not been struck."

**Recommendations of  
California  
unemployment  
commission**

The California State Unemployment Commission, appointed in 1931, published their report recently. They recommend the adoption of an unemployment insurance law similar to the Act adopted last year in the State of Wisconsin (LABOUR GAZETTE, April, 1932, page 379; March, 1932, page 323), with the exception that the California commissioners favour contributions by employees, while the Wisconsin law provides for contributions by the employers only. The plan now proposed calls for the establishment of an unemployment reserve by each employer for his own plant for the payment of benefits to his own employees, although pro-

vision is made for the voluntary pooling of the reserves of plants in the same industry. It was the opinion of the commission that the separate unemployment reserve plan furnishes a financial incentive to employers to regularize employment within their own establishments. The proposed plan provides for contributions to the unemployment reserve fund at the rate of approximately 2 per cent of the payroll until there is an accumulation of \$50 per employee. When the accumulated reserve per employee reaches or exceeds that amount, the rate of contributions to the fund is reduced to 1 per cent of the pay roll, until a maximum of \$75 per employee, is reached, when contributions cease. The total contribution to the unemployment reserve fund per employee would be \$2.20 for each \$100 of payroll, of which the employer would contribute \$1.50 and the employee 70 cents. Of this amount, 20 cents would be allocated to administration costs. Although the State would not contribute to the reserve funds, it is proposed, in order to insure the impartial administration of the law, that the law should be administered by the State, through the Department of Industrial Relations.

The report of the Commission, as outlined in the *Monthly Labour Review* (Washington), March, 1933, in addition to recommending an appropriation for emergency unemployment relief, proposes the enactment of an emergency measure, to be effective until July 1, 1935, to provide for spreading available work by means of a 5-day week and 6-hour day on all public works, whether done directly by the State or by contract; also, the adoption of the 5-day working week in the conduct of all State business so far as practicable, in order that employment may be given to as many employees as possible. It is further recommended that the law creating the Department of Industrial Relations should be amended to provide that the department should, either upon its own initiative or upon the request of employers or employees within any industry, call a public hearing to determine whether there is need for the establishment of a shorter work week within that industry. Following the public hearing, the department would then either make a recommendation to all employers within the industry as to what number of hours per week or per day should be worked, or recommend other reasonable methods of spreading work.

The principal measure advocated by the commission, however, is the enactment of a law providing for a system of compulsory unemployment reserves and compensation, to be administered by the State, and to be supported by contributions from employers and employees.

### **Self-help organization at Burnaby, British Columbia**

An organization recently formed in the municipality of Burnaby, in British Columbia for the purpose of mutual help was described by Mr. Thomas Reid, of New Westminster, in the House of Commons on March 23. It is named "the Army of Common Good," and consists of 800 or 900 members, representing about 3,000 individuals, including dependants. "These people," Mr. Reid stated, "are not on direct relief; they are out to assist themselves, and I do not believe there is another organization in the whole of Canada that has accomplished and endeavoured to do what this one has done. Their whole object is to maintain themselves and to keep away from relief, and so they are cultivating gardens and sawing firewood, doing any kind of work to help support themselves." The local member appealed to the Minister of Labour for his assistance in procuring a wharf or float on Burrard Inlet, which was required for the purposes of these workers who so far had not received any help.

The Hon. W. A. Gordon, in his reply, referred to the organization as "a fine illustration of what people can do if they set their minds to it." He pointed out that the wharf asked for had not been included in the estimates already submitted to the House. However, it appeared to be closely associated with relief work, and if the wharf was necessary to make the undertakings of these people a success, the Minister stated that it might be considered by the federal government.

### **Co-operative self-help among unemployed in United States**

Some details of the movement for co-operative self-help among unemployed workers in the United States are given in the March issue of the *Monthly Labour Review* published by the U.S. Bureau of Labour Statistics. The growth of this movement is stated to constitute "one of the most interesting developments of the present depression." Self-help organizations take many forms, arising tentatively to meet the particular needs of the unemployed in certain districts. "The undertakings here termed, for lack of a better phrase, co-operative self-help activities of the unemployed," the *Review* points out, "are not entirely uniform and have been designated locally by many terms—such as emergency exchanges, mutual exchanges, productive units, and barter and scrip plans. They are alike, however, in their general objective, which is to create a livelihood for groups of unemployed persons through the exchange of services and goods. In some cases, productive

enterprises, such as the baking of bread, is undertaken. In a number of cases also the use of scrip has been developed as a partial substitute at least for money. In general, however, the various undertakings have developed more or less spontaneously as local measures to meet conditions of serious emergency, and, as a result, have followed no uniform program or procedure. On the contrary, those which have been in existence for any considerable time have necessarily followed a 'trial and error' method, meeting as best they could the inevitable difficulties and problems as they arose, and trying new policies and methods when the old ones failed."

The Bureau of Labour Statistics is now making a field survey of this subject, and the present issue of the *Review* presents reports of the activities in several districts under the following headings: Barter and exchange movement in Utah; Unemployed Citizens' League of Denver, Colo.; Barter and exchange activities among unemployed in Cheyenne, Wyo.; The Midwest Exchange, Ohio; Cooperative production units, Dayton, Ohio; Emergency Exchange Association (Inc.), New York City; Nyack, N.Y. Trading Post; Emergency Exchange Association of Pennsylvania; The Unemployed Citizens' League of Philadelphia.

**Day shelter for unemployed men at Montreal** In a pamphlet describing the Day Shelter for Unemployed Men, which was maintained at Montreal during the winter of 1931-32, Dr. F. D. Adams, Vice-Principal of McGill University and chairman of the executive committee in charge of this social effort, states that the Shelter represented what was "practically a new departure among the many attempts to meet the unemployment situation in North America, and one which has attracted widespread attention and interest on the part of social workers." The Shelter was intended to provide for men who were turned out on the street after breakfast every morning from other refuges. As Dr. Adams says, these men "naturally sought shelter wherever it could be secured, in the waiting rooms of the railway stations, in public libraries, in shops, or in any covered places on the streets. They were naturally in the way wherever they went and were, in consequence, continually 'moved on' and cheived about by the police."

The Day Shelter movement was inaugurated by Captain William Bowie, executive secretary of the Montreal Parks and Playgrounds Association. A suitable building was secured on Vitre street through the interest of Mr. K. B. Thornton, general manager of the Montreal Tramways Company. This building was gradually fitted up with rest and recreation rooms, a theatre and concert room, a library

and reading rooms, etc. During the first few days the number entering the shelter averaged daily about 2,000, and later the number of individual men who made use of the Shelter on any one day was about 5,000. When the institution was in good running order the committee provided educational classes for men who decided to fit themselves for better positions than they had held in the past, about 200 men attending these classes regularly. It was found that there were a number of young men of the "White Collar Class" who had already received a fair education; these were taken out of the Shelter and special classes were set up for them at Strathcona Hall, the home of the Student Christian Association at McGill University.

The funds required for the Shelter were obtained chiefly by means of special subscriptions from friends in Montreal (\$6,922); from the Emergency Relief Fund provided by the Federal Government, the Provincial Government and the city (\$2,000); from the Anglican and United churches (\$2,100); and from the Montreal Parks and Playgrounds Association, for salaries (\$1,000).

The smooth running of the Shelter was due to the committee of management, who were all well qualified for the work which they respectively undertook. In order that there should always be someone in authority in every room, thirty men were picked out from the unemployed coming to the Shelter, who were judged by the superintendent to be men in whom confidence might be placed, and one of these was put in charge of each room. They slept together in a large airy and comfortable room provided for them, but obtained their meals elsewhere. Every morning before the opening hours, these men swept out the Shelter and set it in order for the day. This social experiment achieved the following results: it kept between 3,000 and 5,000 destitute men off the streets all winter, provided them with a warm place where they could sit down and amuse themselves, and if they desired to do so, could learn something useful; it made these men, who through no fault of their own were unable to obtain work, feel that they were being decently treated by the community; it had a marked influence in promoting sobriety among the men; and according to the testimony of the chief of police and the city recorders, it greatly reduced vagrancy and crime in the city.

#### **Effect of relief work in improving public health**

The functioning of relief services is mentioned by the Metropolitan Life Insurance Company as among the most powerful causes of the excellent health record of its industrial policyholders in Canada and

the United States during 1932 (reference to this record was made in the *LABOUR GAZETTE*, January, 1933, page 47). The company's *Statistical Bulletin* points out that the death rate for the year was at the unprecedented figure of 8.34 per thousand living, at ages one year and over. "The extremely low death rate of 1932 is all the more remarkable in view of the unfavourable economic conditions which prevailed throughout the year, and which seriously affected living standards of industrial wage-earners and their dependents."

One reason for the good record is found in the freedom last year from serious epidemics; "but perhaps more than any other single factor, the protection given by the effective functioning of the health departments, the clinics, by the generous treatment from physicians, and by splendidly organized relief work has operated to conserve life and health. The work of our social agencies has brought to a very small item the number of persons and of families who have suffered from actual hunger or from lack of clothing or shelter."

#### **Extension of life span of industrial population**

The same publication discusses the extension of life span during the past twenty years as follows:

"The expectation of life, at birth, among Metropolitan industrial policyholders for the year 1931 was 57.90 years. This may be compared with an expectation of 46.63 years in 1911-1912, a gain of 11.27 years during two decades. This corresponds to a gain of 24.2 per cent in the average life span of the industrial policyholders. In the general population, in approximately the same period, the gain was only 6.66 years. Thus the improvement among the insured wage-earners and their dependents has been almost twice that for the population at large.

"It is a matter of great interest that the expectation of life of the industrial population is now within two years of that of the general population. Twenty years ago, there was a difference of six and one-half years in favour of the general public. In other words, working men and their families have shown a marked improvement in their vitality. This is due, for the most part, to considerable decreases in the mortality at all of the younger ages of life, because the preventable diseases have been brought, to a marked degree, under control. Few realize the enormous social and economic benefits which these gains have brought about."

#### **Action of I.L.O. on Canadian resolution at 1928 Conference**

The 11th International Labour Conference, held at Geneva in 1928, adopted a resolution, proposed by the Canadian employers' delegate (Mr. H. H. Champ, vice-president of the Steel Corporation of Canada, Limited, Hamilton), and supported by the workers' delegate (Mr. Robert J. Tallon, vice-president of the Trades and Labour Congress of Canada), requesting the Governing Body of the I.L.O. "to follow with due attention the progress of the spirit of collaboration between employers and employed and to report on the subject from time to time" (*LABOUR GAZETTE*, July, 1928, page 747). Since 1928 the International Labour Office has published numerous reports and held conferences in compliance with these instructions. An account of this branch of the work of the I.L.O. is contributed by Mr. G. A. Johnstone, of the Intelligence Division of the Office, to the special number of the *Annals of the American Academy of Political and Social Science* which is reviewed on another page of this issue.

As Mr. Johnstone says, "the fact that the resolution was proposed by a Canadian employer and seconded by a Canadian worker sufficiently indicates the influence on it of American experience"; at the same time a strong movement was evident in other countries in the direction of closer collaboration between employers and workpeople in industry. The researches undertaken by the Office included the study of industrial relations in numbers of outstanding undertakings in various countries. Studies have been made and the results published in a series of articles in the *International Labour Review* and subsequently in two volumes. The first volume includes reports on the following undertakings: the Mines of the Saar Basin, the London Traffic Combine (which controls the majority of the transport by underground, bus, and tram in London), the Bata Shoe Factory in Czechoslovakia, the Siemens Works at Siemensstadt, Germany (electrical equipment), and the Lens Coal Mining Corporation; the second contains studies of the Sandvik Steel Works, Sweden, the F.I.A.T. Motor Car Works, Italy, the Philips Electrical Equipment and Radio Works, Holland, and the Zeiss Optical Glass Works, Germany. Some of these reports have been noted in the *LABOUR GAZETTE*, July, 1932, page 744; November, 1931, page 1199; February, 1931, page 205, etc. The Naumkeag Steam Cotton Company, Salem, Massachusetts, whose system of co-operative management was described in the *LABOUR GAZETTE*, June, 1930, page 679, and November, 1930, page 1236, is to form the subject of a further study by the Office.

The Office has also made progress in the carrying out of the second part of its program, namely, in the preparation for publication of a series of five monographs on the development of industrial relations since the war in France, Germany, Great Britain, Italy, and the United States. Each monograph will contain an introductory chapter with a general picture of the economic and industrial background in the country concerned since the war. Subsequent chapters will deal with the development of employers' organizations and trade unions, their present position, philosophy, and history. Information will also be given on the development of machinery for collaboration between employers' organizations and trade unions through collective bargaining, conciliation and arbitration, and so forth. Particular attention will be devoted to the growth of machinery for consultation between management and workers at the place of work through works' councils or other forms of representative organization.

#### **Survey of public libraries in Canada in 1931**

A report presenting the results of a "Survey of Libraries in Canada, 1931," was published recently by the Dominion Bureau of Statistics. Public library provision as at present organized in Canada is almost entirely for the benefit of urban communities. The Census of 1931 classified over 60 per cent of the population in Ontario and Quebec as urban, and almost as many in British Columbia, but much lower urban percentages are shown in the Maritime and Prairie Provinces. In the light of this distribution of population the Bureau estimates that the system of urban community libraries would reach 60 per cent of the population in Ontario and Quebec, 30 per cent in Saskatchewan and New Brunswick, and 45 per cent in Nova Scotia and Manitoba.

The number of public libraries in Canada in 1931 was 622, with four and a half million volumes, and an outside circulation of nearly 21 million. Ontario is the only province in which all urban communities are reached, but even there, as already stated, only about 60 per cent of the total population is served. Ontario and Saskatchewan show the highest number of volumes per capita available to the population served; the circulation of books is at a higher rate in the western provinces than in Ontario "probably because the western libraries are newer, while many of the Ontario libraries have been well read in previous years." All the provinces have legislation permitting the establishment of municipal or association libraries, and some have, by statute, created organizations for encouraging libraries.

Besides public libraries there are many private, commercial, and parish libraries, the latter type being specially numerous in Quebec.

In order to provide library facilities for the rural population, each of the five provinces from Ontario west has a publicly supported system of travelling libraries—i.e., a central repository of books at the provincial capital from which libraries (usually around 50 volumes) may be loaned to communities throughout the province on request. A similar function is performed in Quebec by McGill University, and its books circulate in the three Maritime Provinces as well. The number of individual travelling libraries, circulated from any one source in 1931 ranged from McGill's 213 to the Saskatchewan Government's 1,943. The total from all sources was about 3,500. Some of them are sent to schools and consist mainly of children's reading material, but the majority are taken out by voluntary community organizations.

In addition to public libraries, there are 230 university, college, and professional school libraries with 3,615,402 volumes; and 132 government, technical society, and business libraries with 2,292,899 volumes—the two groups combined representing 31 per cent more books than public libraries. The college libraries spent about \$250,000 for books and periodicals in 1931, while the public libraries spent \$500,000.

#### **Influence of the "I.L.O." on industrial relations in Japan**

"Industrial Labour in Japan" is the subject of an extensive report just published by the International Labour Office (Studies and Reports, Series A, Industrial Relations, No. 37). The report describes the social foundation on which the modern economic structure is based; the "family system" is mentioned as one of the most characteristic features of Japanese society, and the idea of the responsibility of employers for their workers as members of one family is found to supply the most powerful motive for improved industrial relations. "It is upon this belief that a great deal of their welfare work for the workers has been based, welfare work which takes the form, for instance, of granting allowances to workers on discharge, or in cases of sickness, injury, marriage, childbirth, death, etc. On the ground that these grants, which are important items in their expenses of management, are made voluntarily under the family system without any legal requirements, some employers contend that labour legislation is superfluous."

On the other hand it is claimed that "in two essential respects the International Labour

Organization has been a powerful factor on the side of progress: in providing as it were a nucleus around which the trade union movement has been able to grow and consolidate, and in furnishing by its Conventions some part of the impetus and direction of the evolution of labour legislation in Japan. In both these respects the organization has exercised a normalizing and salutary influence on the industrial life of Japan. It is impossible to read the story told in this volume of the confusion and conflict—with all their inherent dangers—in the early development of trade unionism in Japan, especially if the reader calls to mind the history of trade unionism in European countries, without realizing the importance and advantage, both for the workers and the nation, of any influence which makes for unity, rational concentration on the proper purposes of industrial association, and the growth of the sense of responsibility. It is equally impossible for those who have studied the industrial history of European countries to under-estimate the importance of any influence which, by raising the standards of conditions of labour, contributes at once to the peaceful and orderly development and to the efficiency of industry."

#### **Public works and employment in Pennsylvania**

Two Bills now before the legislature of Pennsylvania embody the idea of state-wide planning of public works construction to stabilize employment. A third bill deals with long-term fiscal planning in Philadelphia. The bills for the state would set up a board or commission to gather information on construction projects, public and private, throughout the state. Public projects would be classified into work that had to be done at once; work which, although desirable, could be postponed; and the more indefinite projects depending for their execution upon future developments. Thus informed, the state body would be able to advise how far, in order to meet the present unemployment situation or any later one, it would be necessary to dip into the second and third classes of projects. Also, in better times, a reserve of construction could be held back to be used, when needed, unless, of course, the stabilization were so successful that work could be maintained on an even keel.

The third proposed act, akin to the other two, would set up a commission of fiscal supervision in Philadelphia. Complete information on financial matters would be collected by the commission from all local governmental authorities and a comprehensive 10-year plan would be made and revised annually for local gov-

ernmental expenditures, revenues, and borrowings. In making the plan the commission would consider, among other things, the relative necessity of public-works expenditures, and its plan would provide for retaining a debt-incurring margin to meet emergencies, and for accelerating public-works construction during periods of unemployment and low costs. The commission would have advisory powers only.

#### **Industrial council in Queensland, Australia**

An Act establishing a Bureau of Industry was passed recently by the Queensland Parliament. The Act provides for the establishment of a Bureau of Industry consisting of the competent Minister as chairman, six public officials as *ex officio* members and not more than eight other members appointed by the Governor in Council. The Bureau will be a corporate body and the Director will be appointed by the Governor in Council for seven years. The function of the Bureau is to acquire and disseminate knowledge concerning the economic conditions of Queensland, including the income, production and industrial efficiency of the community, to collect statistical and other information relating thereto, and in particular to report on the following matters: Reproductive works that will provide employment and increase the wealth production of the State; the organization, capitalization and labour conditions of particular industries; the trade of Queensland, both overseas and inter-State; stock of commodities, both primary and manufactured; monetary conditions and both wholesale and retail prices; employment and unemployment generally, and in particular industries and localities; the relations between employers and employees; and any other matter, including any questions of unfair competition or of sweating, or of monopolies detrimental to the public or to any section thereof, which the Minister or the Bureau may consider to be in the public interest.

In addition, the Bureau is entrusted with the following duties: to review the statistics of employment and unemployment throughout the State; to enquire into the causes and extent of unemployment within the State or any part thereof; to enquire into and consider the most effective measures to be taken for temporarily or permanently reducing or eliminating unemployment within the State or any part thereof; to investigate and consider proposals for the productive development of the lands of the State; to investigate and consider proposals for the productive development of the mineral resources of the State; to investi-

gate and consider proposals for new public works, or for the creation of new industries, or the extension and development of existing industries, having particular regard to works or proposals for works which will indicate the greatest expenditure on wages and the least expenditure on materials and supplies, and the most expeditious repayment of expenditure entailed in such works.

The Bureau is also empowered to hold any enquiry that may be necessary into any of the following matters: the income and productivity of Queensland year by year, and the estimated production of any year; the probable economic effects of any existing regulation of labour conditions, and of any variation in those conditions, whether of wages, hours, or other matters, including the probable economic effects upon any one industry or occupation or group of industries; the relations between real wages and productivity, and any methods whereby it may be practicable to adjust wages to productivity; and such other matters of an economic nature as, in the opinion of the Bureau, may be of assistance in the administration of the Act.

The bill introduced in the Saskatchewan Legislature to limit for one year the hours of work for the building trades to which reference was made on page 254 of the last issue, was withdrawn for this session on the recommendation of a standing committee.

The Montreal Trades and Labour Council recently took action to support the province of Quebec Minimum Wage Commission in their efforts to prevent systematic violations of the minimum wage regulations which were alleged to occur in certain industries in the province. Mr. Gus Francq, chairman of the Commission, informed the Council that criminal prosecutions would be instituted against employers who continue illegally to underpay their employees.

The Dominion Bureau of Statistics has published the tenth annual report on Vital Statistics of Canada, being for the year 1930. These reports are based on data obtained under arrangement with provincial registration departments. The present issue is the fifth report covering all provinces in the Dominion. It is issued without text, consisting entirely of tables showing births, deaths and marriages by provinces and districts, infant and general mortality, causes of death, etc. In order, however, that the most essential figures for rates and comparisons in time may be available to the reader, eighteen tables containing such figures have been included in the report.

In the House of Commons on March 17, attention was called by Mr. A. M. Carmichael, of Kindersley, to the 12-hour day which nurses are required to work in hospitals, with little time allowed for meals in many cases. Mr. Carmichael suggested that the Minister of Pensions and National Health might take up with the provincial governments the question of reducing these hours, possibly to eight in the day. The Minister, the Hon. Murray MacLaren, while agreeing that the working hours of nurses were unduly long, pointed out that the regulation of working hours was a matter for the provincial legislatures.

Emergency legislation initiated by President Roosevelt includes provision for recruiting a civilian conservation corps of 250,000 unemployed men for reforestation and checking soil erosion in the United States. Opposition to this proposal was expressed by President William Green of the American Federation of Labor, as involving the regimentation of labour under military discipline. He approved the reclamation objective of the legislation, but claimed that the men engaged should be paid standard rates of pay under voluntary conditions of employment.

The establishment of a Department of Labour in Nova Scotia under the provisions of the Department of Labour Act, 1932, was noted in the LABOUR GAZETTE, January, 1933, page 2. An Order in Council published in the provincial *Gazette*, March 22, 1933, assigns the following administrative functions to the new department: all matters respecting labour bureaux and the protection of persons employed in factories assigned by legislation or otherwise to the Department of Agriculture or to any member of the executive council.

A new trial for Thomas J. Mooney was ordered on March 25 by Superior Judge Louis H. M. Ward, California, to be held on April 26. Mooney was condemned to death in 1916 for alleged participation in the bombing of the "Preparedness Day" parade at San Francisco in 1916, when 10 persons were killed and 40 others were injured. Some of the evidence connecting him with the crime has since become discredited, and the feeling was widespread in labour circles that the accused had been convicted on "framed" testimony. Judge Ward, in granting a new trial, said: "There is no doubt in my mind that this man is entitled to his day in court. We must keep expenses down, but if previous testimony has been perjured and this defendant can prove that by new evidence, he is entitled to his freedom if it is found he should be free."

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of March was reported by Superintendents of the Employment Service of Canada to be as follows:

Farming was quiet in Nova Scotia but due to a heavy snow fall, logging operators in some localities were busy hauling. Fishermen also were occupied in repairs to boats and nets, making preparations for the spring catch of herring and lobster. Ice conditions on the coast, however, hampered fishing to a certain extent. Mines in the New Glasgow area operated from one to five days per week, while the majority of those in Cape Breton and vicinity worked one day, the others, two days. Bakers reported business fair, but confectioners, a slackening after the Easter preparations. Conditions in the steel industry were slightly better. No change in building construction was shown, except at Halifax, where building permits showed an increase. Relief work on streets and sewers also continued at that point. Increased passenger transportation was the result of special excursion rates, but general passenger and freight traffic was quiet. Trade, also as a result of the special rates on the railways, showed improvement, but collections were poor. Signs of spring household cleaning were reflected in an increased demand for charworkers, but calls for general domestics remained unchanged.

As in Nova Scotia, farming in the Province of New Brunswick was quiet, although city markets were plentifully stocked with supplies. There was a large quantity of fresh fish landed, with gaspereaux of a larger size than usual. Lobster factories were made ready and fishermen were engaged with repairs to lobster tackle. There was no movement of hardwood timber in the logging industry, due to poor road conditions. Saw mills were busy. Manufacturing industries, with the exception of confectioners, showed little activity, although prospects appeared brighter for the opening of new plants later on. Little new construction work was being carried on, but repair work provided some employment in the building trades, while relief work was provided at the Airport in Saint John. Both transportation and trade were active, wholesale houses being occupied with the display of spring goods. There was little change in the women's domestic section, as about the usual number of placements was recorded.

Quietness prevailed in farming in the Province of Quebec, as spring work had not yet started. There were also no openings for

bushmen with logging companies. Some activity in mining was evident at Rouyn, indicating improvement in conditions in that district. Little change was noted in manufacturing, except at Hull, where a few placements were made. In Montreal, boot and shoe factories, metallurgy and rubber were quiet, while textiles and clothing factories were slightly busier. In Quebec City and Three Rivers, factories operated on reduced time. Calmness also prevailed in Sherbrooke. In Hull, Three Rivers and Montreal, a few placements were made in the building trades, although snow removing in the latter city constituted the chief means of employment, but at Quebec, no building construction was in progress. Transportation throughout the province was quiet, also trade. Orders for domestic help were numerous in the larger cities, with an adequate number of applicants offering their services.

There was a decided improvement in the demand for general farm labour in Ontario, with an increase in the number of inquiries for help for the spring work. In some instances wages offered were higher, but in the majority of cases only single experienced men were desired. There was no activity in logging, as nearly all camps had completed their winter operations and men were returning to the towns, no further work being anticipated until the spring drives. Several planing mills in the vicinity of North Bay had been busy dressing a few carloads of lumber for export to the West Indies. Mining showed little improvement. The general industrial situation remained practically unchanged. Textile factories continued to run fairly steadily, but without additions to staffs, and where the usual seasonal slackness had occurred employees were generally retained on a part time basis. Iron and steel plants were all slack. At London and Hamilton, shoe factories were busy, but tanneries only moderately so. Ordinary building showed no marked change, though a considerable amount of repair work was being done on dwellings. Replacements continued to be made in the highway camps and in Airport construction, and relief work on streets and sewers was carried on in different municipalities. A number of men at Kingston were also employed on steamers fitting out for the opening of navigation. Vacancies for workers of a better class were appearing in the women's section at Toronto, while there was a growing demand throughout the province for good domestics and charworkers.

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

|   | 1933       |               |               | 1932          |               |               |

(8) MacLean's Building Review.

The movement of farm labour in Manitoba was somewhat greater and orders for men on a wage basis were coming in greater numbers. The farm relief plan had also been extended for the month of April and this increased the demand for agricultural help. Logging, mining and manufacturing were all very quiet. Construction also showed little activity, a few repairs and alterations to existing buildings being about all the work available. No marked change was noted in trade conditions. Wholesale grocers in Winnipeg reported the volume of business fair, while footwear indicated some improvement, but retail trade remained quiet. Registrations and placements in the women's domestic section were almost equal. A greater number of day workers was required, but the demand for domestics and other help showed a nominal decline.

There was an increase in calls for farm help in the Province of Saskatchewan, the extension of a month's time on the Farm Relief scheme resulting in the continued placements of men in this group. Miners were practically finished for the season, with mines carrying only summer crews from April first. While prospects of spring gave increased employment to general labourers, requests received were entirely inadequate to supply the number of applicants registered. All orders with reasonable wages were readily picked up, but agricultural sections seemed the only ones where work was available. Relief work continued on streets and ditches, but in some districts this was to be only of short duration. Much activity prevailed in the women's domestic section, especially at Swift Current, although difficulty was sometimes experienced in obtaining applicants who were willing to take country work.

A few orders in Alberta for farm help for spring were being received at the offices, but it was too early in the season to show any great increase in demand. Logging was quiet and men were returning to the towns as the camps reduced their staffs. The majority of mines had closed for the season, thus throwing many miners on unemployment relief. Manufacturing, also, was very slack. Construction, both building and railway, showed little activity, although it was possible men would be taken on before the month was out in the latter division for section and railway gangs. Relief work continued in the various centres. Trade was dull. There was little call for women domestic workers with applicants still greatly in excess of vacancies.

There was little call for farm help in British Columbia, but a more optimistic feeling prevailed in the lumbering business, as orders showed a greater improvement than for some

time past. Saw mills, however, were slack. Prospects appeared better for a resumption of activity in mining districts, but present developments were retarded until after the spring thaw. Manufacturing was quiet, also construction, with provincial relief work still being carried on. A considerable falling off in shipping was reported from New Westminster, with work on the waterfront active at Prince Rupert, but quieter at Vancouver. Employment at the drydock and shipyard at Prince Rupert was, also, fairly steady. Trade was only fair. Little change was shown in the women's domestic section with a surplus of applicants for all classes of employment.

There was very little change in employment at the beginning of March, according to monthly statements furnished to the Dominion Bureau of Statistics by 7,959 of the larger employers of labour throughout Canada. The working forces of these firms aggregated 707,356 persons, as compared with 708,644 in the preceding month. The index number (based on the average for 1926 as 100) stood at 76.9 as compared with 77.0 in the preceding month, while on March 1 in the last twelve years it was as follows: 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4; 1928, 102.6; 1927, 97.5; 1926, 92.6; 1925, 88.1; 1924, 91.8; 1923, 91.0; 1922, 82.9; 1921, 89.1.

The trend was downward in Quebec, the Prairie Provinces and British Columbia, but favourable in Ontario and the Maritime Provinces. In the Maritime Provinces, the largest gains were in coal mining, but manufacturing and communications also showed improvement. On the other hand, losses were registered in logging, transportation, construction and trade. In Quebec, increases took place in manufacturing, particularly in the iron and steel, textile and tobacco, distilled and malt liquor groups; logging, however, was seasonally quiet, and trade, construction and transportation also afforded less employment. In Ontario, iron and steel and textiles recorded considerable recovery, and highway construction was also more active, while logging, trade and mining were seasonally slack. In the Prairie Provinces, coal mining, transportation and trade reported reduced activity, but construction afforded more employment and manufacturing and logging also recorded small increases. In British Columbia, construction, transportation, trade and mining showed decreases, while manufacturing and logging registered improvement.

Employment declined in Montreal, Toronto and Vancouver; the trend was favourable in Quebec city, Hamilton, Winnipeg, Windsor

#### EMPLOYERS' REPORTS

and the adjacent Border Cities, while in Ottawa practically no change was indicated. In Montreal, there were additions to staffs in manufacturing and transportation, but large reductions were reported in construction work; trade also was not so brisk. In Quebec, manufacturing, construction and transportation afforded more employment, while other industries reported only minor fluctuations. In Toronto, the increase in manufacturing, chiefly in the iron and steel and textile groups, was offset by decreases in trade, construction and transportation. In Ottawa, there was practically no change in the city as a whole, although a slight improvement was indicated in trade. In Hamilton a more favourable condition was reported, especially in manufacturing. In the Border Cities heightened activity was noted, almost entirely in manufacturing, especially automobile works, although the trend was generally upward. In Winnipeg the increase was largely in manufacturing, while minor losses were registered in transportation, communications and retail trade. In Vancouver, curtailment was indicated chiefly in construction and trade, but manufacturing and water transportation were more active.

A review of the returns by industries shows improvement in manufactures, notably in textiles and iron and steel, while leather, lumber, rubber, pulp and paper and beverage factories were also more active. On the other hand, operations in logging, transportation, communications and trade were seasonally curtailed.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1933.

TRADE  
UNION  
REPORTS

Statements tabulated at the close of February from a total of 1,762 labour organizations, with 150,168 members, indicated that 36,494 or 24.3 per

cent were without work, in contrast with unemployment percentages of 25.5 in January and 20.6 in February, 1932. In Nova Scotia the percentage of idleness showed a large drop from January, for the most part caused by the failure of a certain union to make returns for February, this union having in January recorded much inactivity among its members. The favourable employment trend in the Alberta coal mines and manufacturing industries was responsible for the somewhat better situation reported from that province in February, and in Manitoba and Saskatchewan the tendency was toward greater activity, though the changes were slight. On the contrary, Quebec, Ontario and British Columbia recorded declines in employment of less than 1 per cent, the contractions reported from New Bruns-

wick being slightly greater. All provinces participated in the retrogressive employment movement shown from February, 1932, Ontario and Quebec, with recessions of about 6 per cent and over 4 per cent respectively, showing the most noteworthy curtailment. In New Brunswick, Manitoba and Saskatchewan decreases in activity of around 2 per cent occurred, Nova Scotia, Alberta and British Columbia showing but fractional losses.

On another page of this issue appears a more detailed article with tabular statements on unemployment at the close of February, 1933.

EMPLOYMENT  
OFFICE  
REPORTS

During the month of February, 1933, the offices of the Employment Service of Canada made 24,003 references of persons to vacancies, and effected a total of 22,733 placements of which 8,771 were in regular employment and 13,962 in casual work. Of the placements in regular employment 5,989 were of men and 2,782 of women. Applications for work were received from 45,919 workers, of whom 35,391 were men and 10,528 women, while employers notified the Service of opportunities for 18,241 men and 5,473 women, a total of 23,714 vacancies. A decline was shown in the business transacted when the above figures were compared, both with those of the preceding month and also with those of the corresponding month of last year; the reports for January, 1933, showing 28,602 vacancies offered, 56,873 applications made, and 27,304 placements effected; while in February, 1932, there were recorded 33,426 vacancies, 55,558 applications for work, and 32,633 placements in regular and casual employment. A report in detail of the work of the offices for the month of February, 1933, will be found elsewhere in this issue.

BUILDING  
PERMITS AND  
CONTRACTS  
AWARDED

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during February, 1933, was \$906,906, as compared with \$1,163,878 in the preceding month and with \$2,845,271 in February, 1932.

The value of construction awards throughout the Dominion during March, 1933, is estimated by the *MacLean Building Review* at \$3,191,600. Of this total, \$1,269,200 was for business buildings; \$1,106,800 was for residential buildings; \$429,300 was for engineering purposes, and \$386,300 was for industrial purposes. The apportionment of the contracts awarded during March, 1933, by provinces was as follows: Ontario, \$1,325,400; Quebec, \$972,700; British Columbia, \$517,500; Nova Scotia,

\$109,800; Alberta, \$107,000; Manitoba, \$74,500; New Brunswick, \$46,200; Saskatchewan, \$38,500.

### Production and Trade

INDUSTRIAL PRODUCTION Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 373.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that economic conditions in Canada were not greatly altered during February from the preceding month. While productive operations were quiet in February, the decline from the preceding month, after seasonal adjustment, was moderate. The index of the physical volume of business, consisting of 45 factors adjusted for seasonal tendencies, was 67.0 in February, compared with 68.1 in January. Mineral production, based on nine factors, made a better showing, general gains being recorded except in asbestos. Nickel exports were 3,469,400 pounds compared with 3,079,000 and exports of copper from mines showed a gain. Zinc exports were 14,007,000 pounds compared with 8,296,000. Gold shipments to the Mint and export markets were 225,492 ounces compared with 262,740, a moderate gain being shown after seasonal adjustment. Silver was exported in greater volume. Imports of bauxite for the manufacture of aluminium were 3,060,000 pounds compared with 2,062,500 in January. The index of mineral production was 94.2, compared with 80.5 in January.

The manufacture of foodstuffs was less active than in the preceding month. Inspected slaughterings of live stock showed a gain after seasonal adjustment. Exports of cheese after the usual adjustment were somewhat greater. The milling industry was less active in the last month for which statistics are available. The index of the manufacture of foodstuffs was 63.0 compared with 67.9. Release of cigars was 4,675,000 compared with 3,966,000, leaf tobacco and cigarettes showing a decline. The decline in the imports of crude rubber was less than normal for the season. The manufacture of boots and shoes was slightly greater in the last month for which statistics are available. Imports of cotton and wool for further manufacture were in lesser volume, the index of textile imports of this class being 56.1 compared with 60.0 in January. Further reduction was shown in the output of newsprint, the total being 125,610 tons compared with 140,539. Wood pulp exports showed a gain after seasonal adjustment, while exports of

planks, boards and shingles recorded decline. The wood and paper index was 59.8 compared with 63.4 in January. Two blast furnaces were banked in February, leaving no furnaces in operation at the end of the month. The output of pig iron and steel showed a sharp decline. The manufacture of automobiles was less, whereas a gain would have been normal for the season. The iron and steel index dropped from 31.9 to 19.6. The imports of crude petroleum were 37,556,000 gallons compared with 35,085,000, the gains after seasonal adjustment being nearly 37 per cent. Electric power production on an average daily basis was 46,413,000 k.w.h. compared with 45,053,000 in January, a gain after seasonal adjustment of nearly 3.5 per cent.

The index of industrial production, including mining, manufactures, construction and electric power, was 60.9 compared with 62.2.

**Coal.**—Coal production in Canada during February amounted to 1,036,405 tons, a decline of 19.6 per cent from the 1928-1932 average for the month of 1,288,914 tons. The February output consisted of 565,356 tons of bituminous coal, 53,487 tons of sub-bituminous coal, and 417,562 tons of lignite coal.

An increase of 4.3 per cent was recorded in the output of coal in Alberta; the month's production was 494,600 tons as compared with 474,398 tons in January. Nova Scotia mines produced 273,942 tons, a decline of 2.2 per cent from the January total of 279,966 tons. British Columbia's output totalled 128,927 tons as against 127,810 tons in January. Saskatchewan produced 113,902 tons in February; during the preceding month 115,311 tons were mined. In New Brunswick the output during February amounted to 25,034 tons, a slight decline from the January total of 25,758 tons.

Imports of coal into Canada during February amounted to 455,272 tons, or 48.1 per cent below the average for the month during the past five years of 876,548 tons. Anthracite coal importations totalled 175,334 tons, made up of 128,049 tons from the United States and 47,285 tons from Great Britain. Bituminous coal imports included 267,342 tons from the United States and 12,105 tons from Great Britain. Lignite coal receipts consisted of 452 tons cleared through British Columbia ports and 39 tons through Manitoba ports.

Canadian coal exports in February were recorded at 22,413 tons, a 51.6 per cent decline from the 1928-1932 average for the month of 46,333 tons. Exportations through Nova Scotia and New Brunswick ports amounted to 10,040 tons and through Manitoba, Saskatchewan, Alberta and British Columbia ports, 12,373 tons.

Coal made available for consumption in Canada in February was computed at 1,469,264 tons as compared with the February, 1928-32 average of 2,119,129 tons. The February supply was made up of 175,334 tons of anthracite coal, 824,334 tons of bituminous coal, 53,487 tons of sub-bituminous coal, and 416,109 tons of lignite coal.

**EXTERNAL TRADE** A summary of Canadian trade in February, 1933, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$23,514,114, as compared with \$24,441,133 in the preceding month and with \$35,586,085 in February, 1932. The chief imports in February, 1933, were: Non-metallic minerals and products, \$4,404,770; Fibres, textiles and textile products, \$4,390,038; Iron and its products, \$3,643,315.

The merchandise exported from Canada during February, 1933, amounted to \$26,397,528 as compared with \$31,561,813 in the preceding month and with \$36,431,055 in February, 1932. The chief exports in February, 1933, were: agricultural and vegetable products, mainly foods, \$8,058,735; Wood, wood products and paper, \$7,302,998; Animals and animal products, \$4,097,987.

### Strikes and Lockouts

The time loss due to industrial disputes during March was only about one-fifth of that recorded for the previous month, the number of workers involved showing a similar decrease, the higher figures for these two items during the previous month being due to strikes of women's cloak and suit factory workers in Toronto, Ont., and Montreal, P.Q., in which some 3,800 workers were involved with a resulting time loss of 43,000 working days. The number of strikes and lockouts recorded, however, was twice as great as that for the previous month. As compared with March, 1932, while a slight increase appears in the number of disputes recorded and in the number of workers involved, the time loss recorded is somewhat lower, strikes involving coal miners in Alberta accounting for the higher figure during the month of March last year. There were in existence during the month ten disputes, involving 1,840 workers, resulting in a time loss of 12,945 working days, as compared with five disputes involving 4,450 workers and resulting in a time loss of 58,500 working days in February, 1933. In March, 1932, there were on record nine disputes, involving 1,395 workers and resulting in a time loss of 15,969 working days. At the end of the month there were four disputes in progress recorded as strikes and lockouts involving approximately 235 workers. These figures do not include those strikes and lockouts in which employ-

ment conditions were no longer affected but which had not been called off by the union.

### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was little changed at \$6.67 for March as compared with \$6.70 for February. These figures compare with \$7.27 for March, 1932; \$9.14 for March, 1931; \$11.67 for March, 1930; \$11.46 for March, 1926; \$10.54 for March, 1922; \$16.92 for June, 1920 (the peak); and \$7.68 for March, 1914. The prices of lard, eggs, bread, evaporated apples, sugar, tea and potatoes were somewhat lower, while the prices of butter, veal and mutton were higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.59 for the beginning of March as compared with \$15.61 for February; \$17.16 for March, 1932; \$19.47 for March, 1931; \$21.96 for March, 1930; \$21.77 for March, 1926; \$26.92 for July, 1920 (the peak); and \$14.35 for March, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926, was considerably higher at 64.4 for March as compared with 63.6 for February. Figures for earlier dates are 69.1 for March, 1932; 74.5 for March, 1931; 91.8 for March, 1930; 101.3 for March, 1926; 98.3 for March, 1922; 164.3 for May, 1920 (the peak); and 64.7 for March, 1914. In the classification according to chief component materials four of the eight main groups were higher, two were lower and two were unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for grains, flour, bran and shorts which more than offset lower prices for canned fruits and fresh vegetables; the Animals and their Products group, due to advances in the prices of steers, hogs, lambs, hides, butter and fresh and cured meats, which more than offset declines in the prices of calves and eggs; the Non-Ferrous Metals and their Products group, due to advanced quotations for antimony, copper, lead, silver, tin and zinc; and the Chemicals and Allied Products group, because of advanced prices for hemlock and logwood extract. The Iron and its Products group and the Non-Metallic Minerals and their Products group were lower, the former because of reduced prices for galvanized iron and hot rolled and annealed steel sheets which more than offset higher quotations for automobile body plates, and the latter due mainly to lower prices for gasoline and cement. The Fibres, Textiles and Textile Products group and the Wood, Wood Products and Paper group were unchanged.

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

**A**N APPLICATION for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act was received in the Department of Labour on March 23 from the Hydro Electric Commission of the City of Hamilton. The dispute arose in connection with a suggestion made by the Commission that, in view of conditions, there should be a general reduction in salaries and wages affecting every employee. This suggestion was protested by the employees, who are represented by Local No. 138 of the International Brotherhood of Electrical Workers, Local No. 7 of the Hamilton Hydro Employees' Association, and the Hamilton Hydro Electric Meter Men's Association. One hundred and fifteen employees are stated to be directly affected by the dispute and 75 indirectly. A Board of Conciliation and Investigation was established by the Minister of Labour on April 7 and members thereof were appointed as follows:—on the employer's recommendation, Mr. C. W. Sherman, of Hamilton, Ontario; on the employees' recommendation, Mr. Fred Bancroft, of Oakville, Ontario. Messrs. Sherman and Bancroft have been requested to confer with a view to naming jointly a person for appointment as third member, who will be Chairman of the Board.

A Board of Conciliation and Investigation was established by the Minister of Labour on March 16 to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees being members of the Brotherhood of Locomotive Firemen and Enginemen. The matter in dispute concerns the application of the mileage regulations governing conditions under which demoted engineers may revert to firemen's positions. The number of employees directly affected is stated to be 4,000. The personnel of the Board is as follows:—His Honour Judge J. H. Scott, Perth, Ontario, Chairman, appointed

on the joint recommendation of the other Board members; Mr. Lynn B. Spencer, K.C., Welland, Ontario, appointed by the Minister in the absence of a recommendation from the employing company, and Mr. Howard S. Ross, K.C., Montreal, P.Q., appointed on the employees' nomination.

With the appointment of the Honourable Mr. Justice G. F. Gibsons, of Quebec, P.Q., as third member and Chairman, the constitution of a Board to deal with a wages dispute between the Canadian National Railways, Canadian Pacific Railway and subsidiary railways, on the one hand, and their locomotive engineers, firemen, conductors, trainmen and telegraphers, on the other hand, was completed on March 17th. (Earlier proceedings in this case were noted in the last issue, page 266). The appointment was made by the Minister of Labour in the absence of a joint recommendation from the other Board members; Messrs. Geo. C. McDonald, C.A., of Montreal, and W. F. O'Connor, K.C., of Toronto, nominees of the companies and employees, respectively.

Employees of the New Brunswick Telephone Company, Limited, at Saint John, N.B., notified the Department of Labour on March 10 that they desired to withdraw the application for the establishment of a Board of Conciliation and Investigation which they had submitted in November last (*LABOUR GAZETTE*, December, 1932, page 1290). This was the outcome of direct negotiations between the parties which had been instituted through the mediation of Mr. E. McG. Quirk, departmental representative. The employees concerned in the dispute were members of Local Union No. 605, International Brotherhood of Electrical Workers, 140 men being directly affected and 200 indirectly. The cause of the dispute was stated to be a furlough proposed by the company, i.e., a reduction in the number of working days over a given period.

## PROCEEDINGS UNDER THE QUEBEC TRADE DISPUTES ACT

**A**S a result of a strike of employees in a textile factory at Louiseville, Que., following a reduction in wages, the dispute was referred to a Council of Arbitration under the Quebec Trade Disputes Act, Chapter 97, R.S.Q., 1925, as amended. The council consisted of Mr. A. Milot, appointed on the recommendation of the employees; Mr. J. A. Collette, appointed on the recommendation of the employer, and Mr. Maxime Morin, President, appointed by the Hon. C. J.

Arcand, Minister of Labour for the province of Quebec, the other two members having failed to agree on a recommendation. The text of the decision follows:—

(Translation)

### TRADE DISPUTES ACT

Chap. 97, R.S.Q., 1925, as amended

*Re Dispute* between the Associated Textiles of Canada (Employers), and its workers.

We, the undersigned, chairman and arbi-

trator in a dispute between the Associated Textiles of Canada and its workers, hereby decide—

That the rate of wages paid to workers at the silk mill at Louiseville shall remain the same as before the reduction of March, 1933, subject however to the following qualification:

That the reduction put into effect in March, 1933, was not justified and that the amount deducted from the wages shall be reimbursed.

We recommend, furthermore, that the rate of wages of labour in the Printing Department be not less than 16 cents an hour and, in this connection, that in the case of workers thus entitled to an increase, the increase shall date from March 30, 1933.

(Sgd.) MAXIME MORIN,  
President.

P. A. MILOT.

Louiseville, March 29, 1933.

## CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

### Summary of Recent Decisions

REPORTS have been received of ten cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the *LABOUR GAZETTE*, December, 1932, page 1291, and in previous issues. The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925, the date of the inception of the Board, to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

### Case No. 106—Accounting Department—Atlantic Region

A clerk in the Freight Claims Office at Moncton claimed an adjustment in his seniority status. He had entered the service of the Intercolonial Railway in 1906 in a position covered by the schedule for "Clerks and Other Classes of Employees." In 1910 he became a porter in the freight shed, continuing in that position for five years, after which, in 1915, he was appointed correspondence clerk in the freight office, later occupying another position in the same office. The question of his seniority standing having arisen it was ruled by the company that it should date from 1915. The employees claimed that the years during which the man worked as a porter should be reckoned, since according to the schedule all employees under the jurisdiction of the superintendent of each district came within the same promotion group. The company, on the other hand, disputed the statement that freight clerks and freight porters were in the same promotion group, and stated that employees transferred to the Freight Claims Office from another department were only allowed seniority from the date of their being transferred. In this case, the company pointed out that the general chairman had agreed in 1925 as to the dating of the seniority of this man from 1915; no protest had been made for seven years, and no new facts had developed.

The Board found that the evidence submitted in support of the employees' contention was not conclusive, and denied the claim.

### Case No. 107—Operating Department— Central Region

Various clerks in the locomotive and car repair shops at St. Malo, Quebec, protested against seniority rights being allowed to a material distribution clerk who before his appointment had not worked in a position covered by the schedule. The company claimed that this man had been a timekeeper, a position excepted from the schedule, and that it would be unjust to discharge him from the service and force him to accept a junior position because he had not filled a position covered by the schedule. The Board decided that this man's seniority was not in the clerical group at St. Malo, and that in view of that fact he should be removed from the position of distribution clerk and the position again bulletined or awarded to the senior qualified applicant who held seniority rights under the schedule when it was bulletined in December, 1929.

### Case No. 108—Operating Department— Central Region

In the summer of 1932 a survey was made of all clerical work in the superintendent's offices at the locomotive and car repair shops in the Central Region. The company found that it was necessary to reduce the clerical staffs at these points, and to lay off a number of employees who were covered by the schedule. Under the new arrangement some of the work in the offices was done by chief clerks, accountants and timekeepers already in service, these men not being "schedule" employees. The employees claimed that work formerly performed by "schedule" employees should not have been given to non-schedule men, but the company pointed out that it was essential for the protection of its interest to retain these "non-schedule" employees in service, and that it reserved the right to have them fulfil any clerical duties assigned to them.

The Board found that the evidence did not indicate that this was a case arising from the application, non-application, or interpretation of the schedule in effect; and therefore decided that the case did not fall within the jurisdiction of the Board.

### Case No. 109—Operating Department— Central Region

In February, 1932, the company assigned to the switchtenders work formerly performed at Stratford by a lampman, the latter being a position covered by the schedule. The lampman's duties consisted of lighting, cleaning, and furnishing oil to 105 switch lamps and five double lighted semaphores, and replacing

broken glasses; these switch and semaphore lamps were distributed over trackage of approximately seven miles, the lampman being obliged to cover that territory each day. The employees contended that as the position of lampman was covered by the schedule for clerks, etc., the work should be performed by employees holding seniority rights under that schedule, and that the lampman in question should be paid at the schedule rate of 42 cents per hour for all time lost on this account. The company stated that a survey had been made of the staff at Stratford yard, it being found that the lampman's work could very well be done by switchtenders and track forces without detriment to the service. This was the practice at other points.

The Board decided that inasmuch as the work performed by the lampman still remained, the lampman should be reinstated in that position. But in view of the circumstances surrounding this case the claim for back-time was denied.

### Case No. 112—Operating Department— Atlantic Region

On a reduction in staff in the mechanical department at Bridgewater, N.S., an engine-house clerk, with seniority dating from 1917, was laid off, and the duties of his position were taken over by the fuel foreman. When laid off, this man claimed that he was entitled to exercise his seniority, in accordance with the provisions of Article 3, Rule K of the Schedule for Clerks and other classes of Employees, to the position of enginehouse clerk at Truro, then held by a junior employee. The Company claimed that he could not do so as the latter was a dual position, "engine-house clerk and fuel foreman," more than half the work of Truro being in connection with the duties of fuel foreman. The Company maintained that foremen in the mechanical department could be required to perform any work in connection with the department, including clerical duties, if such action should be considered advisable for the economical performance of the work. Such cases, in their view, were covered by Article 3, Rule B of the schedule.

The Board denied the claim of the employees.

### Case No. 113—Operating Department— Central Region

A clerk in a baggagemaster's office at Montreal was displaced on a reduction in staff. He then tried to exercise his seniority in accordance with Article 3, Rule K of the schedule, in regard to the position of bond clerk, which was held by another employee who was his

junior. It appeared that the latter employee was preferred by the United States Customs Officer, and the employees objected to such a pretext for interfering with the terms of the schedule. The Company however claimed that the bond clerk's duties were such that he was practically a railway employee assigned to assist the U.S. Customs Officer, whose representations could not be ignored.

After the hearing of the case it was intimated that a settlement had been effected by the parties concerned, and the Board assented to their request for its withdrawal.

#### **Case No. 116—Accounting Department—Headquarters**

A clerk in the office of the Auditor of Overcharge Claims in the Accounting Department complained of not being accorded seniority rights under the terms of Article 2, Rule L of the Headquarters Staffs Schedule. On the abolition of his position as one of the rate clerks he had been transferred to another position at the same salary although three rate clerks who were junior to him, were retained in their positions. About four months later he was demoted from his new position to one carrying less salary. He then protested to the auditor of overcharge claims, pointing out that junior employees were being retained on higher rated positions, and claiming the right to one of these positions. The company refused the request, pointing out that the clerk should, in accordance with the schedule rule, have protested promptly when he was first transferred to another position, whereas no protest from him had been filed.

The Board decided that a letter that had been addressed by the clerk in question to the Assistant Auditor of Revenues was to be considered as being an endeavour to exercise his seniority so as to displace a junior employee holding a position as rate clerk, and that he should now be permitted to exercise his option to the position of rate clerk.

#### **Case No. 117—Accounting Department—Headquarters**

A "milling-in-transit" investigator was displaced from his position and assigned to another position at a lower salary. When he was displaced he tried to exercise, under Article 2, Rule L of the Headquarters Staffs Schedule, his seniority rights to a position as rate clerk, but was refused the right to do so.

The Board found that the evidence submitted did not establish that the applicant had sufficient qualifications for the position of rate clerk claimed, and denied the contention of the employees that he was entitled to the position.

#### **Case No. 118—Accounting Department—Headquarters**

In this, as in the preceding case, the Board found that the seniority rights claimed by the applicant were not supported by sufficient qualifications for the position he sought—that of rate clerk—and the contention of the employees was therefore denied.

#### **Case No. 119—Accounting Department—Headquarters**

This case arose out of the decision of the Board in Case No. 99 (LABOUR GAZETTE, October, 1932, page 1052), which permitted the claimant, under Article 2, Rule L of the Headquarters Staffs Schedule, to exercise his seniority to any position held by a junior employee provided he had sufficient ability to perform the work of the position. In accordance with that decision the claimant sought a position as local rate checker but was refused his right to it as senior applicant.

The Board found that the claimant had attempted to exercise his seniority but had not been permitted to do so. It was therefore the decision of the Board that he should now be permitted to displace any junior employee in the Rate Department in a position which he might be qualified to fill.

Plans have been drawn up in Great Britain to organize milk producers into a country-wide association, with a Central Producers' Board that will exercise technical ownership over all milk produced and will have full powers to buy, sell, transport and manufacture milk. A Central Dairymen's and Manufacturers' Board is also proposed to control distribution and engage in manufacture, transportation and research. To co-ordinate the activities of these two bodies, a Joint Milk Council will be formed, on which both producer and manufacturer and the general public will be represented. The Joint Milk Council will be given power to fix prices, to establish grades and premiums for quality, and to make a levy to carry the expenses of the organization.

Gratifying results are officially reported by the International Nickel Company from the accident prevention policy which has been pursued by the management in the mining and smelting division of the company. The number of compensable accidents per 10,000 man-days during 1932 was 1.86 as compared with 2.85 in 1931, and 3.48 in 1930. The valuable assistance rendered by the staffs of the medical department in accident prevention is recognized by the president.

## STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1933

THE following table shows the number of disputes, workers involved and time loss for March, 1933, as compared with the previous month and the same month a year ago.

| Date           | Number of disputes | Number of employees involved | Time loss in working days |
|----------------|--------------------|------------------------------|---------------------------|
| *Mar. 1933...  | 10                 | 1,840                        | 12,945                    |
| *Feb. 1933.... | 5                  | 4,450                        | 58,500                    |
| Mar. 1932....  | 9                  | 1,395                        | 15,969                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for March is twice as great as that for February, 1933, but the number of workers involved and the time loss incurred show a substantial decline, the higher figures for these two items during the previous month being due to strikes of women's cloak and suit factory workers in Toronto, Ont., and Montreal, P.Q., in which some 3,800 workers were involved with a resulting time loss of 43,000 working days. As compared with March, 1932, while a slight increase appears in the number of disputes recorded and the number of workers involved, the time loss recorded is somewhat lower, strikes, involving coal miners in Alberta accounting for the higher figure during the month of March last year.

Information as to one dispute involving forty workers, which commenced on February 20, 1933, was not received in the Department in time for inclusion in the March issue of the LABOUR GAZETTE, but is now recorded as carried over from February, being unterminated at the end of that month. Five disputes, involving 715 workers, have, therefore, been carried over from February, and five disputes commenced during March. Of these ten dis-

putes, six terminated during the month, two resulting in favour of the employers involved, two in favour of the workers concerned, while in two cases a compromise settlement was reached. At the end of March, therefore, there were four disputes in progress which are recorded as strikes or lockouts, namely: coal miners, Medicine Hat, Alta.; women's clothing factory workers, Toronto, Ont.; coal miners, East Coulee, Alta.; and compositors, Winnipeg, Man.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to nine such disputes, namely: photo engravers, Toronto, Ont., commencing March 23, 1931, one employer; photo engravers, Toronto, and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; copper miners and smelter workers, Anyox, B.C., February 1, 1933, one employer; motion picture projectionists, Toronto, Ont., February 6, 1933, three employers; and motion picture projectionists, Saint John, N.B., March 6, 1933, one employer, the last three being added this month.

Disputes involving motion picture projectionists in three theatres in Toronto, Ont., during February have recently been reported. It appears that in each theatre two union employees were replaced by members of another union, the theatres being afterwards picketed for some time. As employment conditions are no longer affected the dispute is included in the list in the preceding paragraph.

A dispute involving employees in a custom tailoring establishment in Vancouver for several days in March has been reported, it being indicated that the men ceased work following a reduction in wages and secured an agreement providing for better terms. Full particulars as to the dispute have not yet been received.

A cessation of work for a day in a textile manufacturing establishment at Brantford, Ont., in protest against changes in conditions of employment has been reported as having occurred in March, concessions to the employ-

ees being made. Particulars as to the dispute have not been received.

A dispute involving motion picture projectionists in one theatre in Saint John, N.B., on March 6, 1933, has been reported. The employer discharged a union operator for alleged

negligence, and failing to secure his reinstatement the union withdrew the remaining union employee. In the meantime a local of another union had been organized to which the new theatre employees belonged. Owing to the small number of employees involved, this is

### STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1933\*

| Industry,<br>occupation and locality   | Number<br>of<br>workers<br>involved | Time<br>loss in<br>working<br>days | Remarks  |
|--|-------------------------------------|------------------------------------|--|
| <b>(a) Strikes and Lockouts in Progress Prior to March, 1933</b>   |                                     |                                    |  |
| LOGGING—<br>Tie makers (logging), Atikokan & Abiwan, Ont.....  | 40                                  | 500                                | Commenced Feb. 20, 1933, for increase in wages, improved working conditions and recognition of union; terminated by March 31, 1933; in favour of employer. |
| MINING, NON-FERROUS SMELTING<br>AND QUARRYING—<br>Coal miners, Medicine Hat,<br>Alta.....  | 25                                  | 500                                | Commenced Jan. 23, 1933, against reduction in wages; untermiated.  |
| Copper miners and smelter<br>workers, Anyox, B.C.....  | 150                                 | 2,000                              | Commenced Feb. 1, 1933; for increase in wages and decrease in board; employment conditions no longer affected by end of March; in favour of employer.      |
| MANUFACTURING—<br><i>Textiles, Clothing, etc.—</i><br>Women's clothing factory<br>workers (cloaks and suits),<br>Toronto, Ont..... | 300                                 | 5,000                              | Commenced Feb. 7, 1933, for agreement with 40-hour week and partial restoration of wage decreases; untermiated.  |
| Women's clothing factory<br>workers (cloaks and suits),<br>Montreal, P.Q.....  | 200                                 | 2,000                              | Commenced Feb. 16, 1933; for new agreements, enforcement of existing agreement being unsatisfactory; terminated March 15, 1933; compromise.                |
| <b>(b) Strikes and Lockouts Commencing During March, 1933</b>  |                                     |                                    |  |
| MINING, NON-FERROUS SMELTING<br>AND QUARRYING—<br>Coal miners, East Coulee,<br>Alta.....   | 120                                 | 60                                 | Commenced March 9, 1933; for payment of wages due; terminated March 9, 1933; in favour of workers.   |
| Coal miners, East Coulee,<br>Alta.....   | 120                                 | 1,000                              | Commenced March 10, 1933; for payment of wages due; untermiated.   |
| MANUFACTURING—<br><i>Textiles, Clothing, etc.—</i><br>Textile factory workers, Louiseville, P.Q.....                               | 800                                 | 1,600                              | Commenced March 10, 1933; against decrease in wages; terminated March 20, 1933; in favour of workers.  |
| Textile factory workers, Hamilton, Ont.....  | 70                                  | 35                                 | Commenced March 24, 1933; against dismissal of foreman; terminated March 24, 1933; compromise.   |
| Printing and Publishing—<br>Compositors (job), Winnipeg,<br>Man.....   | 15                                  | 250                                | Commenced March 13, 1933; against reduction in wages; untermiated.   |

\* In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

recorded as a minor dispute and as employment conditions are no longer affected it is included in the list of such disputes not declared by the union to be terminated.

A number of disputes are reported from time to time involving men on unemployment relief work, receiving subsistence for which some work is performed or may be required. As no relation of employer and employee is involved, these are not included in the record. A strike of men engaged on unemployment relief work for the city of Sherbrooke from March 23, 1933, to March 28, 1933, has been reported, the men objecting to an increase in hours from eight per day to nine, without an increase in the allowance credited against the relief received, and a compromise was arranged on the latter point. Regular civic employees were involved in the same dispute but did not cease work, referring the dispute to arbitration. The municipality had changed the terms of employment from thirty cents per hour, eight hours per day, to twenty-five cents per hour, nine hours per day.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

**TIE MAKERS (LOGGING), ATIKOKAN & ABIWAN, ONT.**—This dispute, not reported in the last issue of the *LABOUR GAZETTE*, commenced on February 20, 1933, when about forty tie-makers employed by one logging contractor ceased work, demanding an increase in wages (piece rates), improved working conditions, and recognition of the Lumber Workers' Industrial Union of Canada. It is reported that the employer had resumed operations by the end of March, and the dispute has been recorded as terminated.

**COPPER MINERS AND SMELTER WORKERS, ANYOX, B.C.**—As stated in the March issue of the *LABOUR GAZETTE* regarding this dispute, which commenced on February 1, 1933, when about four hundred out of approximately nine hundred employees in the mines, mill and smelter of one company ceased work in order to secure a restoration of a wage decrease and a reduction in the rates for board and rent, operations were partially resumed during February. The company had announced a reduction in board and rent. Most of the strikers had been employed in the mines and work there was resumed by new employees and men from the mill and smelter, so that by February 21 the establishment had resumed operations to a great extent. By the middle of March the smelter had been reopened, and by the end of March all departments were reported to be operating with a full staff. The Mine Workers' Union of Canada reported the

strike as still in progress and was picketing the docks at British Columbia ports, and the strike has been included in the list of disputes not called off although employment conditions are no longer affected.

**WOMEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.**—As stated in the March issue of the *LABOUR GAZETTE*, a large number of the firms affected by this dispute had resumed operations by the end of February, having signed individual agreements with the International Ladies' Garment Workers' Union (*LABOUR GAZETTE*, March, 1933, pp. 275 and 332). During March most of the remaining firms also signed similar agreements, but in three or four establishments work was resumed under conditions as prior to the dispute. At the end of the month one establishment, with seventy-five workers, was still involved, and the dispute is therefore recorded as unteminated.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), MONTREAL, P.Q.**—By the beginning of March forty-five of the sixty-five establishments involved in this dispute had signed individual agreements with the International Ladies' Garment Workers' Union (*LABOUR GAZETTE*, March, 1933, pp. 275 and 332), and on March 15, 1933, most of the remaining firms having signed similar agreements, the dispute was called off by the union. About one hundred of the strikers had not been re-engaged but were to be absorbed as places became available.

**COAL MINERS, EAST COULEE, ALTA.**—Two disputes have been reported, miners in one colliery ceasing work for one-half day to secure payment of wages due and securing their demands, while in the other mine payment was not made and at the end of the month the dispute was still in progress.

**TEXTILE FACTORY WORKERS, LOUISEVILLE, P.Q.**—Silk weavers, etc., in one textile factory in Louiseville, P.Q., ceased work on March 10, 1933, demanding the withdrawal of a decrease in wages announced by the employer on the day previous and reported to be the third reduction within a year. The strikers stated that this third reduction amounted to twenty-five per cent of their earnings and brought the total decrease in the year to as much as forty-five or fifty per cent. The employer, however, stated that the last reduction amounted to only seven and one-half per cent. The plant was picketed by the strikers and a detachment of provincial police was stationed in the town, but no serious disturbance was reported. Negotiations between the parties involved were arranged and attended by a

representative of the provincial Department of Labour, with the result that the strikers returned to work pending the findings of a Council of Arbitration under a provincial statute. This Council reported on March 29 that the last reduction in wages should be cancelled, and that the employees should be paid the difference in rates since the reduction was put into effect; also that wages should be raised for certain employees. The text of the award is given on page 378.

**HOSIERY FACTORY WORKERS, HAMILTON, ONT.**—Employees in one department in one establishment in Hamilton, Ont., ceased work on March 24, 1933, protesting against the dismissal of a foreman, stated to be the result of the introduction of an efficiency system. A meeting was held between the employer and the strikers at which it was arranged that the

discharged foreman would be re-employed if and when a vacancy became available in another department. Work was, therefore, resumed the following day.

**COMPOSITORS, JOB OFFICE PRINTING, WINNIPEG, MAN.**—The proprietors of one job printing office in Winnipeg had proposed a reduction in wages, and later that part of the plant should be operated below union rates; and on the refusal of the employees, members of the union, to agree, notified them that the establishment would be non-union from March 14, thus depriving union members of their positions. The union has stated that negotiations with other employers were being carried on and that a separate arrangement with one employer could not be made in advance. At the end of the month the dispute had not been terminated.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

### Great Britain

During February, 28 disputes began and 9 were still in progress from the previous month, making a total of 37 disputes in progress during the month, involving 11,400 workers with a time loss of 106,000 working days for the month.

Of the 28 disputes beginning in February, 15 were over proposed wage reductions and other wage questions, 7 were on questions respecting the employment of particular classes or persons, 3 over other questions of working arrangements, and 3 on questions of

trade union principle. Settlements were reached in 27 disputes, of which 9 were in favour of workers, 7 in favour of employers, 11 ended in compromises; in two other disputes, work was resumed pending negotiations.

The strike of railway employees in Northern Ireland mentioned in the last two issues of the *LABOUR GAZETTE*, was reported to have been settled April 6, subject to ratification by the union.

A strike involving between 7,000 and 8,000 workers in an automobile manufacturing plant at Dagenham began March 27 against wage reductions and was settled two days later by a compromise as to the wage scale.

### France

The number of strikes beginning in the year 1929 was 1,213 involving 239,878 workers with a time loss of 2,764,606 working days.

Figures for the second quarter of the year 1932 show 40 strikes beginning in April involving 3,342 workers, 34 strikes in May involving 1,684 workers, and 34 strikes in June involving 3,584 workers.

### Germany

The number of disputes in the second quarter of 1932 was 136 involving 1,216 establishments and 19,913 workers with a time loss of 305,584 working days for the period. In the third quarter of the year there were 124 disputes involving 210 establishments and 22,855 workers with a time loss of 170,402 working days.

### Latvia

The number of strikes reported for the year 1932 was 19, involving 4,400 workers with a time loss of 22,960 working days for the year.

### Netherlands

The number of disputes which were in existence during the year 1932 were 214 involving 917 establishments and directly involving 30,400 workers, with a time loss of 1,787,000 working days.

### Switzerland

The number of disputes reported for the year 1932 was 38, involving 198 establishments and 5,083 workers, with a time loss of 159,154 working days for the year.

### United States

The number of disputes beginning in January was 52 and 43 were in effect at the end

of the month. The number of workers involved in disputes in effect at the end of the month was 8,210, with a total time loss of 182,073 working days for the month.

Three strikes of shoe factory workers in Massachusetts were in progress during March. A strike at shoe factories at Lynn began February 25 and involved in all about 6,000 workers. A settlement was reached March 9 by which employers agreed to negotiate with the union for future wages and working conditions. A strike at Haverhill involving 7,500 workers began March 6 and ended March 26, when it was reported employers agreed to the union demands for increased wages and improved working conditions. A strike involving 7,000 workers at Boston began March 15 also for union recognition and increased wages, but no further report has been noted.

## Pensions on Canadian Railways in 1932

The annual report of the Canadian Pacific Railway Company for 1932 contains a statement of the company's pension department, which shows that 2,151 former employees were on the pension roll at the end of the year. Of these pensioners, 1,130 were over 70 years of age, 980 were between 60 and 70, and 41 were under the age of 60 years. Pension payments during the year amounted in all to \$1,431,996. (An outline of the company's pension plan was given in the *LABOUR GAZETTE*, April, 1928, page 381.)

The annual report of the Canadian National Railway system for the same period states that under the provisions of the Canadian National Railways' Pension Act (non-contributory), there were retired during the year 734 employees. The number deceased in 1932, who were in receipt of pension, totalled 226. The total number receiving pension under this Act was 3,001 at the end of 1932. Under the regulations of the Grand Trunk Railway of Canada Superannuation and Provident Fund Association (a contributory fund which was closed to new members in 1908), 38 members of the staff were retired during the year 1932. The number of members deceased during the year was 6. The number in receipt of superannuation under this fund was 144 at the close of the year. Under the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act (a contributory plan, closed to new members in 1929) there were retired during the year 223 members of the staff. The number deceased during the year who were receiving superannuation under this Act totalled 87. The number in receipt of

superannuation from this fund totalled 1,536 at December 31, 1932. (The Grand Trunk Pension plan was outlined in the *LABOUR GAZETTE*, January, 1924, page 33, and the Intercolonial plan in the issue of January, 1925, page 27. Subsequent legislation affecting the pension system was noted in the *LABOUR GAZETTE*, June, 1929, page 602, etc.)

Speaking in the Nova Scotia legislature on March 23 the Hon. Gordon S. Harrington, provincial premier, referred as follows to the subject of unemployment insurance: "Unemployment insurance," he said, "is a matter of a highly technical character. It has been examined very fully; it has been adopted in many countries; it has been adopted in most of the countries of Europe. This subject was recently discussed at Ottawa, and I think quite properly discussed, because, after all, I think the State has some responsibility towards these people and it cannot allow them to starve, and the organized way to care for them is preferable to a haphazard way. The outcome of that conference was to establish that there is a division of legislative authority throughout the Dominion and to put the measure into effect was a Dominion matter and required the surrendering of certain rights by the Provinces, and some of the Provinces have been hesitant to surrender their rights. This was particularly true with respect to Quebec. The difficulty at the present time is to find some way of overcoming the division of jurisdiction, and so the matter of unemployment insurance was quite properly discussed at Ottawa."

## FIRST ANNUAL REPORT OF DEPARTMENT OF LABOUR OF THE PROVINCE OF QUEBEC

THE annual report of the Minister of Labour of the Province of Quebec for the fiscal year ending June 30, 1932, reviews the administration of the Labour Department Act, under which the Department was established as a separate entity by legislation enacted in 1931 (LABOUR GAZETTE, May, 1931, page 528). The present report is the first to be issued by the distinct provincial Department of Labour, previous reports being published by the former joint department of Public Works and Labour. By Order in Council under date of October 22, 1931, the Labour Department Act came into effect, and the new department was organized in the following month. The administrative duties of the former joint department were re-allocated and the jurisdiction of the Minister of the Department of Labour was defined. The Minister is charged with the duty of instituting and controlling inquiries into important industrial questions as well as into labour conditions and may collect statistics relating thereto and transmit them to the Quebec Bureau of Statistics. He also has charge of the carrying out of any Acts respecting riots near public works; disputes between employers and employees; municipal strikes and lockouts; employment bureaus; minimum wages for women; safety in public buildings; inspection of scaffolding; protection of the public from fire; installation of lightning rods; safety and inspection of industrial establishments; stationary engineers; weekly day of rest for industrial employees; labour accidents; Workmen's Compensation Commission; and, generally, every thing concerning artisans, workmen, day and manual labourers.

**Factory Inspection.**—The report of the chief inspector of the inspection service of industrial establishments and public buildings indicates that during the year 1,308 inspections were made in the Montreal district, 755 in the Quebec district and 132 in the Eastern Townships, making a total of 2,195.

**Accidents and Accident Prevention.**—In the report of the chief inspector reference is made to the co-operative endeavours of the various sections of the department to ensure the protection of human life. Any non-posting of the orders of the Workmen's Compensation Commission and the Minimum Wage Commission was reported to the body concerned. Certain refractory employers who neglected the regulations of the Compensation Commission were brought into court. The same close inspection and co-operation was carried out in connection

with the Board of Stationary Engineers and the Board of Examining Electricians.

The total number of accidents reported to the departmental inspectors during the year was 893, of which 50 were fatal. However, the report of the Workmen's Compensation Board indicates a total of 13,204 compensable accidents. The difference is due to the fact that many employers do not report accidents to the inspection bureau, and it is explained that the department now completes its accident information by daily reports from the compensation commission.

The chief inspector summarizes the result of the investigation into the explosion of the oil tanker, *Cymbeline*, which caused 26 deaths. The cause of the disaster is attributed to the storing of a certain quantity of oil in the pontoons of the dry dock, instead of storing it in tank cars and moving it away as had been done previously.

**Registration of Children.**—Dealing with the registration of children in employment, it was reported that the number of girls and boys between 14 and 16 years of age registered in the Montreal office during the year was 1,856 and in the country, 77, making a total of 1,933 children registered in the twelve months. The total registration since the coming into force of the Act, that is from March, 1920, to the 30th of June, 1932, was 33,854 for Montreal Division.

**Overtime Permits.**—The inspector in reporting upon the requests of employers for permits to work girls and women beyond the regular hours, states that a total of 103 such applications were granted under the Industrial Establishments Act. These permits are granted only under exceptional circumstances. The applications granted were: laundries, 10; textile industries, 2; shoemaking, 8; confectioneries, 16; needlework, 23; sundry, 7; together with 37 permits for textile and dressmaking firms in the Eastern Townships. There were 52 applications refused. Commenting on the applications for overtime permits, the Deputy Minister observes as follows:—

"It is seen by their reports that the inspectors are astonished that nearly everywhere industries subject to the 55 hours enactment ask permission for overtime work. In the hard times, when so many are idle, this seems an abuse. In the districts of Montreal and the Eastern Townships, 103 permits were granted; a considerable number were refused. In each instance, the inspectors investigate and try to have the industry make a better distribution

of work. Orders are badly distributed by the trade, which in its turn is the victim of the requirements of consumers. In any event, no overtime permit was given without serious investigation."

The chief inspector reports that 243 complaints were received during the year. Each complaint was investigated and it was found that in 186 cases the complaint was justified. Recommendations were then made to these employers to take remedial action. The complaints were classified as follows: Working hours in factories, laundries, etc., 47; night work of girls and women in industries, necessitating visits by inspectors at night, 8; movies given in school rooms, 17; theatrical shows in moving-picture halls, 26; defective fire-escapes, 31; non-observance of weekly day-of-rest in hotels and restaurants, 36; sanitary conditions in industrial establishments, 28; difference of wages paid on contracts for the Department of Public Works, 23; children under 14 in industrial work, 14; employers refusing to pay workmen leaving without notice, 7; unfair wages paid to employees, 6.

In addition to the inspection of industrial establishments, there was a total of 539 inspections of public buildings. As a result, in the Montreal district alone, the inspectors had 30 fire-escapes installed.

*Stationary Engineers.*—The Board of Examiners of Stationary Engineers is charged with the administration of the Stationary Engineers Act, certain provisions of the Industrial Establishments Act and regulations relating to heating systems. The Boiler Inspection Bureau, in addition to the inspection of boilers, pressure apparatus, etc., examines and registers plans of same. Under the Stationary Engineers Act, examinations of engineers are conducted and certificates issued.

*Board of Examining Electricians.*—The Electrical Installation Branch is responsible for the enforcement of the Public Fire Protection Act and Lightning Rod Act. The statistics presented indicate that nearly 100,000 inspections were made in the province under the former Act and 3,347 under the latter.

*Provincial Employment Bureaus.*—A summary of the operations of the eight provincial employment bureaus by the general superintendent covers the year's work as follows: applications, 68,445; vacancies, 19,437; references, 26,526; placements, 17,414. The superintendent reported that "the past year was one of the most difficult ever experienced in the Service," decreased industrial activities being general. As a result of recent legislation all private employment bureaus have been closed.

A new feature which commenced last year was the issuance of permits to free employment bureaus. These are issued to religious and charitable organizations, labour bodies, etc., and a total of 412 such permits were authorized during the year.

The reorganization of the provincial employment service resulted in the establishment in the Montreal Men's Bureau of a section devoted to entirely serving shop and office employees.

*Fair Wages.*—The report of the divisional fair wages officers outlines the activities with respect to enforcing the provincial minimum wage schedule in government contracts.

*Trade Disputes and Conciliation.*—The report of the registrar of conciliation and arbitration councils reviews the proceedings of the year in the settlement of disputes. The registrar also outlines the new legislation making effective the application of the Dominion Industrial Disputes Investigation Act. Labour difficulties during the year chiefly centered about wage reductions.

The deputy minister refers to the publication of the reports of the Social Insurance Commission which were reviewed in the *LABOUR GAZETTE* for February, 1933, page 161; August, 1932, page 861; and February, 1932, page 171.

In an appendix, extracts are given from the report of the Hon. C. J. Arcand, Minister of Labour, who represented the Province of Quebec and was technical adviser of the Dominion Government's delegate to the 16th International Labour Conference.

The City Council of Vernon, British Columbia, adopted the following resolution in March, this action being taken in support of suggestions submitted by representatives of the allied packing houses of the Okanagan Valley: "Inasmuch as the machinery for adjustment of the minimum wage for female help is very cumbersome, necessitating the hearing of arguments for and against same and involving sixty days' notice of any change, that the regulations affecting this phase of the Minimum Wage Board's work should be amended to permit the board to raise or lower the minimum wage of their own volition if and when convinced of the justice of such a procedure, and that the time notice should be reduced, and that the board itself should be reconstituted on a five-member basis, including a representative of labour, a representative of the manufacturers, and a representative of the fruit and vegetable industries."

## Women's Minimum Wages in the Province of Quebec, 1931-32

Included in the report of the Quebec Department of Labour is the sixth annual report of the provincial Women's Minimum Wage Board, which reviews the administration of the Act during the year ending June 30, 1932.

The Board's report states that owing to the present depression it was not considered expedient to issue new enactments, "experience having taught that it is preferable to require strict observance of the enactments made than to imperfectly cover a wider field." However, the Commission intimates that it has not abandoned the idea of applying the Women's Minimum Wage Act to all industries employing female labour, and that with the return of normality new enactments will be made as circumstances warranted. In fact, the deputy minister in his preface states that "for some months the Commission has been investigating commercial establishments with a view of issuing later an enactment on behalf of girls and women having commercial employments." The Commission itself states that "in view of the numerous complaints which the Commission has received concerning wages and employment conditions in commercial establishments, it is now investigating, and when the investigation is ended, a joint conference will be called and an enactment made covering all commercial establishments employing at least ten persons of either sex."

At present there are 23 enactments in effect, covering 924 industrial establishments employing 31,135 workwomen and apprentices. These orders now apply in the following industries: laundries, dye works and dry cleaning establishments; printing in all its branches; textile trades and all allied processes; boot and shoe and leather manufacture; clothing in all its classifications; tobacco, cigar and cigarette manufacture; and the fur industry. Some of the problems of administration during a period of acute depression are referred to by the Commission in the following paragraphs:—

"Several requests have been made to reduce the scale of minimum wages. The Commission refused this for two reasons: one, that the requests were from the employers individually and were not made in accordance with the law which permits an annual revision of any enactment; the other, that the Commis-

sion does not deem the minima too high and that with the reduced working hours in almost all industries, the actual wage which the workwoman receives hardly permits her to meet her living expenses, and in many instances does not. To further reduce the basis of minimum wages would place many workwomen in want and destroy, at one blow, all the good accomplished by this legislation.

"To meet special cases and prevent, as far as possible, workwomen who, having completed the apprenticeship period, from losing their employment and being replaced by new apprentices or young boys leaving school, the Commission issues three or six months' permits authorizing them to perform minor operations, requiring little or almost no experience, at a lower rate of wages than that to which they are entitled. However, in no event, is a permit granted for a lower wage than the minimum rate established for an apprentice in her first six months of employment in the trade, namely \$7 a week in Montreal, \$5 and \$6 for the rest of the province. The number of such permits was 367 last year, as against 94 the previous year. In several instances, where a new industry started in a rural centre, the application of the enactment governing it or one or several of its clauses were suspended for a stated period. Therefore, owing to the possibility of meeting exceptional situations, it would be bad policy to seek to reduce the minimum wage.

"For some time, the Commission has had to face a fresh difficulty which tends to spread: the replacing of apprentice men and women by young boys leaving school, whose ages vary from 14 to 18, to do work requiring little experience. As the Minimum Wage Act applies only to females, these young boys are hired at ridiculous prices. We found instances where they were paid as low as one dollar a week, although the average is from three to five dollars. They work for six months or a year and when they apply for an increase in wages, are immediately discharged and replaced by others who go through the same experience later. If, indeed, these boys had an opportunity to learn a trade, by sacrificing a few months at low wages, it would only be half bad; but this is of rare occurrence, they

are kept doing the same thing which will never allow them to earn a sufficient wage to live and their future is ruined, for, when older, all they will be fit for is to do day labour instead of being expert workmen. The Commission deems it its duty to draw the attention of legislators to this new departure in the industrial life of our province and to eradicate it by amending the Minimum Wage Act to the effect that no workman or apprentice shall receive a lower wage than the minima fixed for girls or women employed in the same industry. This was adopted in Manitoba and is under consideration in other provinces."

As regards the number of permits (referred to in the foregoing), the Commission points to the large increase (273) over last year and states "undeniably, certain employers take advantage of the least excuse to avoid paying the periodical increases in wages required by the enactments, as the experience of the women develops; others threaten with dismissal the somewhat aged or naturally slow women, unless they obtain permits from the Commission. Each case necessitates investigation so that handicapped women be efficiently protected. We maintained the decision previously taken, to not grant permits generally and all applications have to be signed by the workwomen themselves, either in the Commissioner's office or before an inspector."

During the year, 1,251 inspections and investigations were made. These indicated that there were 111 establishments which had ceased to operate and 76 new firms or plants not previously listed. As a result of complaints and official investigations, 130 violations of the Act were discovered and satisfactorily adjusted. Action was taken against several offending employers. In all cases except one (when the maximum penalty of \$100 and costs was imposed) the suits were settled out of court upon the promise of the employer to indemnify the plaintiff. Through official intervention 30 claims for wages were settled, the Commission collecting the differences in wages (amounting to a total of \$572.52 on behalf of the workwomen. In several other instances direct action was taken by the workwomen to recover wage differences, with successful results in nearly every instance.

The investigations revealed some misconceptions of the Act, concerning which the Commission states: "The work of verification and inspection is arduous but necessary, for it revealed—especially when the system was being introduced—many violations of the Minimum Wage and Industrial Establishments Acts. Some employers keep no book of working hours for women working by the piece; others, however extraordinary it may seem, do not

even know the names of their employees, satisfied to call them by any Christian name or a nickname or a reference number corresponding to that of the time-clock; others, lastly—and fortunately few in number—knowingly falsify their report, the wage stated not corresponding with that actually paid, nor the hours of work or length of experience; all such violations can only be discovered on complaints by the workwomen themselves or by repeated and unexpected inspections. We think that in time and the making of examples, those concerned will understand that it is useless to try to elude the Minimum Wage Act. Both employers and employees have to be taught, but we hope to succeed in time."

While acknowledging that the basic wages have been maintained, due—the commission points out—to the efficiency of its inspection service, it is admitted that the wages actually received by women have fallen off owing to reduced hours of work and wage reductions higher than the minima. During the year, the total wages of the 31,135 workwomen covered by the Act diminished by \$27,267.42—an average reduction of \$1.15 per workwoman per week in Montreal and of 45 cents in the rest of the province. The industries in which the greatest reductions occurred were the sewing trades, printing, shoemaking and tobacco industries, the others remaining about stationary. The chief statistics for 1932 respecting each industry under the Act are summarized as follows:—

*Laundries and Dye Works.*—For the city of Montreal—number of firms employing workwomen, 47; number of women employed, 1,322; average weekly wage, \$12.28; For the rest of the province—number of firms, 24; number of women employees, 300; average weekly wage, \$9.45. The average weekly wage per woman was lower by 24 cents in Montreal and 17 cents in the rest of the province as compared with 1931.

*Printing Industry.*—For the city of Montreal—number of firms, 106; number of women employed, 813; average weekly wage, \$11.92. For the rest of the province—number of firms, 29; number of women employed, 199; average weekly wage, \$9.03. The reduction in average weekly wages was \$1.27 in Montreal and 79 cents in the rest of the province.

*Textile Industry.*—For the city of Montreal—number of firms, 15; number of women employed, 2,364; average weekly wage, \$13.25. For the rest of the province—number of firms, 33; number of women employed, 6,281; average weekly wages, \$11.50. The reduction in average weekly wages was 20 cents in Montreal and 83 cents in the rest of the province.

*Leather Industry.*—For the city of Montreal—number of firms, 61; number of women employed, 2,014; average weekly wage, \$13.87. For municipalities over 3,000 population—number of firms, 35; number of women employed, 1,100; average weekly wage, \$11.12. For municipalities under 3,000 population—number of firms, 19; number of women employed, 371; average weekly wage, \$8.53. The reduction in the average weekly wage in Montreal was 75 cents; in municipalities over 3,000, 62 cents; in municipalities under 3,000, 19 cents.

*Clothing Industry.*—For the city of Montreal—number of firms, 165; number of women employed, 2,495; average weekly wage, \$12.96. For the rest of the province—number of firms, 18; number of women employed, 903; average weekly wage, \$9.77. The reduction in the average weekly wage was 34 cents in Montreal but in the rest of the province there was an increase of 59 cents. (This comparison is with the year 1930).

*Hat and Cap Factories.*—For the city of Montreal—number of firms, 42; number of women employed, 872; average weekly wage, \$14.29. The average weekly wage increased 20 cents per employee as compared with 1930.

*Women's and Children's Dresses, Etc.*—For the city of Montreal—number of firms, 98; number of women employed, 3,045; average weekly wage, \$12.26. The reduction in the average weekly wage since 1930 was \$1.35.

*Manufacturers of Overalls, Mackinaws, cotton and rayon underwear, etc.*—For the city of Montreal—number of firms, 39; number of women employed, 3,251; average weekly wage, \$11.13. For the rest of the province—number of firms, 27; number of women employed, 1,230; average weekly wage, \$10.52. The increase in the average weekly wage was 35 cents in Montreal; and \$1.03 in the rest of the province.

*Tobacco, Cigar and Cigarette Industry.*—For the city of Montreal—number of firms, 22; number of women employed, 2,945; average

weekly wage, \$12.59. For the rest of the province—number of firms, 22; number of women employed, 870; average weekly wage, \$10.14. The reduction in the average weekly wages was 19 cents in Montreal and 84 cents in the rest of the province.

*Fur Industry.*—For the city of Montreal—number of firms, 93; number of women employed, 515; average weekly wage, \$15.30. For the rest of the province—number of firms, 29; number of women employed, 245; average weekly wage, \$10.87. The reduction in the average weekly wage was 58 cents in Montreal, but the average increased by 45 cents in the rest of the province.

In concluding its report, the Commission comments as follows upon the protection afforded by the Act:

"We have had the active co-operation of both employers' and workwomen's associations. The best element of the employer's class realizes that minimum wage legislation does not merely protect the workwomen but stabilizes cost, puts a check on the unfair and dishonest competition of certain employers who miss no opportunity to reduce wages and who flood the market with articles produced under regrettable conditions, a constant menace to the health of future mothers and the future generation.

"In inspecting, we found distressing cases which—if made public—would rouse the conscience of all interested in the welfare of the working class and future of our race. Through the co-operation of the industrial establishment inspection department—which is our strong support—we have put an end to crying injustices. We are working together to purify the atmosphere in the manufactories and workshops, to render working conditions less exhausting and to secure for workwomen a wage enabling them to live decently. We certainly do not claim to have succeeded in suppressing all exploiting of workwomen in industry of which they are so often victims but think that we have improved the situation in spite of the hard times and shall continue our efforts."

### Changes in Assessment Rates levied on Employers in Ontario by Workmen's Compensation Board for 1933

The adjusted rates of assessment for the year 1932 and the provisional rates for 1933 have recently been published by the Ontario Workmen's Compensation Board. These rates are charged against industries operating under the Act. The Board explains the method of rating as follows:—

"For assessment and compensation purposes under the Act the industries covered are

divided into 24 classes. Each class stands upon its own footing and carries its own burden except that a very small general fund, known as the Disaster Reserve, is set aside to assist in meeting any extraordinary call that may rise in any class. With the exception of this Disaster Reserve the moneys collected are just what are considered necessary to take care of the accidents that have actually happened.

Separate accounts are kept of all assessments received and all compensation and medical aid awarded for each of these classes. Each of the 24 classes of industry is thus in effect a mutual insurance association of the employers in that class.

"The rates for each class are fixed and the assessments made much in the same way as a municipality levies its taxes. They are governed by the requirements. The rates fixed for the year are intended to cover the burden for that year. At the beginning of the year each employer is required to furnish the Board with an estimate of his probable pay roll for the year and he is assessed provisionally upon that estimate. At the end of the year the actual amount of pay roll is ascertained and the assessment is adjusted accordingly, the rate provisionally fixed being also altered where the accident experience shows this to be necessary.

"The rates are fixed in accordance with the accident experience. . . . If it is seen that the rate charged has produced just sufficient money, or if the surplus or deficit is small, the rate will be maintained. If there is any considerable difference, it will be increased or decreased accordingly."

The assessment rate is levied on \$100 of pay roll. The principal increases in the provisional

rates for 1933 over the adjusted rates for 1932, in various industries, were as follows:—

|   | FROM             |  |
|---|------------------|--|
| Logging, woods operations, river-driving, etc. . . . .            | \$4 50 to \$5 00 |  |
| Sawmills, shingle mills, etc. . . . .                             | 3 00 to 3 50     |  |
| Cooperage stock, spokes or veneer manufacture. . . . .            | 3 00 to 3 50     |  |
| Gold mining. . . . .  | 2 50 to 3 00     |  |
| Refining of nickel as a business. . . . .                         | 75 to 80         |  |
| Gunpowder, dynamite, high explosives, manufacturing, etc. . . . . | 4 00 to 5 00     |  |
| Rolling mills or steel work . . . . .                             | 50 to 75         |  |
| Iron smelting. . . . .  | 1 00 to 1 25     |  |
| Metal sanitary ware manufacture                                   | 90 to 1 00       |  |
| Incandescent lamps, radio tube manufacture increased. . . . .     | 00 to 50         |  |
| Rubber tires, belting, hose manufacture, etc. . . . .             | 20 to 25         |  |
| Flax mills or flax manufacture                                    | 50 to 60         |  |

Decreases in assessment rates in various classes were as follows:—

|   | FROM             |  |
|---|------------------|--|
| Operations in logging, sawmills, etc., on a small scale. . . . .                    | \$9 00 to \$8 00 |  |
| Pulpwood logging, etc., where the annual pay roll does not exceed \$10,000. . . . . | 6 00 to 5 50     |  |
| Pulp mills and fibre board manufacture. . . . .                                     | 1 75 to 1 60     |  |
| Pulp and paper mills. . . . .   | 1 65 to 1 50     |  |
| Mining, not otherwise specified. . . . .  | 3 50 to 3 00     |  |
| Agricultural implements manufacture. . . . .  | 1 10 to 1 00     |  |
| Printing and publishing. . . . .  | 20 to 15         |  |

## MOTHERS ALLOWANCES IN NOVA SCOTIA

THE operation of Mothers' Allowances in Nova Scotia during the first two complete years' operation of the legislation, is reviewed in the report of the director for the year ending September 30, 1932. "It is unquestionable," he states, "that many homes have been kept intact which, without the allowance, would have been broken up and the mother and children separated. It is also clear from the visitors' reports and the school reports which we receive twice each year, that the school attendance of the children receiving aid is greatly improved. The children are receiving a better school education. That the health of many mothers and children has been greatly improved is very clearly shown by the letters and reports received as well as by the statements of doctors, clergymen, and others. There is good reason to believe that the Mothers' Allowances have been a very potent factor in health improvement."

The director notes an improvement in the morale of the beneficiaries, and denies the charge that mothers' allowances tend to make certain families less thrifty and less thoughtful for the future during the lifetime of the father. The relief burden upon the poorer districts and municipalities was considerably reduced as the result of allowances.

The statistics show that the total amount paid in allowances during the second fiscal year was \$331,336.72 as compared with \$310,602.04 during the first year. Comparative figures for the first and second years are as follows:—

Average monthly amount paid each family—\$29.95 in 1931 and \$29.27 in 1932.

Total cost of administration—\$22,744.07 in 1931 and \$16,824.56 in 1932.

Total number receiving maximum allowances—32 in both years.

Total number of families aided—1030 in 1931 and 1101 in 1932.

Total number of dependent children in families aided—3,197 and 3,802.

Of the applications approved by the director during the year, the number of mothers with one child was 34; with two children, 60; with three children, 35; with four children, 20; with five children, 20; with six children, 17; with seven children, 6; and with eight children, 5.

The total number of cancellations during the year was 182, of which number 17 were renewed.

The sums required for the payment of Mothers' Allowances for the year ending September 30, 1933, is estimated at \$335,000, the total amount required in connection with the Act during the current year being estimated at \$351,900.

## ANNUAL CONVENTION OF NEW BRUNSWICK FEDERATION OF LABOUR

THE twentieth annual convention of the New Brunswick Federation of Labour was held at Fredericton on February 28 and March 1 and 2. At its opening session, the convention was addressed by the Hon. C. D. Richards, Prime Minister and Attorney General of New Brunswick. The Premier appealed to the convention not to ask the government to enact or implement legislation which would have the effect of adding to the tax burden at the present time. Three years ago, he said, it was hoped that the Acts providing Old Age Pensions and Mothers' Allowances would be put into effect, but new financial undertakings of any kind were impossible at the present time.

Others who spoke before the convention at various times were— Hon. Dr. H. I. Taylor, Minister of Health and Labour; Hon. Mr. E. A. Reilly, Chairman, Provincial Power Commission; Hon. Mr. A. A. Dysart, Leader of the Opposition; Mr. J. A. Sinclair and Mr. E. R. Steeves, Chairman and Vice Chairman, Workmen's Compensation Board; Mr. W. E. Best, Dominion Legislative Representative of the Locomotive Firemen and Enginemen; Mr. Frank Caine and Mr. S. H. Shaw, Chairman and Secretary of the Joint Provincial Legislative Board of the Transportation Trades.

*Workmen's Compensation.*—Twenty resolutions were submitted requesting amendments to the Workmen's Compensation Act. These were as follows:—

Three requesting that the definition of "average earnings" be changed; four requesting an increase in the weekly minimum compensation; two requesting the extension of the time limit for making application for compensation from six to twelve months; two requesting that the limit of payments for permanent partial disability be removed; and the remainder requesting the following changes: That employers employing one or more employees be included under the Act; that city policemen and permanent firemen be covered by the Act; restoring to the Board the right to reconsider "any matter which had been dealt with by it"; the inclusion of farm labourers where five or more are employed; that where an injury results in death or serious disablement, the workman or dependants will not be deprived of compensation because of willful misconduct or intoxication; provision to be made to include all sprain and strain cases; restoration of the old section providing for the appointment of the board; restoration to the "exclusive jurisdiction" of the Board

the question, whether an injury has arisen out of or in the course of the employment; requesting provision for a committee of review of three doctors to consider problem cases; that the basis of compensation be increased from 55 to 66½ per cent; that it should not be necessary for an injured workman to submit to examination by an employer's doctor; that the old section providing for notice of the accident by the injured workman be restored; that employees be included in any scheme of "accident prevention."

All these amendments were referred to a special committee, which recommended to the convention that in view of present economic conditions it would not be advisable to urge the entire number. Accordingly it was decided to concentrate on one resolution, i.e. that urging the amendment of section 2 (c) which defines "average earnings and earning capacity." In this respect the convention pressed for the re-establishment of the original clause in the Act prior to its amendment last year. The original clause reads as follows:—

"Average earnings' and 'earning capacity' when used in reference to the time of, or before the injury, shall be calculated on the daily, weekly, monthly or other remuneration which the workman was receiving at the time of the injury or received previously as may appear to the board best to represent the actual loss of earnings suffered by the workman by reason of the injury, but in any case not to exceed the sum of \$1,500 per year."

*Other Resolutions.*—Action on various matters was urged by the following resolutions:

Legislation providing for the six-hour day and the five-day week with no reduction in weekly wages.

Additional representation in the Legislature for the city of Moncton.

Amendment of the Schools Act, fixing the minimum school-leaving age at not less than 16 years.

Compulsory employment of not less than two licensed operators for each shift in all motion picture theatres.

Proclamation of the Acts to provide for old age pensions, mothers' allowances and minimum wages for women and girls.

Sponsoring the establishment of a New Brunswick Branch of the Co-operative Commonwealth Federation.

National control of the banking system.

Retention of the franchise by those receiving direct relief.

Endorsation by the province of a national system of contributory unemployment insurance.

Adoption of a modern Mining Act.

Proclamation of the Electrical Energy Act and creation of a proper inspection department.

Opposition to the passage of any bill purporting to grant a franchise to property owners only who are not more than two years in arrears for taxes.

Legislation bringing all cities, towns and municipalities into line, making imprisonment for debt impossible without first having the debtor appear before a judge or examiner appointed by the Provincial Government.

Prohibition of foreclosure of mortgages on farms and dwelling houses.

Opposition to the St. Lawrence waterway project.

Withholding of franchises from all trucks and buses where such traffic parallels a railway.

Licensing of all trucks and busses at point of entry to the province and display of New Brunswick licence plates.

More reasonable regulation and taxation of motor busses and trucks; bringing such under the jurisdiction of the Railway Commissioners and confining hours of drivers to those required to drive 100 miles a day.

Continuation of railway operation under government control and opposition to amalgamation in any form.

Full right of the unemployed to cast their vote in any election where they would have a vote if employed.

The election of officers resulted as follows: President, Jas. A. Whitebone; 1st Vice-President, A. W. Jamieson; 2nd Vice-President, J. B. Johnston; 3rd Vice-President, J. H. Wallace; Secretary-Treasurer, Geo. R. Melvin; Legislative Representative, Jas. A. Whitebone.

## Representations to Provincial Government

The New Brunswick Federation of Labour shortly after its annual convention in Fredericton presented its program of legislative requests to the prime minister and members of the provincial government.

The Legislature was asked to give consideration to the matter of supplying municipalities with power from the generating stations of the provincial Hydro Commission, thus securing for the citizens the benefits intended when the government system was inaugurated. It was stated that "at present where there is distribution by private interests the citizens are not securing those benefits."

With respect to the Factories Act, it was urged that several amendments, which had been submitted in previous years, be considered in connection with a thorough study of the Act, "with a view to bringing it up to a standard comparable with similar acts in the Dominion."

The memorandum stated that the present system of boiler regulation in the province was far from being adequate, and recommended the appointment of a properly qualified inspector, whose duty would be to see that no boilers are operated in the province until they have been properly inspected at least yearly.

It was declared that "the time is long past when a Department of Labour should have been established in the province," attention being drawn to the fact that "every other province in the Dominion has found this necessary for the well-being of their industries and the workers employed in them."

The enactment of legislation providing for a Fair Wage Act was urged, and also the putting into effect of Old Age Pensions, Mothers' Allowances and Minimum Wage Acts.

## Legislation desired by Alberta Federation of Labour

The Alberta Federation of Labour recently presented to the Hon. J. E. Brownlee, Premier of Alberta, and other members of the Alberta government, a memorandum of requests for legislation. Following closely upon the annual convention of the Federation early in the year, the memorandum incorporated many of the resolutions then adopted (LABOUR GAZETTE, February, 1933, page 186).

In regard to unemployment it was requested that "all relief work should be performed at rates of wages sufficient to guarantee the recipient and dependants an adequate standard of living which shall include sufficient clothing, shoes, rent, and water, and that where workers on relief must be transported to and from work, such transportation shall be made in

conveyances that will afford full protection against climatic conditions; also that all government holidays shall be recognized on all relief works."

Protection for unemployed workers' homes was sought through a limited moratorium or through the "Debt Adjustment Act."

Several amendments to the Workmen's Compensation Act were asked for. These were mainly along the lines advocated in the convention resolutions, urging 100 per cent compensation; increasing of widows' pension from thirty-five to forty dollars per month; abolition of three-day waiting period, etc.

With reference to health matters, the memorandum requested legislation providing for health insurance, and the appointment of a

qualified expert to pass on plumbing installations, and sanitary arrangements.

Requested amendments to the Mines Act were similar to those urged in resolutions adopted at the recent convention.

As regards hours of labour, the memorandum advocated a six-hour day and five-day week as a means of bringing about a better distribution of employment. The Legislature was urged to set an example to other employers by enforcing such conditions in all gov-

ernment contracts let for highway and maintenance work, with a fair wage provision similar to that contained in Dominion government contracts.

The Federation urged the introduction of legislation "which would regulate the wages, hours and working conditions of those in the employ of the motor traffic industry, in conformity with the working conditions prevailing in the railroad industry in order to offset unfair competition."

## "THE ORDER OF RAILROAD TELEGRAPHERS"

A STUDY of a "restricted sector of industrial relations" is presented by Dr. A. M. McIsaac, assistant professor of Economics at Princeton University, in a new volume entitled: "The Order of Railroad Telegraphers: a Study in Trade Unionism and Collective Bargaining" (Princeton University Press, 1933). The experience of this union is found by the writer to throw light on the problems involved in unionization of "semi-white collar workers," the difficulties of such organization being intensified by the wide distribution of members and the great diversification of the work. "This," he declares, "is a combination of circumstances which might seem to offer insuperable obstacles to effective union organization. The ability of the Telegraphers, beginning with the conventional forms and units of organization and action, to build up a closely integrated union, is an achievement of a high order."

In the introduction, Dr. McIsaac describes the numerous types of work of the railroad telegrapher, including train order work connected with the movement of trains, and the conveying of messages between offices of the railway, in addition to commercial traffic. He outlines the changes in methods of operation that have effected telegraphers as widely as other railwaymen—the adoption of the telephone, new methods of controlling train movements such as block signalling, the interlocked switch and signal installations in terminal areas, remote control, etc.

The work is divided into three parts, Part I dealing with the history of the union, including that of earlier organization back to 1863. From 1886-91 the order existed as a fraternal organization, it expanded as a protective union during the period from 1891-94, the next six years being a time of stabilization, while the next stages were those of union expansion between 1901-17, the period of federal control, 1918-20, and finally the period of national negotiations and agreements since the world

war. Dr. McIsaac refers as follows to the Canadian situation after the war:—

"The post war readjustment in Canada was achieved with much less friction and ill-feeling than in the United States. By mutual agreement Canadian Railway Board of Adjustment No. 1 was retained and proved a valuable agency for the adjustment of minor grievances. Wage readjustments were made in close conformity with those effected in the United States, but changes in working rules were much less drastic."

In 1929 the membership of the order was about 63,000, but a survey completed by the organization in June, 1932, indicated that the level of employment was then approximately 20 per cent below the 1929 level. The Telegraphers have taken an active part in pushing the program of the Association of Railway Labour Executives, looking to federal legislation in behalf of the shorter working week and other measures to deal with unemployment on the railroads.

Part II outlines union organization and methods, describing the structure of the union finance, methods of collective bargaining, experience with mediation, arbitration and compulsory investigation, and union recognition. Referring to the conciliation and adjustment machinery in Canada, the writer describes the provisions of the Railway Labour Disputes Act of 1903 and the Industrial Disputes Investigation Act of 1907;

"The attitude of the Telegraphers toward the Canadian law, which includes provisions for compulsory investigation, is in sharp contrast to its hostility to the investigatory machinery set up (in the United States) by the Transportation Act of 1920. Under the Canadian law, however, mediation played an important part, while the Transportation Act made no provision for it. Furthermore, the selection of a separate board of investigation for each dispute likewise gave protection against partiality or prejudice and prevented

the building up of a cumulative burden of suspicion or distrust such as attached to the Labour Board. This was more than sufficient to out-weigh the inevitable delays incident to organization, the lack of technical experience on the part of neutral members, and the difficulty of securing interpretations of awards once drafted. The limitations placed on strikes and boycotts which had been the principal cause of opposition in the first place, did not prove to be serious impediments to effective union action.

"Undoubtedly," the writer continues, "the creation of Canadian Railway Board of Adjustment No. 1, by agreement between the Canadian Railway War Board and the leading railway organizations materially reduced the strain on the existing machinery for the adjustment of disputes by providing a regular channel for the handling of secondary issues. On April 21, 1921, the life of this adjustment board was extended indefinitely by agreement between the Canadian Railway Association and the six participating unions. By June, 1930, the Board had handled nearly 360 cases, of which possibly 20 per cent involved the Telegraphers. Its existence enabled the Canadian committees to adjust a majority of their secondary disputes without reference to the national organization and largely eliminated the necessity for conciliation and investigation save in primary negotiations. This has unquestionably reduced the need for a permanent staff of mediators in Canada."

Part III describes union policies relating to conditions of employment under the following headings: The Wage Schedule, Hours of Service and Relief Periods; Labour Supply and Technological Change; Hiring, Seniority, and Discharge.

The last chapter summarizes the writer's conclusions from his study of the history of the organization:—"The experience of the Telegraphers," he says, "indicates clearly that while fraternal feeling, class solidarity, and desire to promote the general interests of labour may be forces for union organization, substantial continuing unionization on craft lines rests most securely on a record of achievement which seems acceptable to the men themselves when balanced against the possible dangers and the far from negligible present costs—in terms of money—of trade union membership. It seems fair to assume that the well-nigh universal recognition won by the Order in the past forty years has contributed substantially on the psychological side to the continued loyalty of the members, carrying as it does the implication of group participation in the control of their branch of the railroad in-

dustry. In the more directly economic field of wages and working conditions it does not seem possible to ascribe the totality of improvements to the pressure of union activity. Rather they reflect much more deep-seated trends in industry at large, but at the same time we may well suppose that had the union been absent the advances might have lagged far behind the general crest. It is certain that there would have been far less of standardization, either of wage rates or of basic working conditions, than has been achieved. Other advantages which have long inhered in the union organization are the definite means set up for handling the grievances and claims of individual employees, and the measure of protection which group action may afford in safeguarding the individual against arbitrary treatment. The respect in which the union influence is perhaps most clearly evident is in the almost universal application of the seniority principle in promotions and reductions of force as a protection against favoritism and arbitrary treatment. Possibly the strongest force for union loyalty is the part which the union has played in assuring the security of the worker."

"Managements," Dr. McIsaac continues, "have been willing to recognize and deal with the Telegraphers, not because of economic coercion, but because the union has offered a fairly satisfactory agency for dealing collectively with their employees, and because its policies have not been so restrictive as to place a premium on the substitution of some other method of dealing. It is probably fair to say that the public service character of the industry, and the inclusion of the Telegraphers from the beginning within the scope of the federal laws relative to mediation and arbitration, has extended to them a measure of protection not enjoyed in outside industries where there has never been any presumption in favour of collective dealing in the adjustment of wages and working conditions."

The Hon. J. E. Perrault, Minister of Roads of the province of Quebec, issued instructions to department engineers early in March that when spring operations begin on provincial roads, labourers are to be employed for eight hours a day instead of ten hours as in the past. It was considered that the system of shorter working hours would provide employment for a considerably larger number of workmen than in former years. Hitherto labourers started work at 7 a.m. and worked until 6 p.m., with an hour off for dinner. Under the new plan work will start at 8 o'clock and end at 5 p.m.

## INVERNESS COAL CO-OPERATIVE COMPANY LIMITED

**F**URTHER particulars in regard to the Inverness Coal Co-operative Company, Limited, are given in the *Canadian Co-operator*, March, 1933. The organization of this co-operative mining enterprise was noted in the *LABOUR GAZETTE*, September, 1932, page 947. "The Town of Inverness," the *Co-operator* states, "which has a population of about three thousand, depends for its existence upon its coal mining industry. It was formerly operated by the Inverness Railway and Coal Co. Rather more than seven years ago its undertaking was disposed of by the sheriff to a trust company, and in August last it passed to the Crown, otherwise to the province of Nova Scotia, through its Minister of Public Works and Mines.

"At this point the people who were really most interested in the undertaking, the workers and townsmen who lived and worked in the community, took a hand. They organized and incorporated the Inverness Coal Co-operative Company, Ltd. As a result of their initiative and enterprise they secured from the province and took over under an agreement with the Minister of Public Works and Mines, as from August 31, 1932, the undertaking formerly operated by the Inverness Railway and Coal Company. Under the agreement there is no provision for a purchase price, but the Co-operative Company agrees to pay all rentals for leases and all royalties due to the province on coal mined by it. If the Co-operative Company should fail actively to operate the mines for sixty consecutive days, the undertaking reverts to the government. Should, however, the company actively operate the mines as producing collieries for a period of three years, the undertaking is to become the property of the company, and the province is to give it a quit-claim deed 'of all the interests of His Majesty the King in and to the land and personal property formerly belonging to the Inverness Railway and Coal Company.'

"It is provided in the Memorandum of Association under which the Inverness Coal Co-operative Co., Ltd., is incorporated '(a) that no person may become a shareholder except a ratepayer of the town of Inverness, Nova Scotia, assessed to an amount over \$300, while continuing to be so assessed; or (b) workers who have worked in the mines operated by the company, or employees of the company, who have so worked or been so employed, as the case may be, continuously for thirty work-

ing days after the incorporation of the company while continuing to be such workers or employees as the case may be.' A shareholder becomes disqualified as such, and his share forfeited, by the failure to hold the required assessment within the town, or ceasing to be an employee of the company or a worker at the mines for a period of six months, or upon death. No share can be transferred without the consent of the directors.

"The authorized capital is \$100,000 in one thousand shares of \$100 each. No person is entitled to hold more than one share, so that the financial investment of no one can be sufficiently great to create a profit-seeking interest. As no one can have more than one share it follows that no shareholder can have more than one vote. As no provision is made in the Memorandum of Association as to the distribution of surplus revenues it is apparently contemplated that the same shall be applied to improvements, or to absorption in wage scales.

"Control is vested in a Board of Directors of five reputable citizens. The parish priest, Rev. R. L. MacDonald, is president, and ex-mayor J. Blair Henderson is secretary; the other members of the board being Alexander L. MacIsaac, John L. Fraser and John Y. MacNeil, who are rendering a useful, and probably an essential, community service without any thought of receiving compensation for it.

"In the last four months of 1932, that is to say from the commencement of the co-operative undertaking, while the daily working force has been 7 per cent less than for the same period of the previous year, the average daily output of coal has increased 18 per cent; the standard of wages prevailing throughout Nova Scotia as recommended by the Duncan Commission has been maintained; and \$140,000 has been paid in wages during the period mentioned.

"One interesting feature as indicating the co-operative interest of the workers in the undertaking is the fact that the men contribute \$1 per week from their wages to defray the cost of a new compressor. The Co-operative Company has purchased a considerable quantity of new and necessary equipment since it commenced operations. We understand that a spirit of unity and co-operation prevails among the people, and that they are working together with common aims, common purposes and common sympathies like one large family."

## WORKMEN'S COMPENSATION IN NEW BRUNSWICK IN 1932

THE fourteenth annual report of the New Brunswick Workmen's Compensation Board deals with the administration of the Act during the calendar year 1932. In compliance with the recommendations of the Royal Commission which recently examined into the working of the Act (LABOUR GAZETTE, November, 1932, page 1178) a reclassification of the industries under the Act was carried out during the year, resulting in a reduction of the number of classes from seven to five under the following headings: Mining, forest products, manufacture and sale, construction, transportation.

The provisional statement of income and expenditure for 1932 indicates an estimated income of \$389,978.81, while the expenditure is estimated at \$438,528.78, leaving an estimated deficit of \$48,549.97. However, the surplus of \$195,012.69 carried forward from 1931 leaves a net estimated surplus of \$146,462.72. It is explained that the estimated balances to the debit or credit of classes are based on provisional statements filed "and what the Board think, after going over the data in their possession, is a fair income to be expected from the amount to be collected owing to the expected increase of the actual payrolls over the provisional. The expenditure shows the same condition. To the amount paid out is added a sufficient sum which the Board estimates will cover the costs of claims in assembly and the claims which may be existing as of December 31, 1932, but not reported to the Board and also the estimated amount for claims reported, partly paid, but not completed."

The cost of administration in 1932 was increased by \$8,978.54. This was accounted for chiefly by two major items—the inclusion of the Factory Department under the Workmen's Compensation Board at a net cost to the Board of \$2,986.91; and the expenses of the Royal Commission of investigation which were charged to the Board and which amounted to \$5,991.63.

During the year, the Board found it necessary to write off as bad debts the sum of \$1,937.77, mainly on account of debtors having left the province or made assignments and received their discharge in bankruptcy.

While no completed figures were available at publication for accidents during 1932, a tabular analysis is made of the accidents in 1931, together with a comparison of accident frequencies and accident compensation cost of previous years.

In 1931, the compensation cost of accidents amounted to \$468,718.89 as compared with

\$548,527.54 in 1930 and \$628,547.58 in 1929. Comparison on a basis of accident frequency shows that there were 5,841 accidents in 1931; 7,204 in 1930; and 9,281 (the peak) in 1929. Of the 5,841 accidents occurring in 1931, 17 were fatal as compared with 30 and 36 fatalities in 1930 and 1929, respectively. In 1931, the accidents are classified as follows: Fatal, 17; permanent partial, 253; temporary total, 3,328; minor and medical aid only, 2,243.

The chief causes of accidents in 1931 were listed as follows: fall of person, 1,037; falling objects, 835; tools, 815; handling objects, 726.

The average age of workmen in accidents in 1931 was 33.27 years, and the average weekly wage of such workmen was \$19.53. In temporary total disability cases, the total and average time losses resulting from accidents were 98,716 days and 29.66 days, respectively. In permanent partial disability cases, total and average time losses were 21,432 days and 88.56 days, respectively.

*Factory Inspection.*—Included in the report of the Board is the annual report of the factory inspector. He states that since entering on his duties on May 1, 1932, he made 640 inspections in various industries under the Act. During the course of inspection it was found that there were in operation 252 uninsured boilers, and as recent legislation requires all boilers to be insured, the inspector took steps to ensure conformity with the regulations. As regards stationary engineers, there were issued 720 renewal licences, 76 new licences with 6 re-examinations. The inspector recommended the grading of stationary engineers according to the size of the boiler used.

The Union of New Brunswick Municipalities, at a special convention held at Fredericton early in March, adopted the following resolutions: (1) "That the Provincial Government be urged to enter into an arrangement with the Federal Government for the continuation of unemployment relief for the ensuing year without interruption during the summer months; (2) "That the Union of New Brunswick Municipalities ask the Provincial Government to request the Dominion Government to undertake necessary public works throughout the province of New Brunswick as a means of relieving unemployment; (3) "That the Provincial Government be requested to furnish special assistance to those sections of the province, that, on investigation, are found to be in extreme circumstances on account of the economic situation."

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Seventeenth Session of the International Labour Conference

**T**HE Seventeenth Session of the International Labour Conference will open at Geneva on June 8. The agenda of the meeting was outlined in the February issue, page 189. The subjects to be considered are as follows:—

1. Abolition of fee-charging employment agencies.
2. Invalidity, old age and widows' and orphans' insurance.
3. Methods of providing rest and alternation of shifts in automatic sheet glass works.
4. Employment insurance and various forms of relief for the unemployed.
5. Reduction of hours of work.

The subjects of items No. 1 and 2 were discussed for the first time at the session last year (LABOUR GAZETTE, May, 1932, page 555, etc.) and will therefore come up for final discussion this year. Items No. 3 and 4 will come before the Conference for the first time. In connection with Item No. 5, the Conference will have before it the report of the "Tripartite Preparatory Conference" which was reprinted in the LABOUR GAZETTE, February, 1933, pages 192-201 (correction at end of March issue).

### Action by Various Countries on International Conventions

*Industrial and Labour Information*, the weekly publication of the I.L.O., contains in its issue of April 3 the following notes on recent progress in connection with international conventions.

On February 17, the Turkish Legation at Berne notified the Swiss Federal Council of the adherence of Turkey to the Convention of September 26, 1906, prohibiting the use of white (yellow) phosphorus in the match industry.

On March 18 the Italian Cabinet approved a Bill for the ratification of the Convention concerning forced or compulsory labour, adopted by the International Labour Conference at its Fourteenth Session (1930).

On March 16, the Polish Chamber adopted a resolution of its Labour Protection Committee inviting the Government to submit to the Chamber for ratification the Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week, adopted by the International Labour Conference at its First Session (Washington, 1919).

By letter of March 15 the British Minister of Labour informed the International Labour Office that the revision of the Docks Regulations with a view to enabling the Draft Convention concerning the protection against accidents of workers employed in loading or unloading ships (revised 1932) to be ratified was under consideration.

By letter of February 27, the Canadian Minister of Labour informed the International Labour Office that the Convention limiting hours of work in coal mines was formally submitted to the Dominion Parliament on February 6, 1933.

### Abolition of Fee-charging Employment Agencies

In preparation for the Seventeenth Session of the International Labour Conference, the International Labour Office has issued a "Blue Report" relating to the first item on the agenda—"Abolition of fee-charging employment agencies." This question passed through the first stage of the double-discussion procedure at the last session of the Conference, when a number of points were defined on which governments should be consulted by questionnaire with a view to the consideration of definite proposals at the next session. The report now published contains the replies of the governments, a review of the problem in the light of these replies, and drafts of a Convention and a recommendation intended to serve as a basis for discussion and decision. Replies were received in time for inclusion in the report from 33 countries. While a few governments are opposed to or dubious about the abolition of commercial fee-charging employment agencies, the great majority of governments are in favour of the adoption of a Convention for the abolition of such agencies. The Office has accordingly drafted a Convention providing for the abolition, after a transitional period of three years, of employment agencies which charge fees and are carried on with a view to profit, exceptions being permitted under certain conditions for agencies which cater for special categories of workers. Provision is made for the licensing and supervision of agencies conducted by philanthropic or other associations which charge fees but are not operated for benefit. During the transitional period, no new fee-charging employment agency would be allowed to be established, and the existing agencies would be subject to public supervision and regulation as to fees charged.

The proposed Draft Convention is supplemented by a recommendation embodying suggested rules and methods for applying the Convention.

### Hours of Work in Coal Mines

Delegates of the Governments of Belgium, Czechoslovakia, France, Germany, Great Britain, the Netherlands and Poland met on February 20 at Geneva to discuss the possibility of simultaneous ratification and application, at the earliest possible moment, of the Convention limiting hours of work in coal mines. They took note of the difficulties which would be encountered by Great Britain in applying the Convention, particularly in connection with the relief of men engaged on certain kinds of continuous work and with week-end work, and concluded that, in view of these difficulties, on which they were not in a position to pronounce an opinion, simultaneous ratification did not appear possible at the moment.

### Eight-hour Day Legislation in Italy

A debate took place in the Italian Chamber of Deputies on February 16 on a Bill relating to hours of work in industrial undertakings, which, if it becomes law, will make possible the unconditional ratification by Italy of the Convention limiting hours of work in industrial undertakings to eight in the day and forty-eight in the week, which was adopted by the International Labour Conference at its First Session in Washington, 1919. The Convention had already been ratified by Italy, subject to similar action by certain other countries. The object of the present Bill, which has been approved by the Senate and introduced in the Chamber of Deputies by Mr. Mussolini, is to enable her to withdraw the reservation relating to ratification by other countries.

In the course of the debate Mr. Olivetti assured the Chamber that employers were fully aware of the value and political importance of the Bill. Its essential object was to permit unconditional ratification of the Washington Convention, which, unanimously approved after the war, had seemed destined to be immediately enforced as a mark of international solidarity; yet twelve years had passed and the Convention had obtained but few ratifications, nor did the number include those of the principal industrial countries. Competition from Japan and other Asiatic states was not a factor to be lightly passed over. This competition was now spreading to Mediterranean markets and could not be re-

garded as a transitory phenomenon; it was making itself felt in Egypt, particularly in the textile trade, and Japanese steel was challenging that of Belgium on the Antwerp market itself. This feature of international commerce could not be considered without uneasiness. Italy had applied the eight-hour day since 1923, however, and the present Bill was only a confirmation of this policy.

After a short discussion the various clauses of the Bill were approved.

### Ratifications of Conventions of the International Labour Conference

The International Labour Office, in the issue of March 20 of its weekly publication *Industrial and Labour Information*, states that a fresh landmark has been reached in the progress of ratifications of Conventions adopted by the International Labour Conference, the total number of ratifications registered now being 502. It may be of interest to recall that the 400 mark was reached in July 1930, and the 300 mark about two years before. Twelve months ago, the number of ratifications registered stood at 458. The new ratifications during this period have therefore numbered 44, as compared with 34 in the corresponding period 1931-1932, 38 in 1930-1931, and 44 in 1929-1930. These figures show that, though the growth of ratifications is slow, it is proceeding with great regularity in spite of adverse economic conditions.

Of the 58 States Members of the International Labour Organization, 38 have ratified at least one Convention. Of these, 27 are European States and account for 424 ratifications, while the remaining 78 ratifications are from 11 non-European countries; 25 States have ratified at least 12 of the 33 Conventions so far adopted, and 6 States have ratified 20 or more (Spain, 30; Luxemburg and Bulgaria, 27 each; Belgium and the Irish Free State, 21; Yugoslavia, 20).

Of the 33 Conventions, 23 have been ratified by 12 or more States, and 11 have been ratified by at least 20 States. The average number of ratifications per Convention is 15. The Conventions which have obtained the largest numbers of ratifications are: the 1925 Convention concerning equality of treatment as regards compensation for accidents (28 ratifications); the 1919 Convention relating to night work of young persons in industry (26); the 1919 Conventions concerning unemployment and night work of women, and the 1921 Convention relating to the minimum age for trimmers and stokers (25 each).

## Survey of the Work and Relations of the "I.L.O."

The March issue of the *Annals of the American Academy of Political and Social Science* consists of a symposium, which the editors hope "will answer the questions which the times are causing people to ask concerning the International Labour Organization, the least known of those now all but inclusive international institutions which were created by the Treaty of Versailles." The contributors to the symposium are persons who either have taken active part in the work of the Organization, or have studied its activities from sympathetic interest. The contents of the issue are indicated by the following list of the subjects treated. Mr. H. B. Butler, Director of the International Labour Office at Geneva, contributes a general introduction in which he describes the organization as a machine specially adapted for dealing, on a world-wide scale, with the social effects of the world-wide depression. "Because trade and commerce are international," he points out, "any change in the rhythm of industry must be made simultaneously in all the great manufacturing countries if the equilibrium of their competitive power is to be undisturbed. The International Labour Organization provides the machinery by which such international changes can be brought about. . . . . It is only through co-operative planning and action that disasters like the great depression can be avoided in the future. That is the most inescapable lesson of the crisis; and it is for that reason that the international economic machinery established at Geneva, of which the International Labour Organization forms an increasingly important part, must grow, rather than diminish in importance if the recurrence of economic catastrophes is to be prevented."

Five main topics are dealt with by the contributors to the symposium, as follows:—

*The International Labour Organization: its Origin and Nature.*—The contributors to this section include: Mr. E. J. Phelan, chief of the Diplomatic Division of the I.L.O., who describes: "How the International Labour Organization operates"; Professor Ernest Mahaim, former chairman of the Governing Body, on "The principles of international labour legislation"; and Professor James T. Shotwell, of Columbia University, on "The I.L.O. as an alternative to violent revolution."

*International Relations in the Organization.*—This section includes papers by Felix Morley, of the Brookings Institution at Wash-

ington, on "International economic organization"; Professor J. P. Chamberlain, of Columbia University; on "Legislation in a changing economic world"; and Jean Morelet, legal adviser of the International Labour Office, on "Legal competence of the I.L.O."

*"Some contributions to Current Economic Problems."*—This section includes: Dr. Bryce M. Stewart, director of research for Industrial Relations Counselors, Inc., and former director of the Employment Service of Canada, on "The I.L.O. and unemployment"; Dr. Hugo Haan, of the International Labour Office, on "Scientific management and economic planning"; G. A. Johnston, of the Intelligence and Liaison Division of the Office at Geneva, on "The International Labour Office and industrial relations"; and Professor J. P. Chamberlain, on "Forced labour."

*"The Organization in Action."*—This section includes:—Professor Amy Hewes, of Mount Holyoke College, on "The Conference at work"; Professor Francis G. Wilson, University of Washington, Seattle, on "The enforcement of international labour standards"; Dr. Royal Meeker, Secretary of Labour and Industry for Pennsylvania, on "An international civil service"; Leifur Magnusson, director of the Washington Branch of the I.L.O., on "The dual nature of research activities"; Dr. Alice S. Cheyney, of the Washington Branch of the I.L.O., on "The character and accessibility of office research materials"; Professor S. M. Lindsay, of Columbia University, on "The service of the International Labour Office to legislative projects"; and Professor Pipkin, of Louisiana State University, on "Relations with the League of Nations."

*"The I.L.O. and the United States."*—This section is as follows:—Mr. James Myers, of the Social Service Department of the Federal Council of the Churches of Christ in America, on "American relations with the International Labour Office"; Mr. T. G. Spates, of Industrial Relations Counselors, Inc., on "Employers of the United States and the I.L.O."; Mr. Spencer Miller, Jr., secretary of the Workers' Education Bureau of America, on "Labour's relation to the I.L.O."; Dr. Hugh S. Hanna, of the U.S. Bureau of Labour Statistics, on "The international cost of living inquiry"; Professor J. H. Willits, of the University of Pennsylvania, on "Collaboration with the I.L.O."; and Dr. Alice S. Cheyney, on "Convention provisions and labour legislation in the United States."

## THE RELIEF ACT, 1933

**A**N ACT respecting Relief Measures, to be cited as The Relief Act, 1933, was passed by the Parliament of Canada in March, being assented to on March 30. The last issue of the LABOUR GAZETTE, on page 290, reproduced the speech delivered in the House of Commons on February 24, by the Hon. W. A. Gordon, Minister of Labour, in moving a proposed resolution declaring "that it is expedient to introduce a measure to continue in force the provisions of The Relief Act, 1932, until the 31st of March, 1934." The Act of last year was given in the LABOUR GAZETTE, May, 1932, page 505. The new Act makes various amendments in the earlier legislation, the changes being indicated below by italics in the text of the Act. These changes are as follows:—

In the preamble, the italicized words "and elsewhere" are inserted in place of the words "and in the drought-stricken areas of the Province of Saskatchewan."

Section 2 is re-drafted, and the italicized words in paragraphs (a) and (b) of the section are inserted. The section formerly read as follows:—

"The Governor in Council may, on such terms and conditions as may be agreed upon, and notwithstanding the provisions of any statute or law,—(a) enter into agreements with any of the Provinces respecting relief measures therein; (b) grant financial assistance to any Province by way of loan, advance, guarantee or otherwise; (c) take all such measures as in his discretion may be deemed necessary or advisable to protect the credit and financial position of the Dominion or any Province thereof; (d) loan or advance money to, or guarantee the payment of money by any public body, corporation or undertaking."

In Section 3 the only change is the insertion of the italicized words "and elsewhere" in paragraph (a) in place of the words: "and for the continuance during such period as may be necessary and advisable, of the relief measures heretofore undertaken and now being carried on at the cost of Canada in the drought-stricken areas of Saskatchewan by the Saskatchewan Relief Commission."

Section 4 is amended by the addition of the words shown in italics.

No change is made in Sections 5, 6, 7 or 8.

In Section 9 the year 1934 is substituted for the year 1933, by which change the operation of the Act is continued for one year.

The text of the new Act is as follows:—

## AN ACT RESPECTING RELIEF MEASURES

Whereas by reason of the prolonged world wide economic depression, recovery to a more normal economic condition has been retarded in the Dominion of Canada; and whereas the Provinces may require assistance in carrying out necessary relief measures and to meet financial conditions as the same may arise; and whereas in such event it is in the national interest that Parliament should support and sup-

plement the relief measures of the Provinces and grant them financial assistance in such manner and to such extent as the Governor in Council may deem expedient; and whereas it is necessary to make special provisions to deal with the situation in the National Parks of Canada and elsewhere; and whereas for these and similar purposes the powers necessary to insure the speedy and unhampered prosecution of such relief measures and the maintenance of the credit of the Dominion and the Provinces thereof should be vested in the Governor in Council: Now, therefore, His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. This Act may be cited as *The Relief Act, 1933.*

2. Notwithstanding the provisions of any statute or law the Governor in Council may,—

(a) Upon such terms and conditions as may be agreed upon,—enter into agreements with any of the provinces respecting relief measures therein; grant financial assistance to any province by way of loan, advance, guarantee or otherwise; loan or advance money to or guarantee the payment of money by any public body, corporation or undertaking; and in respect of such loans, advances and guarantees, *may accept such security, enter into such agreements and generally do all such things as the Governor in Council may deem necessary and expedient in the public interest.*

(b) *When Parliament is not in session, to take all such measures as in his discretion may be deemed necessary or advisable to maintain, within the competence of Parliament, peace, order and good government throughout Canada; and at all times to take all such measures as in his discretion may be deemed necessary or advisable to protect and maintain the credit and financial position of the Dominion or any Province thereof.*

3. Without restricting the generality of the terms of the next preceding section hereof and notwithstanding the provisions of any statute or law, the Governor in Council may

(a) Provide for special relief, works and undertakings in the National Parks of Canada *and elsewhere;*

(b) Assist in defraying the cost of the sale and distribution of the products of field, farm, forest, sea, river and mine;

(c) Take all such other measures as may be deemed necessary or advisable for carrying out the provisions of this Act.

4. The Governor in Council may pay out of the Consolidated Revenue Fund such moneys as may be necessary for all or any of the purposes of this Act, *but the amount paid for direct relief for the fiscal year ending the 31st day of March, 1934, shall not exceed the sum of twenty million dollars.*

5. The Governor in Council shall have full power to make all such orders and regulations as may be deemed necessary or desirable to carry out the purposes and intention of this Act.

6. All orders and regulations of the Governor in Council made hereunder shall have the force of law and may be varied, extended or revoked by any subsequent order or regulation; but if

any order or regulation is varied, extended or revoked; neither the previous operation thereof nor anything duly done thereunder shall be affected thereby, nor shall any right, privilege, obligation or liability acquired, accrued, accruing or incurred thereunder be affected by any such variation, extension or revocation.

7. All orders in council and regulations made under the provisions of this Act shall be laid before the House of Commons forthwith after the making thereof if Parliament is then sitting, or if not, said orders in council or regulations or an abstract thereof disclosing their essential provisions shall be published in the next following issue of the *Canada Gazette*.

8. A report shall be laid before Parliament within fifteen days after the expiration of this Act, or if Parliament is not then in session, shall be published and made available for distribution by the Department of Labour, containing a full and correct statement of the moneys expended, guarantees given and obligations contracted under this Act.

9. This Act shall expire on the thirty-first day of March, 1934, and any obligation or liability incurred or created under the authority of this Act prior to the thirty-first day of March, 1934, may be paid and discharged out of the Consolidated Revenue Fund notwithstanding the expiration of this Act on the said date.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN FEBRUARY, 1933

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on March 1 was 7,959, the employees on their payrolls numbering 708,644 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for February was 1,762, having an aggregate mem-

bership of 150,168 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 60 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) Employment Situation at the Beginning of March, 1933, as reported by Employers

There was a slight falling off in employment at the beginning of March, but this involved a very much smaller number of workers than were laid off on March 1, 1932, and the reduction was also less than that reported in the late winter of 1931. Statements were furnished to the Dominion Bureau of Statistics by 7,959 of the larger employers of labour throughout Canada, whose payrolls aggregated 707,356 persons on March 1, 1933, as compared with 708,644 persons employed by the firms in the preceding month. The index number (based upon the average for 1926 as 100) stood at 76.9 on March 1, 1933. At the beginning of March in the preceding twelve years, the index was as follows: 1932, 88.7; 1931, 100.2; 1930, 110.2; 1929, 111.4; 1928, 102.6; 1927, 97.5; 1926, 92.6; 1925, 88.1; 1924, 91.8; 1923, 91.0; 1922, 82.9, and 1921, 89.1.

Improvement was indicated in manufacturing, notably of textile, rubber and iron and steel products, and mining and construction also showed an increase in employment, but seasonal curtailment was shown in logging and transportation; trade, services and communications also reported somewhat reduced activity.

#### Employment by Economic Areas

The trend of employment was downward in Quebec and the Prairie Provinces and British Columbia, but was favourable in the Maritimes and Ontario.

*Maritime Provinces.*—There was a slight improvement in employment in the Maritime Provinces, where 560 employers increased their staffs from 53,239 persons on February 1

to 53,423 at the beginning of March. Gains were registered in mining, railway construction and manufacturing, chiefly of lumber and pulp and paper products, while logging, transportation and trade were slacker, and there were large losses in highway construction. Employment on March 1, 1932, showed a decline, but the index then was higher than on the date under review.

*Quebec.*—Contrary to March 1, 1932, employment showed a decrease in Quebec on the date under review. Logging was seasonally less active and trade and transportation also

communications group, were more active than on February 1; highway construction also showed a decided increase, though reductions were indicated in food, lumber and some other factories, and in trade, mining, services, logging, building, and railway construction.

*Prairie Provinces.*—As is customary in the late winter, there was a slight contraction in the Prairie Provinces on March 1; this involved a much smaller number of workers than that recorded on the same date in 1932, when the index number was higher than on the date under review. Statistics were tabu-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

afforded less employment. On the other hand, manufacturing reported improvement, especially in textile, tobacco and liquor, iron and steel and rubber groups, and increased employment was also indicated in mining. Statements were tabulated from 1,934 firms, whose payrolls aggregated 200,086 employees, as against 204,482 at the beginning of February.

*Ontario.*—Increased activity was registered in Ontario, where the 3,512 co-operating establishments added 3,477 persons to their forces, bringing them to 299,457 on March 1. Iron and steel and textile reported considerable recovery, and leather, pulp and paper, rubber, clay, glass and stone, and non-ferrous metal factories, together with the transportation and

lated from 1,174 firms with 99,084 employees, compared with 99,540 in their last report. Manufacturing, textile, lumber and leather products registered a moderate increase, and logging and construction were also rather brisker, while coal mining, transportation and trade showed declines, those in the first named group being most extensive.

*British Columbia.*—Manufacturing, particularly of lumber and non-ferrous metal products, recorded a small gain, and logging and highway construction also afforded greater employment. On the other hand, transportation, trade and mining showed decreases. The working forces of the 779 co-operating employers aggregated 55,306 per-

sons, as compared with 55,403 in the preceding month. The index was lower than on March 1, 1932, when a slight increase had been recorded.

### Employment by Cities

Employment declined slightly in Montreal, Toronto, Ottawa, and Vancouver; on the other hand, the trend was slightly upward in Quebec City, Hamilton, Winnipeg, Windsor and the adjacent Border Cities.

*Montreal.*—Reductions in staffs were reported in Montreal, where the gain in manufacturing, chiefly in textiles, was offset by the large decreases in construction and trade. Statements

were tabulated from 1,111 firms employing 110,689 workers, as compared with 112,238 in the preceding month. The tendency on March 1, 1932, was upward, but the index then was higher.

*Quebec.*—Manufacturing afforded more employment, and construction and transportation were also rather brisker, while other industries, on the whole, recorded only small changes. The working forces of the 150 co-operating employers totalled 11,409 persons, compared with 11,055 on February 1, 1933. The index was lower than on the same date in 1932, when a smaller gain had been indicated.

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

|   | Canada | Maritime<br>Provinces | Quebec | Ontario | Prairie<br>Provinces | British<br>Columbia |

| Relative Weight of Employment by Economic<br>Areas as at March 1, 1933..... | 100.0  | 7.6                   | 28.3   | 42.3    | 14.0                 | 7.8                 |

\* Revised.

*Toronto.*—The textile, lumber, tobacco and liquor and iron and steel groups showed increased activity, but there was a considerable decrease in food, construction, trade and services, so that there was practically no general change in the city in the total number employed. Returns were received from 1,187 firms, employing 101,095 workers at the beginning of March. The index was higher on March 1, 1932, than on the date under review.

*Ottawa.*—Employment in Ottawa showed very little change. In construction, manufactures and transportation there were small declines, while trade was slightly improved. The

150 co-operating employers reported a total payroll of 10,805 on the date under review, compared with 10,828 on February 1. The index was lower than at the beginning of March, 1932, when a decrease had been noted.

*Hamilton.*—A slight gain was recorded in Hamilton on the whole, and in the manufacturing division there was a moderate improvement. An aggregate payroll of 22,183 persons was reported by the 234 firms whose returns were tabulated, and who employed 22,063 in their last report. A small gain had been recorded on the same date of last year, but the level of employment then was higher.

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

| Relative Weight of employment by Cities as at March 1, 1933.. | 15.7     | 1.6    | 14.3    | 1.5    | 3.1      | 1.3     | 4.6      | 3.5       |

*Windsor and the Adjacent Border Cities.*—An increase was indicated in the Border Cities, almost entirely in manufacturing, and especially in automobile factories. There was very little change in the other groups. Data were received from 136 employers with 9,026 workers, or 359 more than on February 1. Employment was slacker than at the beginning of March, 1932, when reductions had been recorded.

*Winnipeg.*—There was a small increase in Winnipeg, where 397 firms reported 32,652 employees, as against 32,586 in the preceding month. The improvement was largely in manufacturing, while transportation and communications were slacker. Employment was

in less volume than on March 1 of last year, when a reduction had been registered.

*Vancouver.*—Manufacturing, as a whole, recorded a small gain in Vancouver, but trade, construction and services showed curtailment, so that there was a reduction of 284 persons in the payrolls of the 346 co-operating firms, who had 24,927 employees. A greater decrease had been indicated on the same date of a year ago, when the index was higher.

Index numbers of employment by cities are given in Table II.

### Manufacturing Industries

The trend of employment in this group was upward, according to statistics furnished by

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

\* Revised.

4,910 manufacturers employing 375,911 operatives, as compared with 372,213 at the beginning of February. The most pronounced recovery took place in textile factories, but iron and steel also showed important seasonal gains, and increased activity was recorded in

leather, lumber, rubber, pulp and paper, non-ferrous metal and tobacco factories. On the other hand, food, electrical apparatus and non-metallic mineral products works were slacker. The general improvement in manufactures was not quite so great as on March 1, 1932, and

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

\* Revised.

was also exceeded by the advance reported on the same date in 1931.

*Animal Products, Edible.*—Employment in this industry remained practically the same as in the preceding month, while a decrease had been recorded on the same date last year. The index number stood at 88·3, as compared with 91·6 on March 1, 1932. The working forces of the 219 reporting establishments aggregated 16,050 persons, as compared with 16,053 on February 1.

*Leather and Products.*—There was considerable improvement in employment in this industry at the beginning of March, according to statistics from 253 manufacturers, whose staffs aggregated 17,031 persons, compared with 16,707 on February 1. Gains were reported in Quebec and Ontario. An increase had also been noted on the corresponding date a year ago, and the index number was then some five points higher than on the date under review.

*Lumber and Products.*—Improvement was indicated in sawmills, container, vehicle, and wood-turning and carving, while furniture factories and other wood-using industries reported curtailment. Statements were tabulated from 751 employers, whose staffs totalled 22,944 workers, compared with 22,814 in the preceding month. The tendency was favourable in the Maritime and Prairie Provinces and British Columbia, but small decreases were registered in Ontario and Quebec. The index number was lower than on March 1, 1932, when a small increase had also been reported.

*Plant Products, Edible.*—A decrease was recorded in the edible plant product group, chiefly in fruit and vegetable preserving and bread and bakery divisions. The firms making returns to the Dominion Bureau of Statistics, 391 in number, had 24,866 workers in their employ, or 659 less than at the beginning of February. Ontario showed most of the loss, but the trend was generally downward. Improvement had been recorded at the beginning of March last year, when the index number stood at 93·2, compared with 87·3 on the date under review.

*Pulp and Paper Products.*—Employment in this division showed an improvement on the date under review, chiefly in pulp and paper and paper products, while the printing and publishing divisions showed a falling off. A combined working force of 50,469 persons was reported by 557 co-operating manufacturers, who had 50,198 employees on February 1. The situation was not so favourable as in the early spring of 1932, when greater curtailment had been noted. The largest increase on the date under review took place in Ontario and the Maritime Provinces.

*Rubber Products.*—A decided improvement in employment was recorded in rubber factories, 43 of which employed 9,750 workers, as compared with 9,203 in their last report. The index number was lower than on March 1, 1932, when a much smaller increase had been indicated.

*Textile Products.*—Increases were registered in this group chiefly in garment, personal furnishings and headwear factories, although the level of employment was not so high as that reported on March 1, 1932. The payrolls of the 849 co-operating establishments aggregated 77,065 persons, as compared with 75,480 on February 1. All provinces registered an improvement except the Maritime Provinces, where a small decline was indicated.

*Tobacco, Distilled and Malt Liquors.*—Gains in employment were noted on March 1 in tobacco factories, while other divisions showed only slight changes. The index number in the tobacco and beverage group, standing at 117·4, was some three points lower than on the same date of a year ago. Data were received from 149 firms employing 15,142 workers, or 425 more than in their last report.

*Clay, Glass and Stone Products.*—There was very little change in building material plants, in which the situation was not so good as on the same date in 1932. Statements were compiled from 178 manufacturers with 5,224 employees, as against 5,232 in the preceding month.

*Electric Current.*—Employment in plants producing electric power showed a slight gain, according to the 93 co-operating firms who employed 13,163 workers, compared with 13,159 on February 1. There were declines in the Maritime Provinces and Quebec, with improvement in Ontario, the Prairie Provinces and British Columbia. The index number, at 106·7, was 9·3 points lower than on March 1, 1932, when a small gain had also been reported.

*Electrical Apparatus.*—The trend of employment was downward in electrical appliance factories, 88 of which reduced their payrolls by 184 persons to 9,244 on the date under review; Quebec registered most of the loss. Greater curtailment had been indicated at the beginning of March, 1932, but the index number was then several points higher.

*Iron and Steel Products.*—Continued advances were reported in the iron and steel industry, in which employment was, however, in smaller volume than in the early spring of 1932. Automobile and heating appliance factories registered the greatest increases, but there was also an upward movement in agri-

cultural implement, steel shipbuilding and repairing, foundry and machine shops. Returns were tabulated from 774 establishments having 77,678 persons in their employ, or 1,297 more than in the preceding month. The most noteworthy expansion was in Ontario, but general improvement was noted except in the Prairie Provinces.

*Non-Ferrous Metal Products.*—Smelting and refining plants showed heightened activity, while other non-ferrous metal plants reported little general change; 130 firms had 11,982 workers on their payrolls, as against 11,863 at the beginning of February. The additions to staffs were made in Ontario and British Columbia, while there were slight losses in Quebec, the Maritime and Prairie Provinces. The level of employment was lower than on March 1, 1932, when gains were also indicated.

*Mineral Products, n.e.s.*—Statistics tabulated from 113 employers showed a small decline in their forces of 11,428 workers. Practically no change had been recorded on the corresponding date a year ago, when the index number was some two points higher.

### Logging

Marked contractions were noted in logging camps, in many of which the season's operations were almost completed; 231 firms had 15,700 men in their employ, or 2,735 fewer than in their last report. The decline involved a rather larger number of workers than that recorded at the beginning of March a year ago, when the index was 3.5 points higher.

### Mining

*Coal.*—Employment in the mining of coal showed gains. A decided improvement was reported in the Maritime Provinces, although a seasonal falling off was indicated in the Western coal fields. Eighty-nine operators increased their labour forces from 23,031 persons on February 1 to 23,267 at the beginning of March, 1933. Losses were indicated on March 1, 1932, but the index number was then a few points higher.

*Metallic Ores.*—There was an upward trend in employment in this group on the date under review. Data were received from 69 mines employing 15,853 workers, as against 15,715 at the beginning of February. The index was fractionally higher than on March 1, 1932, when a small loss had been recorded.

*Non-Metallic Minerals (Other than Coal).*—A decline was registered in these industries, according to statistics from 71 employers having 3,623 persons on their payrolls, compared

with 3,789 in the preceding month. An increase had been noted on March 1 of a year ago, when the index was higher.

### Communications

Small reductions in personnel were indicated on telephones and telegraphs; returns were received from 82 companies and branches with 22,515 employees, compared with 22,547 in the preceding month. Greater curtailment had been registered on March 1, 1932, when the index was higher.

### Transportation

*Street Railways and Cartage.*—Statistics were tabulated from 177 employers in this division, whose staffs included 23,789 persons, as compared with 23,863 at the beginning of February. Larger reductions had been noted on the same date in 1932, when the volume of employment was slightly lower.

*Steam Railways.*—Continued but much smaller reductions were registered in steam railway operation, from which 712 workers were released by the 99 co-operating companies and divisional superintendents, on whose payrolls were 53,796 persons. A greater loss had been indicated on March 1 of last year, but the index number was then higher. Declines were noted on the date under review in all provinces except Ontario, where very little change was noted.

*Shipping and Stevedoring.*—There was a small decline in the shipping and stevedoring group, in which employment was slacker than on March 1, 1932; on the date under review, 88 employers reported a staff of 9,957 persons. Improvement around the Quebec and Ontario ports was offset by losses in the Maritime Provinces; very little change was shown in British Columbia.

### Construction and Maintenance

*Building.*—As on the same date last year, there was a falling-off in building activities at the beginning of March, in which all provinces shared. The 615 contractors furnishing data throughout the Dominion had 10,084 employees, as against 11,558 on February 1. The level of employment was considerably lower than in the early spring of 1932.

*Highway.*—Highway construction registered considerable improvement on March 1, 1933, when 308 employers reported 34,410 workers, as compared with 32,931 on February 1. Gains were indicated in Ontario, the Prairie Provinces and British Columbia, while there were contractions in Quebec and the Maritime Provinces. Employment in this group was

better than on March 1 in any other year on record, except 1931 and 1932; the curtailment of unemployment relief works accounted for the relatively low level of employment as compared with these years.

**Railways.**—Employment on steam railway construction and maintenance showed an increase, according to data received from 34 companies and divisional superintendents employing 20,705 persons, or 331 more than at the beginning of February. There were advances in all provinces except Ontario and British Columbia. A gain had also been noted at the beginning of March in 1932, when the index was higher.

### Services

Fewer employees were indicated in the service group, in which 309 establishments reported a staff of 20,110, as compared with 20,399 on February 1. Activity was less than

in the same month of 1932, when small additions to the staffs had been reported.

### Trade

Retail and wholesale trade continued to release employees; there was a seasonal decrease of 1,482 in the personnel of the 878 firms furnishing data, who had 77,636 employees. The index stood at 107.3 on March 1, 1933, compared with 113.6 at the beginning of March, 1932, when a greater loss had been recorded.

### TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date indicated.

## (2) Unemployment in Trade Unions at the Close of February, 1933

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work outside their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The trend of activity among local trade unions at the close of February was slightly upward from the previous month, the 1,762 labour organizations making returns with a membership total of 150,168 persons showing an unemployment percentage of 24.3 in contrast with 25.5 per cent in January. The situation was, however, somewhat less favourable than in February, 1932, when 20.6 per cent of the members reported were without work. A substantial reduction from January in the unemployment percentage was reported in Nova Scotia, attributable mainly to the failure of a union to make returns for February which had indicated extensive employment losses in the previous month. In Alberta, improvement on a moderate scale from January was reported, the coal mines and manufacturing industries affording a better employment volume, and in Manitoba and Saskatchewan slight gains in activity were recorded. On the other hand, a less favourable employment

tendency was reflected by New Brunswick, Quebec, Ontario and British Columbia unions from January, though the changes were quite slight, being less than 1 per cent in the last three provinces named. Quieter conditions prevailed in every province during February than in the corresponding month last year, Ontario and Quebec, with contractions in employment of about 6 per cent and over 4 per cent respectively, showing the most important losses, followed by declines of around 2 per cent in New Brunswick, Manitoba and Saskatchewan. In the remaining provinces the recessions were but fractional.

A separate tabulation is made each month of unemployment in the largest city in each province, with the exception of Prince Edward Island. Toronto unions reported the most substantial percentage of idleness of the cities compared during February, the situation in this city, however, remaining approximately the same as in January. In Montreal and Vancouver the level of activity was but slightly reduced from January, though the percentages of idleness recorded were pronounced, following next in line to that reported from Toronto. A noteworthy gain in activity from January was registered by Edmonton unions, and in Winnipeg also the situation showed moderate improvement. On the other hand Saint John, Halifax and Regina indicated some lowering of the employment volume available from January. In making a comparison with the returns for February of last year Saint John unions reported employment expansion on a moderate scale, during the month reviewed,

improvement of minor importance being recorded by Halifax and Regina unions. Conditions in Montreal and Toronto were considerably quieter than in February a year ago, the situation declining in each of these cities by slightly over 5 per cent. Contractions, of lesser extent, were reported by Winnipeg, Edmonton and Vancouver unions.

Appearing with this article is a chart which traces the course of unemployment by months from January, 1927, to date. The curve during February dipped slightly from the January

stantially the same as in January, with a slight tendency toward lessened employment. Activity for general labourers was largely curtailed from January, woodworkers showing a moderate reduction in the volume of work afforded with minor contractions apparent among brewery and leather workers. Contrasted with the returns in the manufacturing industries for February last year, when 17.4 per cent of idleness was recorded, the iron and steel trades suffered losses involving the greatest number of members during the month re-

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

level, showing a somewhat better employment volume available though inactivity as indicated by the curve was more pronounced than in February last year, the level attained being above that shown at the end of February, 1932.

From unions in the manufacturing industries 460 reports were received in February, embracing a membership of 40,899 persons, 10,459 or 25.6 per cent of whom were idle on the last day of the month, contrasted with 29.6 per cent in January. Improvement on a noteworthy scale was recorded by iron and steel, garment, glass, and hat and cap workers from January, papermakers, bakers and confectioners, textile workers and cigarmakers showing gains in employment of lesser magnitude. In the printing trades the situation remained sub-

viewed, though a large falling off in employment was also manifest in the garment and textile trades. Cigarmakers and meat cutters and butchers reported extensive percentage curtailment, which however affected few workers. Less favourable conditions than in February last year also prevailed for printing tradesmen, bakers and confectioners, leather, glass, jewellery and brewery workers. On the other hand, the level of activity for papermakers, wood, and hat and cap workers and general labourers was considerably better than in February, 1932.

The coal mining industry showed some advancement from the preceding month in the volume of work afforded during February, the 42 unions making returns with a total of 12,452 members indicating an unemployment per-

centage of 6.8, in contrast with 8.6 per cent of inactivity in January. Practically no change was manifest in the situation from February, 1932, when 6.9 per cent of the members reported were idle. This favourable employment tendency from January was apparent in the Western coal fields, the Nova Scotia situation remaining unchanged from the previous month. A somewhat better employment tendency than in February last year was noted in both the Nova Scotia and Alberta mines, British Columbia unions, however, showing a large drop in activity during the month reviewed. A considerable amount of short time continued to be in evidence among the coal miners.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N.S. and Prince Edward Island | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British Columbia | Canada |
|-------------------|-------------------------------|---------------|--------|---------|----------|--------------|---------|------------------|--------|
| Average 1919..... | 3.1                           | 2.0           | 3.4    | 2.7     | 2.1      | 3.2          | 2.0     | 7.9              | 3.4    |
| Average 1920..... | 1.8                           | 2.0           | 7.2    | 3.4     | 3.1      | 3.2          | 2.8     | 11.2             | 4.9    |
| Average 1921..... | 11.3                          | 8.5           | 16.6   | 9.7     | 8.5      | 7.8          | 7.8     | 23.5             | 12.7   |
| Average 1922..... | 7.1                           | 4.3           | 8.6    | 5.0     | 4.9      | 5.4          | 6.1     | 12.4             | 7.1    |
| Average 1923..... | 3.0                           | 2.0           | 6.7    | 3.7     | 5.8      | 3.0          | 6.0     | 5.8              | 4.9    |
| Average 1924..... | 5.1                           | 4.0           | 10.9   | 6.1     | 6.5      | 4.3          | 5.4     | 5.8              | 7.2    |
| Average 1925..... | 5.0                           | 3.6           | 10.9   | 5.5     | 5.1      | 3.3          | 8.4     | 5.7              | 7.0    |
| Average 1926..... | 7.8                           | 2.1           | 6.8    | 4.2     | 3.6      | 3.0          | 4.9     | 5.5              | 5.1    |
| Average 1927..... | 3.7                           | 1.9           | 6.8    | 4.1     | 4.4      | 3.2          | 4.1     | 5.5              | 4.9    |
| Average 1928..... | 4.0                           | 1.2           | 6.1    | 3.5     | 4.2      | 3.0          | 4.2     | 5.1              | 4.5    |
| Average 1929..... | 4.0                           | 1.6           | 7.7    | 4.3     | 7.1      | 5.3          | 6.4     | 5.9              | 5.7    |
| Average 1930..... | 5.4                           | 3.7           | 14.0   | 10.4    | 9.6      | 10.6         | 13.3    | 11.6             | 11.1   |
| Average 1931..... | 8.5                           | 9.2           | 19.3   | 17.2    | 15.7     | 15.6         | 19.4    | 17.6             | 16.8   |
| Average 1932..... | 9.6                           | 14.4          | 26.4   | 23.7    | 20.0     | 19.5         | 22.6    | 21.6             | 22.0   |
| Feb., 1919.....   | 5.7                           | 2.7           | 4.9    | 5.5     | 2.8      | 4.5          | 4.2     | 7.8              | 5.2    |
| Feb., 1920.....   | 5.1                           | 2.4           | 2.3    | 2.9     | 4.6      | 5.2          | 5.1     | 10.2             | 4.0    |
| Feb., 1921.....   | 14.4                          | 7.3           | 10.7   | 14.8    | 9.9      | 12.1         | 10.3    | 42.1             | 16.1   |
| Feb., 1922.....   | 11.0                          | 7.4           | 7.5    | 10.1    | 10.7     | 9.9          | 8.5     | 20.1             | 10.6   |
| Feb., 1923.....   | 5.7                           | 1.7           | 6.4    | 7.0     | 9.5      | 5.2          | 4.8     | 6.4              | 6.4    |
| Feb., 1924.....   | 3.1                           | 2.7           | 7.9    | 9.1     | 8.0      | 4.8          | 7.6     | 8.1              | 7.8    |
| Feb., 1925.....   | 8.8                           | 4.2           | 11.4   | 9.2     | 9.0      | 5.3          | 9.7     | 9.4              | 9.5    |
| Feb., 1926.....   | 22.2                          | 2.2           | 6.6    | 7.9     | 8.7      | 8.7          | 6.8     | 6.7              | 8.1    |
| Feb., 1927.....   | 3.8                           | 2.3           | 7.2    | 7.2     | 8.1      | 5.3          | 4.2     | 7.4              | 6.5    |
| Feb., 1928.....   | 9.0                           | 1.7           | 9.1    | 5.6     | 7.3      | 6.0          | 4.4     | 8.0              | 7.0    |

| Feb., 1933.....   | 9.2                           | 17.1          | 27.5   | 28.8    | 22.0     | 21.8         | 19.8    | 21.9             | 24.3   |

Building and construction was quieter during February than in the previous month, the percentage of idleness standing at 71.7 in contrast with 69.4 per cent in January. The February percentage was based on the returns received from 230 associations of building tradesmen with a combined membership of 18,943 persons. Bricklayers, masons and plasterers, carpenters and joiners, plumbers and steamfitters, and bridge and structural iron workers all indicated a lower level of activity from January which the improvement manifest among painters, decorators and paperhangers, tile layers, lathers and roofers, hod carriers and building labourers, electrical workers, and granite and stonecutters was not sufficient to offset. In making a comparison with the returns in the building and construction trades for February, 1932, when 65.3 per cent of unemployment was recorded, bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, granite and stonecutters, plumbers and steamfitters, tile layers, lathers and roofers, and hod carriers and building labourers all reported moderate curtailment of employment during the month reviewed. On the other hand, a much better situation was maintained by electrical workers from February last year, and painters, decorators and paperhangers also were afforded a greater volume of activity.

Little change in conditions was manifest in the transportation industries during February from the previous month, the tendency, however, being toward a higher employment volume. This was manifest by the returns tabulated from 785 unions of transportation workers, including a membership of 56,340 persons, 8,656 of whom or 15.4 per cent were idle on the last day of the month contrasted with a percentage of 15.6 in January. Steam railway employees, whose returns constituted over 80 per cent of the entire group membership reported, street and electric railway employees, and teamsters and chauffeurs, all indicated a slightly better situation than in January, which was largely counteracted by declines in employment among navigation workers. Some falling off in activity was noted in the transportation industries from February, 1932, when 13.5 per cent of unemployment was recorded, increased idleness among steam railway employees being an important factor in this retrogressive employment movement, with nominal contractions only apparent among street and electric railway employees. Conditions for navigation workers were substantially better than in February last year, while among teamsters and chauffeurs a fully engaged situation was shown, compared

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

| Month           | Fishing | Lumbering and Logging | Mining | Manufacturing Industries | Vegetable products | Pulp and paper products | Pulp and paper | Printing, publishing and lithographing | Electric current | Wood products | Fibres, textiles and textile workers | Garment workers | Hat, cap and glove makers | Animal products | Iron and its products | Non-ferrous metals | Clay, glass and stone products | Mineral products | Miscellaneous manufactures | Building and construction | Shipping and stevedoring | Steam railway operation | Local transportation | Communication | Telegraph operation | Telephone operation | Trade (retail shop clerks) | Services | Governmental | Miscellaneous | All occupations |      |
|-----------------|---------|-----------------------|--------|--------------------------|--------------------|-------------------------|----------------|--|------------------|---------------|--------------------------------------|-----------------|---------------------------|-----------------|-----------------------|--------------------|--------------------------------|------------------|----------------------------|---------------------------|--------------------------|-------------------------|----------------------|---------------|---------------------|---------------------|----------------------------|----------|--------------|---------------|-----------------|------|

with a moderate unemployment percentage in February a year ago.

Among retail clerks a higher level of activity was noted during February from the previous month, the 6 associations making returns with an aggregate of 1,096 members showing 2.0 per cent of idleness at the close of the month in comparison with a percentage of 5.5 in January. A slight employment reduction was indicated from February, 1932, when only 0.7 per cent of the members reported were without work.

The 75 associations of civic employees from which reports were tabulated in February, covering a membership of 7,449 persons, showed that 557 or a percentage of 7.5 were without work in contrast with percentages of 9.0 in January and 6.3 in February, 1932.

Slacker conditions than in the preceding month prevailed among unions in the miscellaneous group of trades during February, as shown by the returns tabulated from 112 locals with a membership aggregate of 3,955 persons. Of these, 890 or 22.5 per cent were without employment at the end of the month in contrast with 18.6 per cent in January. Hotel and restaurant employees reported a large falling off in activity from January, and the contractions indicated by stationary engineers and firemen were substantial, declines on a much smaller scale being registered by theatre and stage employees. Barbers and unclassified workers, on the other hand, reported a nominally improved situation. A slight drop in activity was reflected in the miscellaneous group of trades from February, 1932, when

20.6 per cent of idleness was recorded, hotel and restaurant employees, as in the previous comparison, showing heavy employment losses, while recessions of more moderate proportions were indicated by theatre and stage employees, and stationary engineers and firemen. A somewhat better employment volume was available to barbers than in February a year ago, gains of less than 1 per cent being apparent among unclassified workers.

From unions of fishermen 3 reports were received in February, including a membership of 755 persons, 13.2 per cent of whom were idle on the last day of the month in contrast with 13.7 per cent in January. In February last year, however, all fishermen were reported at work.

Unemployment among lumber workers and loggers was more pronounced in February than in either the previous month or February a year ago as was manifest by returns tabulated from 4 locals with a membership total of 660 persons. Of these 207 were reported idle at the end of the month, a percentage of 31.4 compared with percentages of 22.9 in January and 21.2 in February a year ago.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1932 inclusive, and also the percentage of unemployment by provinces for February of each year from 1919 to 1930 inclusive, and for each month from January, 1931, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

### (3) Employment Offices Reports for February, 1933

The volume of business transacted by the offices of the Employment Service of Canada during the month of February, 1933, as indicated by the average daily placements effected, showed declines of over 13 per cent and 27 per cent, respectively, from that of the preceding month and from February a year ago. All industrial divisions, except trade and mining, showed decreased placements in comparison with January, the highest losses being in construction and maintenance and farming, and the gains mentioned, nominal only. When compared with February last year, farming and trade alone showed increases, that in the former group being due to additional placements under the Farm Relief Act, but these gains were insufficient to influence to any degree the declines recorded in all other sections, the loss in construction and maintenance being particularly heavy.

The accompanying chart shows the trend of employment from January, 1931, as repre-

sented by the ratio of vacancies notified, and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve, both of vacancies and placements in relation to applications showed a slightly upward trend during the first half of February, but followed a downward course during the latter half of the month under review and at the close of the period each level was about ten points below that recorded at the end of February a year ago. The ratio of vacancies to each 100 applications was 53.6 during the first half and 49.5 during the second half of February, 1933, in comparison with the ratios of 61.3 and 58.9 during the corresponding periods of 1932. The ratios of placements to each 100 applications during the periods under review were 51.6 and 47.3, as compared with 60.0 and 57.4 during the corresponding month of 1932.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during February, 1933, was 989, as compared with 1,145 during the preceding month, and with 1,338 in February a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,914 compared with 2,275 in January, 1933, and with 2,223 during February last year.

The average number of placements made daily by the offices of the Service during February, 1933, was 948, of which 366 were in regular employment and 582 in work of one week's duration or less, as compared with a total daily average of 1,093 during the pre-

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1923, to date:—

| Year                 | Placements |         |         |
|----------------------|------------|---------|---------|
|                      | Regular    | Casual  | Total   |
| 1923.....            | 347,165    | 115,387 | 462,552 |
| 1924.....            | 247,425    | 118,707 | 366,132 |
| 1925.....            | 306,804    | 106,021 | 412,825 |
| 1926.....            | 300,226    | 109,929 | 410,155 |
| 1927.....            | 302,723    | 112,046 | 414,769 |
| 1928.....            | 334,604    | 135,724 | 470,328 |
| 1929.....            | 260,747    | 137,620 | 398,367 |
| 1930.....            | 187,872    | 180,807 | 368,679 |
| 1931.....            | 175,632    | 295,876 | 471,508 |
| 1932.....            | 153,771    | 198,443 | 352,214 |
| 1933 (2 months)..... | 21,227     | 28,810  | 50,037  |

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

ceding month. Placements for February a year ago averaged 1,306 daily, consisting of 394 placements in regular and 912 in casual employment.

During the month of February, 1933, the offices of the Service referred 24,003 persons to vacancies and effected a total of 22,733 placements. Of these, the placements in regular employment were 8,771, of which 5,989 were of men and 2,782 of women, while placements in casual work totalled 13,962. The number of vacancies reported by employers was 18,241 for men and 5,473 for women, a total of 23,714, while applications for work numbered 45,919, of which 35,391 were from men and 10,528 from women.

NOVA SCOTIA

There was a decline of nearly 4 per cent in the number of positions offered through Employment Offices in Nova Scotia during February, when compared with the preceding month, but a gain of 565 per cent in comparison with the corresponding month of last year. Placements were nearly 4 per cent less than in January but 605 per cent above February, 1932. The abnormal gain in placements over February of last year was entirely due to work provided for relief of unemployment on highway construction, and this was the only group to show any increase. Of the losses in other divisions, none of which were important, that

in services was largest. Placements under construction and maintenance numbered 4,113, and in services 199. Of the latter 146 were of household workers. During the month 50 men and 50 women were placed in regular employment.

#### NEW BRUNSWICK

During February, orders received and placements effected by Employment Offices in New Brunswick were 57 per cent less than in the preceding month but nearly 20 per cent higher than during the corresponding month of last year. The highway division of construction and maintenance showed the largest gain in placements over February, 1932, and was responsible for the increase under this comparison, although trade also showed improvement. These gains were offset, in part, by declines in services and manufacturing, the changes in other groups being nominal only. Placements under construction and maintenance numbered 272, and in services 367. Of the latter, 252 were of household workers. There were 64 men and 51 women placed in regular employment during the month.

#### QUEBEC

Orders received at Employment Offices in the Province of Quebec during February called for approximately the same number of workers as in the preceding month, but were 69 per cent above the corresponding month of last year. There was a gain of 3 per cent in placements over January and of nearly 48 per cent over February, 1932. All industrial divisions, except construction and maintenance and farming, participated in the gain in placements over February of last year. None of the changes, however, were large, except in services, where a considerable increase was reported. Placements by industrial divisions included: manufacturing, 70; logging, 64; construction and maintenance, 157; trade, 68; and services, 1,101, of which 939 were of household workers. Placements in regular employment numbered 402 of men and 799 of women.

#### ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during February, were nearly 7 per cent less favourable than in the preceding month and nearly 54 per cent below the corresponding month of last year. There was a decline of nearly 6 per cent in placements in comparison with January and of over 54 per cent when compared with February, 1932. The curtailment of placements on relief work accounted for the substantial decline from February of last year and represented nearly the entire reduction for the Province as a whole,

as losses in the manufacturing industries were largely offset by gains in services, farming and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 299; logging, 360; farming, 276; transportation, 63; construction and maintenance, 4,048; trade, 377; and services, 2,603, of which 1,347 were of household workers. There were 1,958 men and 963 women placed in regular employment during the month.

#### MANITOBA

There was a decline of over 27 per cent in the number of positions offered through Employment Offices in Manitoba during February, when compared with the preceding month and of nearly 43 per cent in comparison with the corresponding month of last year. Slightly higher percentages of loss were also recorded in placements. Considerably less work had been provided in relief of unemployment on highway construction than during February of last year, which was mainly responsible for the decline in placements under this comparison, although services and logging also showed losses. The only gain was in farming, attributable to placements under the Farm Relief plan. Placements by industrial divisions included: logging, 53; farming, 799; construction and maintenance, 509; trade, 41; and services, 646, of which 433 were of household workers. There were 1,192 men and 291 women placed in regular employment during the month.

#### SASKATCHEWAN

The demand for workers, as indicated by orders received at Employment Offices in Saskatchewan during February, was nearly 48 per cent less than in the preceding month, but over 23 per cent greater than during the corresponding month of last year. There was a decline of nearly 46 per cent in placements when compared with January but a gain of 22 per cent in comparison with February, 1932. Farm placements were considerably higher than during February of last year, as many men had been provided with employment under the Unemployment and Farm Relief Act. This increase, supplemented with minor gains in construction and maintenance and mining, accounted for the increase under this comparison. Fewer placements were reported in manufacturing, services, logging and trade, but none of these losses were large. Industrial divisions in which most of the placements were effected during the month were: farming, 784; mining, 25; construction and maintenance, 585; trade, 53; and services, 577, of which 427 were of household workers. Placements in regular employment numbered 994 of men and 331 of women.

## REPORT OF THE EMPLOYMENT OFFICES FOR THE MONTH OF FEBRUARY, 1933

\*136 placements effected by offices since closed.

## ALBERTA

Employment opportunities, as indicated by orders received at Employment Offices in Alberta during February, were over 9 per cent less favourable than in the preceding month and 64 per cent below the corresponding month of last year. There was a decline also in placements of over 11 per cent when compared with January and of nearly 65 per cent in comparison with February, 1932. The loss in placements from February of last year was almost entirely due to the curtailment of relief work on highway construction, although services and mining also showed declines. The only gain of importance was in farming, in which group many placements had been effected under the Farm Relief plan. Placements by industrial divisions were: manufacturing, 25; logging, 71; farming, 574; transportation, 26; construction and maintenance, 531; and services, 296, of which 238 were of household workers. There were 817 men and 174 women placed in regular employment during the month.

## BRITISH COLUMBIA

There was a decline of nearly 12 per cent in the number of positions offered through Employment Offices in British Columbia during February when compared with the preceding month and of over 18 per cent in comparison with the corresponding month of last year. Placements also were over 11 per cent less than in January and nearly 18 per cent below February, 1932. As in Alberta, placements on highway construction were considerably less than in February of last year, which accounted for the decrease under this comparison. Placements in the services group increased, but in farming, manufacturing and transportation small declines were recorded; the changes in other groups were nominal only. The only groups in which any considerable number of placements were effected were construction and maintenance and services, there being 1,792 placements in the former and 583 in the latter division. Of the placements in services 323 were of household workers. During the month 512 men and 123 women were placed in regular employment.

## Movement of Labour

During the month of February, 1933, the offices of the Employment Service of Canada made 8,771 placements in regular employment, 4,160 of which were of persons for whom the employment located was outside the immediate vicinity of the offices at which they were registered. Of the latter, 181 were granted the Employment Service reduced transportation rate, 166 going to points within the same prov-

ince as the despatching office and 15 to other provinces. The reduced transportation rate, which is 2.7 cents per mile with a minimum fare of \$4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Offices in Ontario granted 96 certificates for reduced transportation during February, all provincial. Of these, 92 were issued to bushworkers, 50 travelling from Port Arthur and 42 from Fort William to employment at points within their respective zones. In addition, the Port Arthur zone received 2 mine workers from Timmins. Securing a certificate at Port Arthur also, one shoemaker journeyed to North Bay, while from Toronto one diver was sent to Stratford. In Manitoba, 23 persons took advantage of the Employment Service reduced transportation rate during February, 8 going to centres within the province and 15 to other provinces. The former included one carpenter shipped from St. Boniface to employment within its own zone, and 2 mine labourers, one farm teamster, one farm domestic, and one hotel cook journeying from Winnipeg to centres within the Winnipeg zone. The movement outside the province originated at Winnipeg and comprised the transfer of 3 bushmen, 7 labourers, 1 blacksmith and 1 blacksmith's helper to Port Arthur, 1 farm hand and 1 farm housekeeper to Estevan and 1 farm hand to Regina. Saskatchewan transfers at the reduced rate during February numbered 4, all provincial and effected by the Regina office, which despatched 1 hotel waitress to Saskatoon and 3 teachers within its own zone. The Alberta labour movement during February was to employment within the province, 39 persons receiving reduced transportation vouchers. Travelling from Edmonton 1 hotel cook was conveyed to Drumheller and 29 bushmen, 3 miners, 3 farm hands and 2 farm housekeepers to situations within the Edmonton zone. The Drumheller zone also was the destination of one farm housekeeper sent from Calgary. Persons benefiting by the Employment Service reduced transportation rate in British Columbia during February were 19 in number, all of whom were transported from Vancouver to provincial employment. Included in these were 1 hotel cook journeying to Penticton and 15 mine workers, 2 hotel cooks and 1 farm hand within the Vancouver zone.

Of the 181 persons who were carried at the Employment Service reduced transportation rate during February 110 travelled by the Canadian National Railways, 53 by the Canadian Pacific Railway, 16 by the Pacific Great Eastern Railway and 2 by the Temiskaming and Northern Ontario Railway.

#### (4) Building Permits issued in Canada in February, 1933

The value of the building represented by the permits issued by 61 cities during February, as compiled by the Dominion Bureau of Statistics, was lower by \$256,972 or 22.1 per cent than in the preceding month, and was also less by \$1,938,365 or 68.1 per cent than in February last year; the total stood at \$906,906 during February, 1933, as compared with \$1,163,878 in January, 1933, and \$2,845,271 in February, 1932.

Some 50 cities furnished detailed statistics, showing that they had granted over 80 permits for dwellings valued at about \$291,000, and more than 590 permits for other buildings, estimated to cost in excess of \$575,000. In addition, an engineering project, valued at \$10,000, was reported at Port Arthur. In January, authority was given for the erection of some 90 dwellings and 600 other buildings, estimated at approximately \$240,000 and \$640,000 respectively.

New Brunswick, Ontario, Alberta and British Columbia reported increases in the value of the permits issued as compared with January, 1933; the largest gain, of \$32,701, took place in Ontario. Of the declines in the remaining

provinces, those of \$249,091 or 96.8 per cent in Saskatchewan, and \$113,790 or 34.7 per cent in Quebec were most pronounced.

As compared with February, 1932, all provinces except New Brunswick and British Columbia recorded declines, that of \$911,097 or 72.3 per cent in Ontario being most marked.

Of the larger cities, Vancouver recorded an increase in the value of the permits issued as compared with January, 1933, and also as compared with February, 1932. Toronto showed an increase in the first, but a reduction in the second instance, while in Montreal and Winnipeg, there were decreases in both comparisons. Of the other cities, the following recorded increases in the value of the building authorized during February as compared with January, 1933, and also with February, 1932: Fort William, Guelph, Kamloops, London, New Glasgow, Oshawa, Saint John, Stratford, Three Rivers, and Victoria.

*Cumulative Record for First Two Months, 1933.*—The following table gives the value of the building authorized by 61 cities during February, and in the first two months of each year since 1920, as well as index numbers for

the latter, based upon the total for 1926 as 100. The average index numbers of wholesale prices of building materials in January and February of the same years are also given (1926=100).

The aggregate for the first two months of 1933 was lower than in the same months of 1932 and earlier years of the record, but it should also be noted that the wholesale costs of building materials were also considerably lower in the first two months of the present year than in the months January-February of any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities in February, 1933, in January, 1933, and February, 1932. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

## EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

### Great Britain

THE British *Ministry of Labour Gazette*, March, 1933, summarized the employment situation as follows:—

Employment at February 20, 1933, showed some improvement as compared with January 23. There was a seasonal improvement in the building, public works contracting, and clothing industries and in shipping service. Employment also improved in iron and steel and tinplate manufacture, in general engineering, and in the boot and shoe, woollen and worsted, silk and artificial silk, hemp, rope, and lace industries.

On the other hand there was a slight decline in coal mining, and in the motor vehicle, glass, electrical engineering, electrical apparatus, cotton spinning and carpet industries, in the distributive trades, and in dock and harbour service.

There was an improvement in all parts of the country except Northeast England, where the numbers unemployed showed a slight increase. Employment, however, was still moderate in London and Southeast England, slack in the Southwest and Midlands, and bad in all other areas.

Among the workpeople, numbering approximately 12,808,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at February 20, 1933 (including those temporarily stopped as well as those wholly unemployed), was 22.8,

as compared with 23.1 at January 23, 1933, and with 22.0 at February 22, 1932. The percentage wholly unemployed at February 20, 1933, was 18.7, as compared with 18.9 at January 23, 1933, while the percentage temporarily stopped was 4.1, as compared with 4.2. For males alone, the percentage at February 20, 1933, was 26.0, and for females, 14.1; at January 23, 1933, the corresponding percentages were 26.4 and 14.3.

At February 20, 1933, the number of persons on the registers of employment exchanges in Great Britain was 2,241,168 wholly unemployed, 512,587 temporarily stopped, and 102,883 normally in casual employment, making a total of 2,856,638. This was 46,427 less than a month before, but 155,465 more than a year before. The total included 2,299,741 men, 75,027 boys, 422,617 women, and 59,253 girls.

The persons on the registers included 1,266,157 insured persons with claims for insurance benefit (consisting of those who (a) had paid at least 30 contributions during the preceding two years; (b) had received less than 156 days' benefit in their current benefit years; and (c) if 156 days' benefit had become payable in a previous benefit year ending on or after November 12, 1931, had paid at least 10 contributions since the 156th day of benefit); 1,173,089 insured persons with applications for transitional payments; 264,556 insured persons not in receipt of insurance benefit or transitional payments, and 152,836 uninsured persons.

In Great Britain and Northern Ireland, the total number of persons on the registers of employment exchanges at February 20, 1933, was 2,932,324.

### United States

The Bureau of Labour Statistics of the United States Department of Labour tabulate monthly statistics of employment and pay-rolls based on reports from establishments in 17 major industrial groups. According to the report of the Bureau, the index number of employment in the manufacturing industries in February, 1933, was 57.5 as compared with 56.6 in January, 1933, and 65.6 in February, 1932. The index of pay-roll totals was 36.4 in February, 1933, as compared with 35.8 in January, 1933, and 49.6 in February, 1932. Thus employment in manufacturing industries increased 1.6 per cent in February, 1933, as compared with January, 1933, and pay-rolls increased 1.7 per cent.

These changes are based on reports received from 17,773 establishments in 89 of the principal manufacturing industries in the United States having in February 2,593,672 employees whose combined earnings in one week were \$42,885,896.

In the 16 non-manufacturing groups only 2 industries showed an increase in employment in February, 1933, as compared with January. Six of the industries, however, showed an increase in pay-rolls.

The anthracite mining group reported an increase of 11.9 per cent in employment and 31.4 per cent in pay-rolls; and the canning and preserving industry reported an increase of 2.8 per cent in employment combined with an increase of 4.6 per cent in pay-rolls. Four additional groups reported increases in pay-

rolls over the month interval coupled, however, with small decreases in employment. The changes in employment and pay-rolls in these 4 groups were as follows: hotels, employment decreased less than  $\frac{1}{10}$ th of 1 per cent and pay-rolls increased 0.3 per cent; crude petroleum producing, employment decreased 0.2 per cent and pay-rolls increased 4.5 per cent; bituminous coal mining, employment decreased 0.7 per cent and pay-rolls increased 2.9 per cent; telephone and telegraph, employment decreased 1 per cent and pay-rolls increased 0.4 per cent. In the remaining 10 industrial groups, decreases in both employment and pay-rolls were reported as follows: electric railroad and motor bus operation and maintenance, 0.2 per cent in employment and 0.5 per cent in pay-rolls; banks-brokerage-insurance-real estate, 0.2 per cent in employment and 0.7 per cent in pay-rolls; power and light, 0.4 per cent in employment and 1.9 per cent in pay-rolls; quarrying and non-metallic mining, 0.7 per cent in employment and 4 per cent in pay-rolls; laundries, 1.4 per cent in employment and 4.2 per cent in pay-rolls; wholesale trade, 1.5 per cent in employment and 5 per cent in pay-rolls; metalliferous mining, 2.8 per cent in employment and 1.5 per cent in pay-rolls; dyeing and cleaning, 2.8 per cent in employment and 9.1 per cent in pay-rolls; retail trade, 4.5 per cent in employment and 6.9 per cent in pay-rolls; and building construction, 9.1 per cent in employment and 16.5 per cent in pay-rolls.

According to an estimate by Mr. William Green, president of the American Federation of Labor, the number of unemployed in the United States at the end of February was 12,700,000.

### Resolutions adopted by Saskatchewan Legislature

The Saskatchewan Legislature, on March 14, adopted a resolution as follows:—

"This Legislature, realizing that, under our constitution, interest is a subject to be dealt with by the Dominion Parliament, notes with pleasure the fact that the subject of lowering the interest rate is now having the serious attention of a Committee of the Parliament of Canada, and urges the said Committee and the Parliament of Canada to deal with this problem in the interests of the nation, the provinces, municipalities, and the public generally."

A resolution was adopted unanimously on the same date as follows:—

"This legislature urges upon the Federal Government the establishment at an early date

of a national system of unemployment insurance on a contributory basis by the Federal Government, the employer and the employee, and the setting up of a representative national commission to provide for unemployment insurance on an actuarially sound basis, with power to co-operate with the provinces and municipalities with a view to consider and provide ways and means of establishing at as early a date as possible those who are now unemployed in some useful and gainful employment. With this end in view the Legislature is of the opinion that the Government of Saskatchewan should consent to such constitutional amendments as are necessary to vest full authority in the Federal Government in the matter of unemployment insurance."

## FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

**T**HE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the *LABOUR GAZETTE*, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30, 1930. The text of this measure appeared in the April, 1930, issue, page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(a) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(b) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

The Act was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions of wages and as to the application of the eight-hour day.

With respect to contracts for other classes of work, the Fair Wages Policy of the Government of Canada (which has been in effect since 1900 and was expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924) requires that they must contain either a fair wage schedule based on the current wages rates and working hours in the

district, or a general fair wage clause requiring adherence to the current wage rate and working hours in the district for the different classes of labour employed or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, unless for the protection of life and property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any service performed or for any hours of labour, wages according to the rates fixed thereby by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid.

The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or

employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages, rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following Fair Wages Clause:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the Contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages, rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records show-

ing the names, trades and address of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed claim therefore may be filed with the Minister of the Department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violation to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the General Fair Wages Clause above mentioned:—

#### DEPARTMENT OF NATIONAL DEFENCE

##### *Contract in Group "A" (Construction, etc.)*

Construction of a radio station and a stores building at Cameron Bay, N.W.T. Name of contractor, Murphy Services Ltd., Edmonton,

Alta. Date of contract, March 20, 1933. Amount of contract, \$3,459. The General Fair Wages Clause was inserted in the contract.

#### ROYAL CANADIAN MOUNTED POLICE

##### *Contract in Group "A" (Construction, etc.)*

Alterations to the electric lighting system of the R.C.M. Police Barracks at Regina, Sask. Name of contractors, The Lorne Electric Company, Regina, Sask. Date of contract, March 22, 1933. Amount of contract, \$1,528. A fair wages schedule was inserted in the contract as follows:—

| Trade or class of labour           | Rates of wages not less than | Hours of labour not more than |
|------------------------------------|------------------------------|-------------------------------|
|                                    | per hour                     | per day                       |
| Electricians (inside wiremen)..... | \$0 90                       | 8                             |
| Electric linesmen.....             | 0 90                         | 8                             |
| Cable splicers.....                | 0 90                         | 8                             |
| Common labourers.....              | 0 40                         | 8                             |

In any cases where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this contract.

#### POST OFFICE DEPARTMENT

Following is a statement of payments made in March, 1933, for supplies ordered by the Post Office Department under contracts which

were subject to the regulations for the suppression of the sweating system, the securing of payment to the workers of fair wages, and the performance of the work under proper sanitary conditions:—

#### Nature of Orders

|  | Amount    |
|--|-----------|
| <i>Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.—</i> |           |
| Pritchard-Andrews Co. of Ottawa, Ltd. ....                                       | \$ 561 68 |
| <i>Making and Repairing Rubber Stamps, Dater, etc.—</i>                          |           |
| Pritchard-Andrews Co. of Ottawa, Ltd. ....                                       | 137 12    |
| Capital Rubber Stamp Works, Ottawa, Ont. ....                                    | 38 90     |
| <i>Making and Supplying Letter Carriers' Uniforms, Shirts, etc.—</i>             |           |
| Grant-Holden-Graham Limited, Ottawa, Ont. ....                                   | 5,249 27  |
| J. A. Humphrey & Son, Moncton, N.B. ....   | 2,260 36  |

## RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

### Construction: Buildings and Structures

TORONTO, ONTARIO.—THE MASON AND GENERAL CONTRACTORS AND THE GENERAL CONTRACTORS' SECTIONS OF THE TORONTO BUILDERS' EXCHANGE AND THE BRICKLAYERS, MASONS AND PLASTERERS INTERNATIONAL UNION, LOCAL No. 2 (BRICKLAYERS) AND No. 26 (STONEMASONS).

Agreement to be in effect from January 16, 1933, to December 31, 1933; notice to be given of any change.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, October, 1931, page 1139, with the following exception:

Wages per hour for bricklayers and stonemasons: 90 cents (a reduction of 20 cents per hour).

Hours are unchanged at 40 per week, with time and one half for overtime and double time for all work on Saturdays, Sundays and holidays.

### Transportation and Public Utilities: Water Transportation

**NORTH VANCOUVER, B.C.—CITY OF NORTH VANCOUVER AND THE CANADIAN MERCHANT SERVICE GUILD ON BEHALF OF THE MASTERS AND CERTIFIED DECK OFFICERS OF THE NORTH VANCOUVER FERRIES.**

Agreement to be in effect from March 1, 1933, to February 28, 1934.

Hours: Regular shifts to be 8 hours. Masters and mates will take the long afternoon shifts (10 hours) will be granted one additional day free from duty on full pay after working five of such long shifts. Masters and mates employed to relieve on long shifts during such special leave days to be paid \$8 and \$6.50 per shift respectively. All other relief duties to be paid at regular monthly rates. One day of 24 hours in every seven free from vessel. Two weeks' holiday annually on full pay after one year's continuous service.

Overtime: Masters \$1 per hour, mates 85 cents. Time moving vessels into leads and tying up not to be considered overtime.

Wages: The basic rate to remain at \$210 per month for masters and \$165 for mates, but a second reduction of 10 per cent from these

rates to be in effect from March 1, 1933, which is to be restored if conditions improve sufficiently to warrant it. The wage rates under such reduction to be \$171 for masters and \$133.65 for mates.

**NORTH VANCOUVER, B.C.—CITY OF NORTH VANCOUVER AND THE NATIONAL ASSOCIATION OF MARINE ENGINEERS OF CANADA, INCORPORATED, COUNCIL NO. 7, ON BEHALF OF THE ENGINEER OFFICERS OF THE NORTH VANCOUVER CITY FERRIES.**

Agreement to be in effect from March 1, 1933, to February 28, 1934.

Hours: 8 per day. One day of 24 hours free from vessel in every seven days. Two weeks' holidays with full pay after each year's continuous service.

Overtime: chief engineers 90 cents per hour; assistant engineers 80 cents per hour.

Wages: The basic rates to be \$200 per month for chief engineers and \$185 for assistant engineers, but a second reduction of 10 per cent is effective from March 1, 1933, which is to be restored if conditions improve sufficiently to warrant it. The wage rates under such reduction to be \$162 per month for chief engineers and \$149.85 for assistant engineers.

## SEVENTH CENSUS OF CANADA

### Bulletins showing Details of (1) Unemployment and (2) earnings among Wage Earners in Principal Cities

**I**N connection with the Seventh Census of Canada, 1931, the Dominion Bureau of Statistics is publishing a series of bulletins giving further details in regard to unemployment in various cities throughout the Dominion, and also as to the earnings and weeks employed of the wage earners in these cities. The first three bulletins to be issued deal respectively with Saint John, N.B., Winnipeg, Man., and Vancouver, B.C. The statistics of wage earners at work and not at work on June 1, 1931, together with causes given by wage earners reporting as not at work on that date were reproduced in the *LABOUR GAZETTE*, November, 1932, page 1188. The statistics of unemployment in respect to cities and towns throughout Canada at the date of the Census were given in the *LABOUR GAZETTE*, July, 1932, page 784. In the present series of bulletins the number of wage earners for the twelve months' period ended June 1, 1931, is shown by sex under two main heads, (1) Unemployment by industries, occupations and causes, (2) Earnings by occupations, age groups and time worked. The figures are subject to revision.

The term "wage-earner" as used in the Census means a person who works for salary or wages, whether he is a bank manager or an unskilled labourer.

The term "unemployment" as used in the Census means any loss of time involving a reduction in wages.

The classification of wage-earners by industries and occupations is arranged so as to make provision for larger industrial and occupational groupings. It is important to distinguish between the meaning of an occupational as contrasted with an industrial classification. Under the heading "Construction," for example, in the industry tables are included all persons employed therein, regardless of occupation, whereas under the same title in the occupational tables are listed all persons following occupations regarded as "building trades" irrespective of the industries in which they may be pursued.

The period of unemployment during the twelve months preceding the date of the Census, June 1, 1931, was obtained for every wage-earner, together with a statement of the cause of such unemployment, whether it was no job, temporary layoff, illness, accident, strike or lockout, etc. The wage-earner was asked to state how many weeks, if any, he or she was away from work for each of these causes. In addition he was requested to report the total amount of money earned in the census year.

| All ages.....           | 997                     | 546    | 23.77                   | 11.60  | 41.97                                 | 47.13  |

(Continued from page 426)

Unemployment among female wage-earners being much less serious, both in total amount and per individual wage-earner, than among male wage-earners, the detailed tables for the sexes are presented separately.

The Bulletins contain full tables showing (i) in respect to unemployment, the numbers of male and female workers, 10 years of age and over, losing time during the period June 1, 1930, to June 1, 1931, by industry and cause

of unemployment, and also by occupation and cause of unemployment; and (2) earnings and weeks employed, by occupations and age groups of male and female wage earners during the same period.

The following summary tables show, for each city dealt with, the principal results obtained by the Seventh Census in regard first, to unemployment, and second, to earnings and weeks employed.

TABLE VII.—WAGE-EARNERS REPORTING EARNINGS, BY SEX AND SIX AGE GROUPS, SHOWING THE AVERAGE YEARLY EARNINGS, AVERAGE WEEKLY EARNINGS AND AVERAGE NUMBER OF WEEKS EMPLOYED, FOR THE CENSUS YEAR 1921

| Ages*                  | Average yearly earnings |        | Average weekly earnings |        | Average number of weeks of employment |        |
|------------------------|-------------------------|--------|-------------------------|--------|---------------------------------------|--------|
|                        | Male                    | Female | Male                    | Female | Male                                  | Female |
|                        | \$                      | \$     | \$                      | \$     | No.                                   | No.    |
| 10-14 years.....       | 260                     | 175    | 5.97                    | 5.33   | 43.35                                 | 33.08  |

<sup>1</sup> Does not include wage-earners not reporting earnings. The omission is slight.

## STEAM RAILWAY OPERATION IN CANADA IN 1931

STATISTICS of steam railways in Canada for the year ended December 31, 1931, have been issued in the annual report on the subject by the Dominion Bureau of Statistics. The report states that the freight traffic has declined steadily since August, 1929, and that the total revenue freight in tons carried one mile each year was less than in the previous year as follows: 1929 by 14 per cent, 1930 by 16 per cent, and 1931 by 14 per cent, being in the latter years only 62 per cent of that in 1928, the peak year; also that passenger traffic had fallen off still more, that for 1931 being only 56 per cent of that for 1928. Gross operating revenues of \$358,549,382 were 21 per cent lower than in 1930, while operating expenses of \$321,025,587 were lower by 16 per cent. The heaviest decrease in freight traffic was in mine products, particularly in coal, iron ore, gravel and stone, but pulpwood, lumber, structural iron, cement, brick, lime and plaster showed heavy decreases. Shipments of bituminous coal and iron were somewhat affected by the opening of the Welland Ship Canal which enabled these commodities to be carried by water to Lake Ontario ports.

The number of employees per month averaged 154,569 as compared with 174,485 in 1930 (187,846 in 1929), a decrease of 11.4 per cent, and the pay roll was reduced from \$268,347,374 to \$229,499,505, or 14.5 per cent. A table is included showing the fluctuations in employment by months on the larger railways. This indicates that out of 153,299 positions, 12 months' employment was afforded by 130,802 positions, 11 months by 1,476, 10 months by 795, 9 months by 12,211, 8 months by 272, 7 months by 663, 6 months by 196, 5 months by 1,683, 4 months by 2,100, 3 months by 1,326, 2 months by 787, and one month by 988 positions.

A table on employees, salaries and wages shows for the various classes and occupations for 1930 and 1931 the average number of employees, the total hours on duty, total salaries or wages paid, the average number of hours or days during the year worked, the average earnings per employee per hour or per day, and the average earnings per year. Certain of these figures appeared in the supplement to the LABOUR GAZETTE for January, 1933, on Wages and Hours of Labour in Canada, 1930.

1931 and 1932, in an appendix, namely, the average earnings per hour for each class on hourly or equivalent rates, from 1926 to 1931, with the average number employed in 1931, and the total hours on duty. The employees on hourly or equivalent rates averaged 60.2 cents per hour in 1931 as compared with 59.5 cents in 1930, hours worked per year averaged 2,345 for the year as compared with 2,471 in 1930, and yearly earnings averaged \$1,411.69 in 1931 as compared with \$1,470.79 in 1930. Employees not paid on an hourly basis, including officials, averaged \$5.909 per day, as compared with \$5.864 in 1930, and days worked during the year averaged 300 as compared with 310 in 1930, the annual compensation averaging \$1,773.98 in 1931 as compared with \$1,817.63 in 1930. (Rates of pay for those on salaries were reduced early in 1931 and rates of pay for train, engine and telegraph employees were made subject to a ten per cent deduction from December 1, 1932. The same deduction was made applicable to all other classes of employees early in 1931, LABOUR GAZETTE, April, 1932, page 452.) All classes were subject to considerable reduction in staff owing to the falling off in traffic. The average number on an hourly basis of pay in 1931 was 123,391, as compared with 140,703 in 1930, and those on other than an hourly basis numbered 31,178 in 1931 as compared with 33,782 in 1930.

Salaries of executives, general officers and assistants, numbering 851 in 1931, averaged \$6,241.37, and for division officers, numbering 1,098, \$3,532.80. Clerks, numbering 16,396, averaged \$1,419.21. General foremen, 58 in number, in maintenance of equipment work, averaged \$3,223.73, while department and gang foremen, 2,278 in number, averaged \$2,409.28. Building and bridge department foremen, 425 in number, averaged \$1,781.04.

Train dispatchers and traffic supervisors, 505 in number, averaged \$3,180.94 for the year and \$1.23 per hour. Road passenger engineers and motormen, 1,079 in number, averaged \$3,308.33, \$1.52 per hour; road freight engineers and motormen, 2,206 in number, averaged \$2,956.99, \$1.16 per hour. Passenger conductors, 820 in number, averaged \$2,876.07, \$1.16 per hour; road freight conductors, 1,799 in number, averaged \$2,653.36, \$1.01 per hour. Passenger firemen and helpers, 1,039 in number, averaged \$2,491.28, \$1.18 per hour, and road freight foremen and helpers, 2,432 in number, averaged \$2,021.25 and 87 cents per hour. Road freight brakemen numbering 3,980 averaged \$1,911.70 and 78.6 cents per hour, and passenger brakemen, etc. numbering 1,835, \$2,024.69 or 85 cents per hour. Freight handlers, 4,225 in number, averaged \$1,091.85 or 50.2 cents per hour, and labourers, 365 in number, 40.4 cents per hour. All classes of employees engaged in the move-

ment of trains, handling freight, etc., on an hourly basis of pay numbered 39,293 and averaged 76.4 cents per hour and \$1,902.35 for the year, while those on a daily basis numbered 2,293 and averaged \$5.87 per day and \$1,924.75 for the year.

In the maintenance of way and structures all classes on an hourly basis of pay numbered 35,831 and averaged 45.5 cents per hour, while 521 on a daily basis averaged \$6.15 per day. The most numerous class, sectionmen, numbered 17,345, and averaged 42.5 cents per hour and \$1,037.10 for the year, while labourers numbered 7,305 and averaged 29.9 cents per hour and \$720.87 for the year. Carpenters and bridgemen numbered 2,256, their earnings averaging 61.3 cents per hour and \$1,446.99 for the year. Section foremen numbered 6,377, and averaged 59.6 cents per hour and \$1,493.67 for the year. Masons, bricklayers, plasterers and painters numbered 225, averaged 64 cents per hour and \$1,448.72 for the year. Telegraph and telephone linemen and groundmen numbered 192, averaging 47.4 cents per hour and \$1,323.86 for the year.

In the maintenance of equipment, all classes on an hourly basis of pay numbered 36,387, averaging 63.7 cents per hour and \$1,264.10 for the year. Machinists numbered 4,584, averaging 80.2 cents per hour and \$1,487.65 for the year. The various classes of carmen averaged from 74.2 cents per hour to 83.1 cents and from \$1,300.97 to \$1,473.27 for the year, the total number being approximately 10,000. Car cleaners and labourers, etc., numbered nearly 8,000 and averaged from 41.2 cents per hour to 43.5 cents, and from \$808.30 to \$1,068.21 for the year.

Accidents resulting from the movement of trains, at highway crossings and in shops, etc., are given, those to employees and other persons being shown separately. The number of employees killed in connection with movement of trains was 42 as compared with 81 in 1930, 104 in 1929, and 114 in 1928, while the number injured was 1,131 in 1931 as compared with 1,477 in 1930, 2,028 in 1929, and 2,214 in 1928. The number of passengers killed in 1931 was three as compared with 15 in 1930, 20 in 1929, and 15 in 1928, while the number injured was 369 in 1931 as compared with 488 in 1930, 406 in 1929, and 326 in 1928. Most of the fatal accidents occurred to trespassers, there being 113 killed in 1931 as compared with 205 in 1930, 148 in 1929, and 156 in 1928. The number of employees and others killed from causes other than movement of trains was 14 in 1931 as compared with 38 in 1930, 19 in 1929, and 28 in 1928, the number injured being 4,952 in 1931 as compared with 8,371 in 1930, 10,699 in 1929, and 10,548 in 1928, most

of these occurring to shopmen and maintenance of way employees.

The number of persons killed at highway crossings was 84 in 1931 as compared with 113

in 1930, 128 in 1929, and 183 in 1928, the number injured being 321 in 1931, 414 in 1930, 456 in 1929, and 459 in 1928. Most of these occurred to people riding in automobiles.

## PRICES, RETAIL AND WHOLESALE, IN CANADA, MARCH, 1933

### Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was little changed during the month, while the Dominion Bureau of Statistics index number of wholesale prices showed the most substantial advance recorded any month since August, 1929, due mainly to higher prices for farm products, milled products, meats, non-ferrous metals and raw cotton.

In retail prices the cost per week of a list of twenty-nine staple foods in terms of the average retail prices in sixty-nine cities was \$6.67 for March as compared with \$6.70 for February; \$7.27 for March, 1932; \$9.14 for March, 1931; \$11.67 for March, 1930; \$11.46 for March, 1926; \$10.54 for March, 1922; \$16.92 for June, 1920 (the peak); \$7.68 for March, 1914. Prices of lard, eggs, bread, evaporated apples, sugar, tea and potatoes were somewhat lower, while the prices of butter, veal and mutton were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged \$15.59 at the beginning of March as compared with \$15.61 for February; \$17.16 for March, 1932; \$19.47 for March, 1931; \$21.96 for March, 1930; \$21.77 for March, 1926; \$26.92 for July, 1920 (the peak); and \$14.35 for March, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was considerably higher at 64.4 for March as compared with 63.6 for February; 69.1 for March, 1932; 74.5 for March, 1931; 91.8 for March, 1930; 101.3 for March, 1926; 98.3 for March, 1922; 164.3 for May, 1920 (the peak); and 64.7 for March, 1914. Ninety-one prices quotations were higher, fifty-seven were lower and three hundred and fifty-four were unchanged.

In the classification according to chief component materials four of the eight main groups were higher, two were lower and two were unchanged. The groups which advanced were: the Vegetables and Vegetable Products group, because of higher prices for grains, flour, bran and shorts which more than offset lower prices for canned fruits and fresh vegetables; the Animals and their Products group, due to advances in the prices of steers, hogs, lambs,

hides, butter, fresh and cured meats, which more than offset declines in the prices of calves and eggs; the Non-Ferrous Metals and their Products group, due to advanced quotations for antimony, copper, lead and zinc; and the Chemicals and Allied Products group, because of advances in the prices of hemlock and logwood extract. The Iron and its Products group and the Non-Metallic Minerals and their Products group were lower, the former because of lower prices for galvanized wire and hot rolled and annealed steel sheets which more than offset higher quotations for automobile body plates, and the latter due mainly to lower prices for gasoline and cement. The Fibres, Textiles and Textile Products group and the Wood, Wood Products and Paper group were unchanged. In the former higher prices for raw cotton and silk offset declines in the prices of hessian silk hosiery and worsted cloth yarns.

In the grouping according to purpose both consumers' goods and producers' goods were higher, the former due to advances in the prices of flour, bran, shorts, fresh and cured meats which more than offset lower prices for vegetables, canned fruits, eggs, fish and worsted cloth yarn, and the latter due to increases in the prices of grains, steers, lambs, hogs, raw cotton, tin and copper which more than offset lower prices for hay, calves, raw wool, cedar lumber and gasoline.

In the grouping according to origin raw and partly manufactured goods were higher, mainly because of increased quotations for grains, steers, hogs, lambs, raw cotton and non-ferrous metals. Fully and chiefly manufactured goods also advanced, higher prices for flour, bran, shorts, cured meats, butter, cheese and lard being more than sufficient to offset declines in the prices of vegetables, canned fruits, yarn, silk hosiery, iron and brass. Canadian farm products were higher, while articles of marine origin declined. Articles of forest origin and articles of mineral origin were unchanged.

### EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of March of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in

(Continued on page 448)

**COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL, AND LIGHTING, AND RENT IN  
TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA**

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family

\* Prior to 1926 number of commodities was 236.

(Continued from page 440)

sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun it was decided to extend the list of foods to 40, and in 1920 the

list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil; and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evapor-

\*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18%; Clothing, 18%; Sundries, 20%.

ated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912, in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

## Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to permit the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1921, quarterly from 1922 to 1930, and monthly since January, 1931. As stated in the above-

mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

### Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.6; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.4; 1930, 64.7; 1931, 64.1; 1932, 63.8.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report, Vol. 2, page 318) and bringing the figures down to 1932. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption on the basis of figures in 1926 as 100, as follows: 1923, 108.3; 1924, 105.1; 1925, 101.7; 1926, 100.0; 1927, 99.0; 1928, 97.1; 1929, 94.6; 1930, 92.3; 1931, 89.6.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1931 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 128.9; 1928, 128.5; 1929, 128.0; 1930, 126.6; 1931, 125.1; natural gas, 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 166.9; 1928, 159.3; 1929, 159.5; 1930, 158.8; 1931, 157.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-15, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

### Retail Prices

Beef prices showed little change in the average, increases in some localities being offset by declines in others. Sirloin steak averaged 20.5

cents per pound in March the same figure as for February and shoulder roast averaged 10.9 cents per pound in March and 11 cents in February. Veal and mutton were slightly higher, the former being up from 12.2 cents per pound in February to 12.5 cents in March and the latter from 17.3 cents per pound to 17.7 cents. Pork prices showed little change, fresh leg roast averaging 12.1 cents per pound. Breakfast bacon was slightly lower at 17.2 cents per pound in March as compared with 17.4 cents in February. In fish salt cod was down from an average price of 17.9 cents per pound in February to 17.3 cents in March, while finnan haddie declined from 16.7 cents per pound to 16.4 cents. Lard was slightly lower in most localities, the price averaging 11.5 cents per pound in March as compared with 11.8 cents in February.

The price of fresh eggs showed a slight seasonal decline in most localities except in the prairie provinces where an upward movement occurred. The Dominion average was 27.8 cents per dozen in March as compared with 28.8 cents in February and 39.1 cents in January. Cooking eggs showed little change at 22.6 cents per dozen. The price of milk was unchanged at an average price of 9.4 cents per quart. Butter prices were slightly higher in most localities, dairy being up from 22.3 cents per pound in February to 23.1 cents in March and creamery from 25.7 cents per pound to 26.9 cents.

The price of bread was fractionally lower at 5.5 cents per pound. The prices of canned tomatoes and peas were slightly lower, the former averaging 11.6 cents per tin and the latter 11.5 cents. Potatoes showed little change at an average price of 93 cents per ninety pounds, declines in the Maritime provinces being offset by increased prices in Ontario. Canned peaches were down from an average price of 20.9 cents per tin in February to 20.5 cents in March. Granulated sugar averaged 5.6 cents per pound in March as compared with 5.7 cents in February and 6.1 in March, 1932. The price of tea was again slightly lower than in the previous month at 41.2 cents per pound as compared with a price of 50.9 cents per pound in March, 1932. The price of anthracite coal showed little change at \$15.35 per ton. Coke was down from an average price of \$11.84 per ton in February to \$11.72 in March. No changes were reported in rent.

### Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

The price of grains averaged higher in March than in the previous month. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was up from 45·8 cents per bushel to 49·1 cents. The high price for the month was 53·2 cents per bushel reached on March 16th and the low 46 cents reached on the 2nd. The price at Winnipeg advanced sharply about the middle of the month following the bank holiday and the re-opening of the exchanges in the United States. This increase was not reflected in the Liverpool and Chicago markets and the price at Winnipeg declined. Toward the end of the month some advance occurred caused, it was said by a reduction in world shipments and an unfavourable crop outlook in the United States. In coarse grains flax was up from an average price of 77·7 cents per bushel to 79·3 cents, western oats from 23·3 cents per bushel to 24·5 cents, rye from 31·9 cents per bushel to 33·9 cents and barley from 27·5 cents per bushel to 28·9 cents. Flour at Montreal was 10 cents per barrel higher at \$4.60, while bran and shorts each advanced \$1.13 per ton, the former to \$17.38 and the latter to \$18.38. Raw sugar at New York advanced from 83½ cents per cwt. to \$1.19 (Canadian funds), while granulated at Montreal was unchanged at \$4.09 per hundred pounds. Ceylon rubber at New York was slightly higher at 3·6 cents per pound as compared with 3·5 cents in February. In

live stock, prices were mainly higher, choice steers at Toronto being up from \$4 per hundred pounds to \$4.36 and at Winnipeg from \$3.27 per hundred pounds to \$3.71. Bacon hogs advanced at Toronto from \$3.81 per hundred pounds to \$5.11 and at Winnipeg from \$3 per hundred pounds to \$4.53. This same grade at Montreal advanced \$1.53 per hundred pounds to \$5.55. Lambs at Toronto rose from \$6.03 per hundred pounds to \$6.42 and at Winnipeg from \$4.79 per hundred pounds to \$5.24. The price of creamery butter at Toronto advanced from 23·9 cents per pound to 26·7 cents and at Montreal from 23·9 cents per pound to 27·1 cents. Fresh eggs at Toronto were down from 23·6 cents per dozen to 21·8 cents and at Winnipeg from 27·5 cents per dozen to 24·3 cents. Cold storage holdings were stated to be 69 per cent lower than a year ago and 80 per cent below the quantities on February 1. The price of raw cotton advanced from an average of 7·2 cents per pound to 8·2 cents (Canadian funds). Silk at New York rose from \$1.54 per pound to \$1.60. In non-ferrous metals electrolytic copper at Montreal advanced from \$7.05 per hundred pounds to \$7.18, while tin at Toronto advanced from 32 cents per pound to 33½ cents. The price of Portland cement at Vancouver was down from \$2.76 per barrel to \$2.60.

### International Federation of Trade Unions

The executive committee of the International Federation of Trade Unions, at a meeting held at Berlin during February under the presidency of W. M. Citrine (Great Britain), approved the text of a draft program of social policy, to be submitted to the congress of the Federation, which is to be held at Brussels next July. The committee also adopted the draft of an international educational program.

With slight amendments the demands for economic planning which have been formulated by the Federation will be submitted by the executive to the Labour and Socialist International for further consideration. It is proposed to submit these demands for endorsement to the Brussels Congress. When approved, the demands will serve as guiding principles for the future economic policy of the International Federation of Trade Unions.

A joint meeting with the executive of the Labour and Socialist International was to be held early in April to consider the attitude to be adopted towards the World Economic Con-

ference. The committee proposed to submit demands on behalf of the workers to the Conference in the form of a memorandum embodying the views of both the International Federation of Trade Unions and the Labour and Socialist International.

The General Council of the International Federation of Trade Unions, together with the representatives of the international trade secretariats, was to hold a joint meeting early in April, when the question of a large-scale international campaign in favour of the introduction of the 40-hour working week was to be discussed. It was also proposed to institute a campaign to secure economic disarmament and to win public opinion for reasonable and practical solutions of the financial, credit, currency and customs questions.

The Quebec Legislature, on April 12, rejected by 47 to 10 votes, a motion proposed by Mr. Aimé Guertin, of Hull, that the Province of Quebec should enter the Dominion system of old age pensions.

## PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and certain other countries. The index numbers of the cost of living are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

### Great Britain

**WHOLESALE PRICES.**—The Board of Trade index number, on the base 1924=100, was 59·5 for February, a decline of 1·3 per cent for the month. Foods declined 2 per cent, due principally to a fall in cereals. Non-foods were 1 per cent lower showing declines in all groups with the exception of a slight rise in iron and steel.

The *Statist* index number, on the base 1867-1877=100, was 77·0 at the end of February as compared with 77·8 at the end of January, a decline of 1 per cent for the month. Foods were 0·7 per cent lower, a substantial decline in vegetable foods being almost counteracted by advances in animal food and sugar, coffee and tea. Non-foods were 1·4 per cent lower, the greatest decline occurring in the textile group.

**COST OF LIVING.**—The Ministry of Labour index number, on the base July, 1914=100, was 139 at the beginning of March, a decline of 1·4 per cent for the month, due entirely to a fall of 2·5 per cent in food prices, chiefly eggs, butter and milk.

### France

**WHOLESALE PRICES.**—The index number of the General Statistical Office, on the base 1914=100 (gold basis), was 79 for February, showing no change from the January level. Foods as a whole were unchanged, advances in

animal foods and the sugar, coffee and cocoa group being counteracted by a decline in vegetable foods. Industrial materials as a whole were also unchanged as advances in minerals and metals and textiles offset a decline in miscellaneous commodities.

### Germany

**COST OF LIVING.**—The official index number, on the base 1913-1914=100, was 116·9 for February, a fall of 0·4 per cent for the month. Small decreases were noted in food, clothing and sundries, while rent and heat and light were unchanged.

### South Africa

**COST OF LIVING.**—The index number of the Census and Statistics Office, on the base 1910=1000, was 1226 for January, a decline of 2 per cent for the month, although the food group showed a small advance.

### United States

**WHOLESALE PRICES.**—The Bureau of Labour Statistics index number, on the base 1926=100, was 59·8 for February, a fall of 2 per cent for the month. Every one of the ten groups was included in the general decline.

The *Annalist* index number, on the base 1913=100, was 82·0 for March, an advance of 1·9 per cent for the month. Increases were noted in farm products, food products, textile products, metals and building materials with decreases in fuels and miscellaneous commodities. Chemicals were unchanged.

**COST OF LIVING.**—The index number of the National Industrial Conference Board, on the base 1923=100, was 72·1 for February, a decline of 2·2 per cent for the month. All groups were included in the general decline.

TABLE I.—INDEX NUMBERS OF RETAIL PRICES OF FOODS AND COST OF LIVING IN CANADA AND CERTAIN OTHER COUNTRIES  
(Base figure 100 except where noted)

| Country             | Canada   |   | Chile             |                                | Peru           |                            | United States                               |   | Austria   |                                   | Belgium      |                          | Bulgaria                        |                                   | Czecho-Slovakia |                   |

## RECENT LEGAL DECISIONS AFFECTING LABOUR

### Wages on Public Works must Conform with Fair Wage Provisions

A carpenter-joiner was employed by a general contractor on the construction of a foundry and garage for the Canadian National Railways at Montreal. This work was covered by a Dominion Fair Wages Schedule, which required that carpenters on the job should be paid at the rate of 85 cents an hour. On this basis the employee in question claimed that he should have received \$1,401.10 for his work, instead of the sum of \$794.70 paid to him by the contractor; and he asked the Superior Court at Montreal for an order to the contractor, or failing him to the Railways, for the payment within eight days of the balance still due. The contractor opposed the application, pointing out that the plaintiff had agreed to a lower rate of wage, having accepted payment at a lower rate and given receipts each week without question. The claim, the contractor alleged, was the result of an afterthought on the part of the plaintiff after the termination of the work. The plaintiff explained he had signed the receipts as a matter of form, on the understanding that any question as to the amounts he received from time to time would be settled by the Minister of Labour at Ottawa.

Mr. Justice Surveyer, in giving judgment for the plaintiff, pointed out that the latter had entered the contractor's service without any understanding as to the rate of wages to be paid (In this connection he referred to the decision of the Superior Court at Quebec in the case of *Juneau versus Plamondon*, which was reported in the LABOUR GAZETTE, September, 1931, page 1052). The contract between the railways and the employer contained the Dominion Fair Wage provision, which was in practically the same terms as section 244 of the Railway Act (Revised Statutes of Canada, 1927, chapter 170), the latter provision applying not only to railway construction work, but "in every case in which the Parliament of Canada votes financial aid or subsidy by way of subsidy or guarantee towards the cost of railway construction." His Lordship cited the Fair Wages Resolution adopted by the House of Commons in 1900, and proceeded: "The desire of the House of Commons as expressed in the above resolution was acceded to in the legislation of 1903, the basis for section 244 of the present (Railway) Act, as well as in the Dominion Act of 1930 (the Fair Wages and Eight Hour Day Act, 1930); the only difference between workmen employed by

railways receiving subsidies and workmen employed on other works aided by grant of Dominion public funds is that in the first case the Minister of Railways, not the Minister of Labour, is the final authority in the event of a dispute. The purpose of the legislation," he continued, "is clearly not to restrict the application of the fair wage provision only to workmen engaged in railway construction, but to cover all those employed in works aided by Dominion government grants. It follows that the plaintiff, who was employed in the construction of a garage for the Canadian National Railways, is protected by the Fair Wage regulations. If any exception thereto is permitted, it can only be as the result of express agreement, and not of the employee's act in having accepted underpayment without protest. The owner of an undertaking that is receiving a subsidy from the Government is deemed to have undertaken the payment of 'fair wages' to the workmen employed by his contractor. If it were possible for the contractor to evade this obligation by having his workmen accept lower wages, he would thereby enrich himself either at the expense of his workmen or at that of the owner of the undertaking. In the present case the representative of the Minister of Railways, having examined the claim of both parties, decided on January 27, 1931, that carpenters employed in the construction of the garage in question were entitled to a rate of 85 cents per hour worked.

"The plaintiff's action is therefore maintained, and the defendant is directed to pay the plaintiff the sum of \$684 within eight days of the date of service of the present judgment, with interest from March 19, 1931, the date of summons, and costs; and the defendant failing to do so within the time-limit, payment must be made by the Canadian National Railways, the Railways deducting the same amount from any sum it may owe the contractor." *Hemond versus St. George's Construction Company, Limited*, and the *Canadian National Railways* (Quebec), 1933.

### Existing Teachers' Contracts affected by New Legislation

The Supreme Court of Canada affirmed the decision of the Appellate Division of the Supreme Court of Alberta which in turn affirmed the judgment of Mr. Justice Ewing in favour of the defendant in the case of *Steele Smith versus Board of Trustees of Acme Village School District*. This decision

was outlined in the *LABOUR GAZETTE*, June, 1932, page 737. The plaintiff, a school teacher, had entered into a contract of employment with the Board. The School Act as it then stood provided that, unless otherwise provided in the contract, either party might terminate the contract by giving thirty days' notice in writing to the other party. In 1931 the Legislature amended the School Act, one of the amendments providing that, except in the month of June, no notice shall be given by the Board without the approval of the school inspector previously given. On July 14, 1931, that is, after the new Act came into force, the Board (the defendant in this case) gave notice to the teacher (the plaintiff) that the contract of employment would be terminated at the expiration of thirty days, no approval of an inspector of such notice having been previously obtained. The teacher brought an action against the Board for wrongful dismissal.

The Supreme Court of Canada, affirming the judgments of the lower courts, held that the new section of the School Act applies to contracts with teachers made before its enactment as well as to those made subsequently.

*Steele-Smith versus Board of Trustees of Acme Village School District* (Supreme Court of Canada), 1933 *Dominion Law Reports*, vol. 1, page 545.

#### **Rights of Widow of Deceased under Fatal Accidents Act**

An employee of the Canadian Pacific Railway Company sustained serious injuries while in the employ of the company. He commenced an action against the company claiming damages under the provisions of the Fatal Accidents Act (Revised Statutes of Alberta, 1922, chapter 196), but died before the date fixed for trial. His widow then applied for an order that proceedings in this action be carried on. Later, the widow in her capacity as executrix of the will of the deceased commenced an action against the company claiming damages in respect of the accident. The defendant company raised two objections to the application of the widow to continue the original action, questioning: (1) whether the executrix could continue the action originally brought by the deceased; and (2) whether, if she could so continue it, the bringing by her of an action under the Fatal Accidents Act took away that right.

Mr. Justice Mitchell, in the Alberta Supreme Court ruled that the executrix was entitled to proceed with both actions.

*Brady versus Canadian Pacific Railway Company*, Alberta, 1933, *Western Weekly Reports*, vol. 1, page 83.

#### **Employer is Bound by Agreement with Registered Union in Quebec**

In the Superior Court, District of Montreal, action was brought by the Association of Plasterers of Montreal, a trade union incorporated under the Professional Syndicates Act of the Province of Quebec, against Edouard Tessier, a plasterer contractor, the union claiming damages for an alleged breach by the defendant of a registered contract between the two parties. A copy of the agreement had, as provided in the Act, been deposited with the Ministry of Labour; it guaranteed to the workers a closed shop, a working week of 44 hours, double pay for overtime work, and weekly payment of wages at the minimum rate of 85 cents an hour. The union alleged that on the work on which its members were employed—the construction of a Reformatory School for the City of Montreal—the contractor had failed to observe the terms of the agreement in respect to wages and overtime; and that he had paid wages ranging from 60 to 75 cents an hour, without overtime rates. The plaintiff therefor claimed \$3,167.73, the alleged amount of wages still due to the members of the union.

On the other side the defendant contended that the union should have submitted its claim to arbitration rather than to a court; that the union had not the right to claim for itself the total amount alleged to be due to its individual members; that the union had not the right to make a claim on behalf of workmen who were not in full standing as members; that the present action was not taken with the free consent of the members of the union; that the overtime work for which payment was claimed had not been ordered by the defendant; that the regular working day was one of nine and not eight hours; and that, on account of the depression, the scale of wages mentioned in the claim had been abandoned or ignored by the defendant with the knowledge of the plaintiff.

Mr. Justice Surveyer, who heard the case, dealt at length with the defendant's contentions. He quoted the section of the contract in reference to arbitration, as follows:—

"All difficulties respecting the interpretation of the present contract which have not been settled in a friendly manner by the representatives of the two contracting parties, are to be submitted for final decision to a board of arbitration whose decision shall be binding upon both parties. This board shall be composed of a representative of each of the two parties, and a third member nominated by them. Failing an agreement between the two representatives as to the appointment of the third member, the latter member shall be nominated by the Minister of Labour of the Province."

The foregoing section did not, in the opinion of the judge, constitute an actual agreement, but was merely a promise which, not being carried out, was no barrier to legal proceedings.

In regard to the defendant's plea denying the union's right of action, the judgment held that unions constituted under the Professional Syndicates Act, like the plaintiff union, could exercise before any court of justice the rights belonging to their members in regard to any matter prejudicial to the collective interest of the workers whom they represent. Under Article 3 of the Act, the judgment continued, if it is stipulated in a contract that the workers are to receive a fixed amount in wages, such workers, even though they are not parties to the contract, have a right to their share of the wages so determined, notwithstanding any subsequent renunciation by them of their claim, whether express or implicit. Parties to collective agreement who have a standing in law may take any action on behalf of their members without the necessity of establishing that any particular member has delegated his interest in the question at issue; provided however that such a member has not definitely declared his opposition to the proceedings.

On account of the representative character of the unions, it was held that they have the right to make claims for wages in their own name and on their own behalf, indemnifying their members after payment of wages has been made to the union; and the defendant in paying the union is not exposed to the risk of paying a second time.

The Act permits a registered union to sue for its members, whether or not they are in full standing—that being a question internal to the union and of no concern to the defendant. The rules of the union remain in force even though they may not be observed by the members. These rules, in the present case, include the stipulations in regard to the 8-hour day, the 40-hour week, double pay for overtime, etc. Even although the workmen should wish for changes in the terms of the contract, the employer remains under an obligation to conform with these terms. The plaintiff union could not be considered to have lightly renounced the rights it had obtained through the contract on behalf of its members, and in any event clear evidence must be forthcoming that such a renunciation has been made.

Mr. Justice Surveyer therefore found that the plaintiff's claims were well founded, and ordered the defendant to pay the sum of \$2,903.54, with interest and costs.

*Association of Plasterers of Montreal, versus Edouard Tessier (Quebec), 1933. (Text of judgment in La Vie Syndicale, March, 1933.)*

#### Responsibility for Accident to Prisoner on Prison Work

The claimant in this case was undergoing a sentence of ten days in the city prison at Halifax, N.S. He was sent, along with a gang of 12 or 15 other prisoners to clear stones from the prison land. Two of the gang were given sledge hammers to break large stones, and three others, including the prisoner in question, were given picks, bars and shovels. In the course of the work this man, of his own accord, took one of the sledge hammers which was not then in use and struck a stone, causing a chip to fly into his eye. He reported his injury to the guard at once. Remedies were applied, which were later approved by the prison doctor, but on a subsequent examination, a specialist found that the cornea had been pierced and the lens injured. The injured man brought an action against the city, claiming that he had been illegally put to work, and that while he was at work his eye had been injured through the defendant's negligence in not supplying a protective appliance for his eyes, and in not providing prompt medical aid after his eye had been injured. The action was dismissed by the trial judge, this decision being affirmed on appeal by the plaintiff to the Nova Scotia Supreme Court. It was found that the plaintiff had voluntarily assumed the risk which resulted in the accident. "He must be assumed," the judgment stated, "to have ordinary sense, and to know as every one does that particles may fly from a stone when it is struck a heavy blow. Having that knowledge and with that hazard plain and apparent, he went outside his own job to strike the blow, which caused the hazard and the injury."

It was found further that the city charter provided that prisoners "shall be kept at work." The charter enables the city to make regulations respecting "the safety of prisoners." In the present case however, there was "no failure of duty to the plaintiff," who had not been put to break stone.

Leave to appeal to the Privy Council was granted the plaintiff on January 14, 1933.

*Tilley versus Halifax (Nova Scotia) 1933, Dominion Law Reports, vol. 1, page 531.*

### Compensation for Nervous Shock resulting from Injury—Refusal to follow P.C. Judgment in Australian Case.

The plaintiff in this case bought his bread from the defendant company. At breakfast on a certain morning he found broken pieces of glass in the bread in his mouth, a slight scratch, which did not require medical treatment, being made in his throat by the glass. In addition to this physical injury the plaintiff sustained a shock as the result of his fear of serious consequences, suffering from a condition of nausea, which was renewed whenever he attempted to eat bread. The plaintiff in his action against the bread company claimed \$5,000 damages. The trial judge recognized the liability of the company, but awarded the plaintiff only \$200 damages.

The defendant company appealed from this judgment, complaining first, of the findings of fact; secondly, contending that the plaintiff had failed to prove that he had suffered any actionable injury that could be compensated in money, any damage he might have suffered being too remote from the alleged cause; and claiming finally that the damages awarded were excessive.

The Ontario Court of Appeal dismissed the appeal. The facts were found to have been as stated.

As to the second claim, namely, that the injuries sustained by the plaintiff were remote and indirect, Mr. Justice Middleton discussed certain previous decisions which dealt with liability for injuries resulting from nervous shock. One of these decisions was that of the Judicial Committee of the Privy Council in the case of the *Victorian Railways Commissioners versus Coultas* (1888), in which such liability had been denied. "No decision of recent years," His Lordship said, "has received more adverse criticism than this. In Scotland the Courts have flatly refused to follow it. In Ireland . . . Chief Baron Palles and his colleagues not only refused to follow it, but examined the underlying principle with great care, and concluded that there was no logical difference between the physical injuries which resulted from fright and the physical injuries which resulted from impact; both constituted a good cause of action."

After citing other decisions which enounced a principle contrary to that stated in the *Coultas* case, Mr. Justice Middleton continued: "The question thus resolves itself into this: Are we bound to follow the decision of the Privy Council in the Australian appeal or are we at liberty to disregard this decision and follow the series of decisions in the English and Irish Courts?"

At this point His Lordship cited the judgment of Lord Justice Greer in the case of *Fanton versus Danville* (LABOUR GAZETTE, February, 1933, page 252), which contained the following paragraph: "The decision of the Privy Council in *Toronto Power Company versus Paskwan*, seems to me inconsistent with the whole trend of English decisions, and, being a decision on the law of Canada, is not an authority which we are bound to follow." From this opinion Mr. Justice Middleton reached the conclusion that "the binding effect of the judgment of the Privy Council is limited to the Courts of the Colony from which the appeal is had. These considerations lead me to the conclusion that it is open to us to refuse to follow the decision of the Australian case which stands alone and which is so adversely criticized and which is out of harmony with the whole trend of the English cases.

"I am aware," he continued, "that I am very bold in reaching this conclusion, but even if the decision is binding upon us, the Canadian cases which I have quoted justify most careful discrimination to ascertain if it is here applicable. I do not think it is. The injury from which the plaintiff complains is the result of physical impact. It is not a case of purely nervous shock. There has been no doubt a nervous re-action flowing from the physical impact and I think the decision of the Supreme Court in *Toronto R. Co. v. Toms* shows the true ground of distinction. For example the Chief Justice at pp. 269-70 says: 'I would have thought it too clear for argument that where a person suffers physical injury, however slight, damages might also be claimed for the fright occasioned thereby. It would appear somewhat difficult to distinguish between the injury caused to the human frame by the impact and that resulting to the nervous system in consequence of the shock, the shock and the physical injury being both the result of the same accident . . . It is difficult to understand how a person should not be allowed to recover for an injury to the nervous system resulting from fright which frequently alone produces physical injuries of the most serious character.'

"In the result," Mr. Justice Middleton concluded, "whichever path may be justified, it appears to be plain that the plaintiff's illness from which he suffered was the direct consequence of the defendant's wrongdoing and that he has a right to the very modest damages allowed him by the trial Judge.

"I cannot in this case see any room for distinction between the damages which would be recoverable if the action is founded on

contract and not on tort. If it is necessary to show that the damage which has been sustained was within the reasonable contemplation of the parties I think this abundantly appears. Physical injury arising from foreign matter found in bread would certainly be contemplated.

"I would dismiss the appeal with costs."

*Negro versus Pietro's Bread Company* (Ontario) 1933, *Dominion Law Reports*, vol. 1, page 490.

#### **Employer may recover earnings received by employee from competitive business**

An engineer was employed by a mining company in Ontario. In 1928 his salary was increased on the understanding that he was to devote his entire time to the company's work, and sever his connection with other companies for whom he had been rendering service. After two years the company alleged that, contrary to this agreement, the employee had continued to serve other companies in the capacity of mining engineer, and claimed from him the return of the salary he had received subsequent to his agreement to work for the plaintiff company only. Mr. Justice Kelly awarded the plaintiff company the sum of \$3,793 against the defendant, and on appeal by the latter, this judgment was affirmed by the British Columbia Court of Appeal.

The engineer contended that, even if he had agreed to devote his entire time and attention to the interests of the plaintiff and to engage in no other business, yet provided that he did not use time that should have been devoted to the company's business, he was not liable to pay to his employer the earnings or profits received by him in respect of such work; and that, in any case, he was liable only for such damages as the plaintiff had suffered in consequence of his action, whereas no actual damages had been proved.

Dealing with this contention, Mr. Justice Masten, in the Court of Appeal, cited a decision by Mr. Justice Anglin (as he then was) in the case of *Shepherd Publishing Company versus Harkins* (1905), in which the late Chief Justice said:—

"It would be most dangerous if immunity to the servant were assured by confining the redress of the employer to the recovery by way of damages of compensation for such special loss, or even actual general loss as he could, with any reasonable degree of certainty, trace to this cause. The contrary view seems to be so opposed to sound principles that, although we do not find the proposition explicitly formulated in any judicial opinion, I think that we should not hesitate to declare it to be law that no servant can be permitted to retain as against his employer profits acquired by engaging, during his term of employment, without his master's consent, in any business which gives him an interest conflicting with his duty to that employer."

In the present case the defendant engineer was found to have had a large stake in another mining company, which "raised in him an interest which might not improbably conflict with his duty to the respondent company."

*Bennett-Pacaud Company, versus Dunlop* (Ontario), 1933, *Ontario Weekly Notes*, page 175.

The Federation of Catholic Workers of Canada sustained a severe loss in the death of their general secretary, Mr. Ferdinand Laroche, at Quebec City on March 31. The late Mr. Laroche had been connected with the labour movement all his life. In 1892 he joined the benefit society of the Boot and Shoe Workers and in 1900 took an active part in the formation of the Brotherhood of Boot and Shoe Workers of Canada, afterwards holding various positions in trust in that organization. He was elected general secretary of the Federation in 1924, and retained that position until the time of his death. His fellow workers recognized his ardent faith in labour organization and his sincere and steadfast character as a labour leader.

## NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

### Monthly Summary

**I**NDUSTRIAL employment in Canada showed a decline at the beginning of April, according to returns tabulated by the Dominion Bureau of Statistics from 7,975 employers of labour, each with a minimum of 15 employees, representing all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 698,544 persons, as compared with 706,858 in the preceding month. The employment index declined from 76.9 on March 1, to 76.0 at the beginning of April, as compared with 87.5 on April 1, 1932. On the same date in the preceding eleven years, the index numbers were as follows: 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8, and 1921, 85.1. The average number of workers employed in 1926 by the reporting firms forms the base, equal to 100, upon which these index numbers are computed.

At the beginning of April, 1933, the percentage of idleness reported to the Department of Labour by local trade unions was 25.1, compared with percentages of 24.3 at the beginning of March, 1933, and 20.4 at the beginning of April, 1932. The April percentage was based on the reports received by the Department of Labour from 1,736 labour organizations, with a combined membership of 151,307 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed a decrease in the volume of business transacted by these offices during March, 1933, when compared both with the business of the preceding month and also with that of the corresponding period a year ago, this comparison being based on the average number of placements effected daily during the months under review. Vacancies in March, 1933, numbered 22,613, applications 46,534 and placements in regular and casual employment 21,604.

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was slightly higher at \$6.83

for April as compared with \$6.67 for March. Comparative figures for earlier dates are: \$7.22 for April, 1932; \$8.86 for April, 1931; \$11.24 for April, 1930; \$11.36 for April, 1926; \$10.26 for April, 1922; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics was again considerably higher at 65.4 for April as compared with 64.4 for March. Figures for previous dates are: 68.2 for April, 1932; 73.9 for April, 1931; 91.2 for April, 1930; 94.5 for April, 1929; 101.2 for April, 1926; 98.4 for April, 1922; 164.3 for May, 1920 (the peak); and 64.0 for April, 1914.

The loss in working time caused by industrial disputes in Canada during April was less than half that recorded for March, and was only one-seventh of the corresponding loss in April last year. Five disputes were in progress at some time during April, involving 690 workers, and resulting in the loss of 4,435 working days. Corresponding figures for March, 1933, were: ten disputes, 1,840 workers, and 12,945 working days, and for April, 1932, nine disputes, 1,350 workers, and 28,517 working days.

### Industrial Disputes Investigation Act.

The Department recently received the report of the Board established in connection with the wage dispute between the Canadian National Railways and the Canadian Pacific Railway and their locomotive engineers, firemen, conductors, trainmen and telegraphers. A minority report also was received in this case. Four new applications for the establishment of Boards have been received. The texts of the reports mentioned above, and an account of recent proceedings under the Act, will be found on page 478.

### The Province of Quebec and Old Age Pensions

As was noted in the last issue (page 451) the Quebec legislature, on April 12, rejected by a vote of 47 to 10 votes, a motion that the Province should enter the Dominion system of old age pensions. The Hon. C. J. Arcand, Minister of Labour, while expressing his sym-

pathy with the purpose of the motion, quoted the opinion of the Provincial Commission on Social Insurance (LABOUR GAZETTE, February, 1933, page 161) to the effect that the federal system, being non-contributory, tended to undermine the independence and thrift of the beneficiaries. In his opinion the scheme was not adapted to the social system of Quebec, however well suited it might be to those of the other provinces in Canada. The Commission, after a thorough study of the subject here and abroad, had expressed their preference for a contributory and obligatory system. Mr. Arcand pointed out that an amendment of the British North America Act would be necessary to enable the Dominion Government to institute a contributory system of pensions, but expressed his belief that the provinces would not be willing to give up their constitutional rights. If however the Dominion Government was precluded from establishing a contributory system, such as was approved by the Commission, it would become necessary to amend the federal Old Age Pensions Act, so as to provide that provinces remaining outside the Act should obtain the quota they would receive if they participated in its provisions. In Ontario about 42,315 persons came under the act, a percentage of 1.23 per cent of population, and on this basis Quebec would have 33,353 under the Act; and if the average paid were the same as in Ontario, where it is \$18.29 per month, it would mean that Quebec would pay out \$7,747,272; and on the basis of 75 per cent, this would mean that Ottawa should pay the Province of Quebec \$5,810,454. With this sum of almost \$6,000,000, the province would be able to organize an old age pension scheme on a proper basis.

Mr. Arcand pointed out finally that the Dominion Act applied only to persons of seventy years of age, whereas the proper limit, in his opinion, should be 65 years.

#### Old Age Pension questions discussed by Connecticut Commission

Payment of pensions to persons 70 years of age and over is recommended in the recently published report of the commission appointed two years ago by the State of Connecticut to investigate the subject of

old age pensions. The Commission felt that eligibility for benefits should begin at 65 years, but because of the depression and the financial strain upon State and local governments they considered that the later age limit should be used temporarily. "It will be easy," they say, "to lower the age limit when business has recovered and time has tested the efficiency and economy of an old age relief system as compared with the present system."

The age limit of 65 years was preferred by the commission because that age "is a fairly definite dividing line between middle age and old age, since experience indicates that workers of 65 and over who lose their jobs are seldom re-employed permanently; in all recent old age relief bills submitted to State legislatures the age of eligibility has been placed at 65 years." There was also the consideration that the age classification in the U.S. Census were for the ages 65 to 74, and for 75 and over, so that the available statistical tables showed those of 65 and over, but not those of 70 and over.

The Commission would have preferred to recommend a contributory pension plan as tending to foster the individual's sense of responsibility to provide for old age, but on the other hand they found that "the machinery necessary for the execution of such a plan is necessarily very complex and the administrative bureaucracy is very costly."

#### Progress in safe mining operation

Reference is made in an article in this issue to the progress of the safety movement in Canadian mining as reported by the Explosives

Division of the Department of Mines of Canada. Similar progress is noted in an information circular (No. 6671) recently issued by the United States Bureau of Mines. "The mining industry of the United States," it is declared, "has for many years possessed the dubious distinction of having the poorest accident rate of all of the major lines of industrial endeavour in this country, and until recently there was little or nothing to show that any material improvement might be expected. However, there are now numerous trends indicating that the corner has been turned at last, and it is strongly hoped that the mining industry is likely to follow the railroads, the cement and other industries in operating with occurrence of only a reasonable amount of loss of life and limb through accidents."

Some of the measures tending to safe mining operation are enumerated as follows:—"The management, including the 'higher ups' must get sincerely and actively and personally behind the safety movement; means must be put into effect to bring about the active interest and co-operation of the mine officials as well as the workers in the avoidance of accidents (and very frequently this is decidedly difficult of achievement and bonuses or some similar inducement must be given either to workers or to officials or to both); every mine should have an actively functioning safety organization with monthly safety meetings at least and preferably with participation by workers; all persons in every mining organiza-

tion should be well trained in first aid; every mine should have a set of safety rules, preferably in a printed pamphlet, so it may be at all times available to every employee, and these rules should outline in simple language the minimum safety requirements of the management and of the State law, these rules to be revised from time to time to keep pace with changing conditions and to correct weak points; above all things every mine official should use the utmost care to follow out the safety rules at all times, as it is difficult to find anything more demoralizing in trying to bring about real safety than to have workers see safety rules violated or disregarded by officials; as previously indicated every accident whether or not injury results, should be studied to ascertain the cause and the probable method of prevention of recurrence; and at intervals data on accidents should be compiled and carefully studied in an effort to eliminate the causes of those of most frequent occurrence or of greatest seriousness in injury or in cost. One of the most fruitful aids in bringing about increased safety in mining is to keep in touch with safety performances of other mines, particularly mines in other regions, with the idea that whatever one operator can accomplish can be done by any other wideawake operator.

"To achieve maximum results in the safe operation of mines, there must be the closest co-operation by all of those engaged in the mining industry, including the mine operator and his officials, the mine workers, the State inspection force, and the forces of the United States Bureau of Mines, or others known to be striving to bring about safe operation of mining properties. Without such wholehearted co-operation, real safety in mining will be difficult to attain. It would also appear that one of the main functions of the State inspection forces in addition to that of trying to enforce the existing safety laws should be the dissemination of up-to-date data on safety in mining, even when that information is in addition to or beyond the bare requirements of State law or State regulations."

**Function of  
pension  
reserves in  
workmen's  
compensation**

*Industrial Safety News*, published by the Nova Scotia Accident Prevention Association, describes in its issue for April the use of "pension reserves" under the Workmen's Compensation Act. "The feeling still exists," it is stated, "not only in the minds of some employers, but among the general public as well, that these reserves represent a surplus which has gradually accumulated,

and increased from year to year since the Act came into effect in the year 1917 and is being used for no definite purpose. The usual questions asked in this connection is why is not this surplus or reserve used to increase the amount of compensation to those injured, or to reduce the rates of assessment on the various classes of industry in the Province.

"The Board operates under what is known as the capitalized reserve plan. In simpler language this means that the cost of each and every accident is charged to the year in which it happens and the sum of money required to settle the claim is assessed upon the employers under the Act. In the case of an accident involving the payment of compensation or pension awards over a period of years, the total sum required, and in certain individual cases this amounts to many thousands of dollars, is calculated from actuarial tables. As it would obviously not be desirable to pay an entire pension award in a lump sum to the widow or other dependants, the necessity arises of having some medium whereby these awards which are made, may be invested and payments made to dependants on a monthly basis. The trust companies are an agency of this nature and could be utilized in the administration of these pension funds, but as they would charge a commission for their services, provision was made in the Workmen's Compensation Act whereby the Board itself is permitted to act as trustee and administrator. The annual reports of the Board therefore give particulars regarding the investment of these monies merely as part of the annual statement of business transacted. The inclusion of this information undoubtedly causes some confusion in the minds of employers and the public, and it is hoped therefore that this statement may help to explain the actual purpose and function of these pension reserves."

**"Utilizing  
trade unions  
for safety."**

The importance of enlisting the co-operation of trade unions in preventing industrial accidents was emphasized by Mr. Robert J. Tallon, president of Division No. 4, Railway Employees' Department, A.F. of L., in an address before a meeting of the American Railway Association, held at Montreal on April 12. Mr. Tallon pointed to the system of union co-operative management now in effect in the Canadian National Railways as an example of the utilization of union organization for the furtherance of the industry. Under this plan regular meetings between union committees and the management are

held in all parts of the country for the discussion of matters of mutual interest, excepting grievances or subjects covered by wage agreements. Recently safety committee work has been added to the list of subjects that are within the purview of the co-operative management plan (LABOUR GAZETTE, December, 1931, page 1311); and referring to this development, Mr. Tallon says: "It must be obvious how much wider scope this gives to the safety movement." He proceeds to explain how the element of co-operation reacts in the mind of the workers, and in his words creates a "safety psychology." "Management," he points out, "is essentially concerned in establishing standard maintenance regulations, in securing output, in administering discipline, in supervision; so, to the extent that they are compelled to insist upon safety, it gives that movement the same appearance of coercion that prevails in other supervisory activities. I do not mean to suggest that management should lose sight of the necessity for safety measures, but if the men themselves can be made to realize their own responsibility much practical good would be accomplished. Our countries are founded upon democratic methods of government, and it is not compatible with the existence of trades union committees in the property to have self-appointed or company-appointed members of Safety Committees—they just do not function because they do not possess the confidence of the employees, there is always that inherent antagonism that thinks something is being 'put over'. . . . If it can become established that one of the functions of the trades unions is to prevent accidents in the plants, if such subjects are discussed where men congregate, if the message is carried and information is dispensed by one of their own members whom they have elected, there will be much more interest than generally exists at present."

The same recommendation was made by Mr. Tom Moore, President of the Trades and Labour Congress of Canada, in an address to the Ontario Annual Safety Congress, reported on another page of this issue.

#### International mine safety research

Reference has been already made in the LABOUR GAZETTE (January, 1926, page 30, etc.) to the arrangements between the mines departments of Great Britain and the United States for co-operative research in the direction of safer methods of mining. Referring to the results of this co-operation, Mr. George S. Rice, chief mining engineer of the United States Bureau of Mines, in an account

of a recent international mine safety research conference held at Buxton, England, says:—

"In 1923 negotiations were conducted between the British Safety in Mines Research Board and the United States Bureau of Mines which led to an official co-operation in mine safety research. This was consummated in the following year. The co-operation called for the interchange of research workers, of materials, of instruments for standardized testing, and of progress reports in co-operative problems. The results have been singularly successful in establishing standards of comparison and have been stimulative to the respective staffs through the interchange of personnel. Valuable research has been carried on and publications issued thereon, also unnecessary duplication of work has been avoided. One side may be so equipped through having specialists on its staff as to be able to carry on some special work of value to both sides. Further confidence in a specific finding is given when the same result is obtained by both sides who may employ different ways of approaching the problem."

The British Safety in Mines Research Board undertook two years ago a similar though more limited co-operation with the French experimental station at Montlucon. The favourable results of these two international co-operations led the board to call the international conference held July 11 to 16, 1931, at Buxton. Belgium, France, Germany, Great Britain and the United States were represented at the Buxton conference by members of the respective national research organizations, and arrangements were made subsequently for the interchange of progress reports on programs of experimental work on health and safety in coal mines undertaken by the research stations. Provision was made also for the interchange of personnel, and for the mutual loan of apparatus, etc. An important feature of the co-operation to be aimed at, if possible, will be the production of agreed reports on matters of outstanding interest, with all the directors of research as joint authors.

Mr. Rice's report of the Buxton conference, published as an "information circular" by the United States Bureau of Mines, gives an account of the various safety problems that were discussed, and of the manner in which these problems were approached by the mining authorities present at the conference.

In connection with the  
**Immigrant** Seventh Census of Canada,  
**population of** 1931, the Dominion Bureau  
**Canada** of Statistics recently published Bulletin No. 27, giving statistics of immigrant population classified by

sex, country of birth, province of residence, years of arrival in Canada, and citizenship of the foreign-born. The immigrant population resident in Canada at the date of the Census of June 1, 1931, numbered 2,307,525, of which more than 51.15 per cent was found west of the Great Lakes, about 3 per cent in the Maritime Provinces, while the Province of Quebec had 10.9 per cent and Ontario 34.9 per cent. This class of the population of Canada showed a gain of 351,800 or 17.9 per cent from 1921 to 1931, while during the same period the total increase in population from all sources was 18.08 per cent.

Of the total immigrant population reported in the 1931 Census 51.3 per cent were from the British Isles or from the sister dominions, while those of alien origin made up 48.7 per cent (1,122,695); of the latter 63.6 per cent (714,462) were from European countries, 30.6 per cent (344,574) from the United States, and 60,608 or 5.4 per cent were natives of Asiatic countries, principally China (42,037) and Japan (12,261).

At the last Census the immigrant population was 22.24 per cent of the total population (10,376,786) as against 22.25 per cent in 1921, 22.02 per cent in 1911 and 13.02 per cent in 1901.

Immigrants of alien birth constituted 5.1 per cent of the population of Canada in 1901, 10.4 per cent in 1911, 10.1 per cent in 1921 and 10.8 per cent in 1931. Of the total number of immigrants living and reported at each census, those of alien birth formed nearly 40 per cent in 1901, about 48 per cent in 1911, 45.5 per cent in 1921 and 48.2 per cent in 1931. Of the foreign born immigrants reported in the last Census 10 per cent were in Canada over 30 years, 36 per cent 20 years or over, while 73 per cent were in Canada more than 10 years.

#### Plan for land settlement in Nova Scotia

Legislation is before the Nova Scotia Legislature to widen the scope of the Nova Scotia Miner's Land Settlement Act, enacted last year (LABOUR GAZETTE, August, 1932, page 866). As implied in its title that Act provided for miners only; it carried out one of the recommendations of the Provincial Royal Commission on Coal Mining (the "Duncan" Commission) for the disposal of displaced mine workers (LABOUR GAZETTE, March, 1932, page 280). The amendment will make it possible for employees in manufacturing industries who have been resident in the province for five years and are now unemployed, to secure the financial assistance provided for in the Act. Farmers' sons not possessing land, but otherwise well qualified to develop agriculture in the prov-

ince, will also benefit, the new legislation permitting assistance to "any male person between the ages of 21 and 30 years who has had at least three years' experience in farm work or has been a member for at least two years of a Junior Farmers' Club, or has completed the Farmers' Degree Course at the Nova Scotia Agricultural College and has resided in Nova Scotia for not less than five years and is considered by the Board as qualified to successfully undertake the operation of a farm."

The Act is administered by the Nova Scotia Land Settlement Board, composed of five members, and having power to acquire and assign agricultural land under the conditions laid down in the Act.

#### Estimates of unemployment in United States

The United States Bureau of the Census recently published volume II of the Unemployment Reports, giving statistics of unemployment by occupation, period of idleness, and marital conditions and statistics of part-time employment from the Census of April, 1930, together with a report of the special census of unemployment taken in January, 1931 (volume I gave the unemployment returns from the Fifteenth Census by classes for states, counties, urban and rural areas and cities). In a supplement to the March issue of the *Journal of the American Statistical Association*, Mr. G. B. L. Arner, of the Bureau of the Census, states that probably the determining reason for taking the Census of Unemployment was the need of an actual count of the unemployed by occupation and industry which could be related to subsequent indices showing the trend of employment. "The tabulation of detailed statistics from the April, 1930, census," he says, "was hardly under way before there was an insistent demand for a supplementary enumeration to determine what changes had taken place in the months of economic recession since the April census. In response to this demand, the Census Bureau, in January, 1931, undertook a sample census covering 18 entire cities and three boroughs of New York city. The returns from this census, comprising about 2,400,000 schedule entries, were coded, the entries counted by unemployment classes for each city, and the figures given to the public on March 21, 1931, less than one month after the receipt of the last of the schedules from the local supervisors.

"A comparison of the returns of the special census with the 1930 returns from the same areas reveals very striking changes in the unemployment situation in a period of nine months. The total number in class A (i.e.,

persons out of job, able to work, and looking for a job) in the 21 areas combined was 1,930,437, as compared with 775,560 in the same areas in April, 1930. The increase, amounting to 149 per cent, was used as a basis of the estimate of 6,050,000 unemployed made by the Secretary of Commerce on March 21, 1931. The total number in class B (i.e., persons having jobs but on lay-off without pay, excluding those sick or involuntarily idle) in the special enumeration area increased in the same months from 138,562 to 367,814. This increase was almost entirely confined to those reporting periods of idleness of less than two weeks and also reporting 'days worked last week.'

Referring to the publication of volume II, Mr. Arner points out that as industrial conditions become more stable increasing importance will be given to the analysis of unemployment by occupation, industry, and period of idleness, as such data must be considered in the formulation of programs for unemployment and old age insurance, and in other sociological and economic studies.

#### **Depression revives sweat- shop conditions in U.S.A.**

An article in the *Monthly Labour Review* (Washington) for March, calls attention to a serious backward movement in working conditions in certain industries in the United States during the present depression. "Social workers and officials of State labour departments are reporting from different parts of the country the reappearance and rapid growth of conditions in industry which it was thought had been definitely abolished by law and public opinion. Illegally long hours, low pay, violation of protective labour legislation, and direct cheating of employees are among the conditions reported as appearing in certain industries in which children and young workers are employed in large numbers. No locality has a monopoly of such conditions, but naturally they are most frequently reported from the industrial States; according to one authority, however, conditions have worsened also in the beet fields of the west, an industry in which it was noted some years ago that agriculture had taken on many of the aspects of factory work. The deterioration in conditions was stressed at a conference on 'Present day child labour problems,' held in Washington, D.C., in December, 1932" (LABOUR GAZETTE, February, 1933, page 113).

"The Washington conference," the *Review* continues, "planned a program for the emergency, calling for an improvement in hour and age regulations for child workers, for a stricter control over the employment of minors in

hazardous occupations, and for mandatory minimum wage legislation for minors under 18. To make these improvements effective, it held that bureaus of women and children should be established in State labour departments, or, if they already exist, should be strengthened, and that business firms should be required to register with State labour departments to facilitate inspection. Every means should be taken to rouse public opinion, and especially efforts should be put forth to prevent serious impairment of the schools through economy measures, and to make sure that school budgets shall provide the types and amounts of education adapted to the needs of all children."

#### **CORRECTION**

On page 464 of last issue, in the first column, in the 14th line from bottom of the page, "British Columbia Court of Appeal" should read "Ontario Court of Appeal."

The Industrial Relations Committee of the Canadian Manufacturers' Association is engaged in drafting a resolution on the subject of unemployment insurance, to be submitted as a recommendation to the 62nd annual convention of the Association to be held at Toronto on June 6 and 7. This announcement was made by Mr. Alexander Goldie, of Galt, chairman of the committee, at the recent annual meeting of the Ontario Division of the Association. Mr. Goldie stated his opinion that a system whereby each employer would contribute his share in building up an unemployment reserve fund was more practicable than unemployment insurance as commonly understood.

Mrs. Mary Ellen Smith, formerly minister without portfolio in the British Columbia Cabinet, died at Vancouver on May 3. Mrs. Smith was the widow of the Hon. Ralph Smith, Minister of Finance in the Province from 1916 to 1918, succeeding him as a member for Vancouver in the latter year. She continued as a member of the Legislature until 1928, and during that time was largely instrumental in obtaining the enactment of legislation providing for minimum wages for female employees, deserted wives maintenance, equal guardianship, and Mothers' pensions. She served as Dominion Government representative at the Twelfth Session of the International Labour Conference at Geneva in 1929. The late Mrs. Smith was the first woman to hold cabinet rank in any government in the British Empire.

## GENERAL REVIEW OF THE INDUSTRIAL SITUATION

### Employment

THE employment situation at the end of April was reported by the superintendents of the Employment Service of Canada to be as follows:—

There were few requests for farm help in the Province of Nova Scotia, as spring ploughing was nearly completed and the ground ready for seeding. Logging also was quiet, although some of the small operators were still busy. Fishermen were preparing for the lobster season which was to open on May 1, when a number of men who had been unemployed were expected to find work. Mines in the New Glasgow area operated from two to five days per week, and those in Cape Breton and vicinity from two to four days. Manufacturing industries showed improvement, especially in boots and shoes, oil and engineering works, where large orders had been received. Minor repairs were the only activity in the building trades, but men were sent out on relief work, which consisted mainly of airport construction, and highway and street and sewer construction. Passenger and freight traffic was fair, also trade. Spring housecleaning was responsible for increased calls for char-workers, with a good demand also recorded for other domestic help.

Some spring ploughing was under way in New Brunswick, but no heavy demand was listed for farm help. Fish were plentiful and the lobster season, which was just opening, would provide additional employment for fishermen. Logging was quiet. Manufacturing was fair. There was little building construction in progress, but at Saint John, sewer and airport construction was still being carried on as a relief measure. Freight traffic was heavy, but passenger traffic only moderately good. Wholesale trade was slow, but retail stores reported slightly more activity. There was little change in the Women's Domestic Section, the usual requests for casual workers being in evidence.

Some improvement was shown in the farming and logging situation in the Province of Quebec, a number of log drivers having found occupation in the latter industry, but mining showed no revival of activity, except at Rouyn, where prospects for a busier season seemed somewhat brighter. No marked change was noted in manufacturing. Slightly improved conditions were reported at Hull, Sherbrooke and Three Rivers, but in Quebec City factories were running on short time, and in Montreal nearly all industries, except clothing and textiles, were quiet. Orders for building trades-

men were being received in Montreal, Hull and Three Rivers, but the demand for building labourers was not very brisk. In Montreal many workers were employed on street repairs and sewer construction. Transportation was most active at Three Rivers, the shipping of a large quantity of paper being beneficial to navigation at that point. Trade was slightly better. Numerous orders for domestic help were listed in the Women's Division, with a sufficient number of applicants available to meet all demands.

There continued to be a fair demand for farm help in Ontario, with no difficulty in obtaining experienced men to fill all orders. Logging showed greater activity, owing to preparations being made for the spring drives. In many cases former employees were being re-hired, as experienced men were necessary for this work. Mining was quiet, although prospects were good for some of the smaller properties opening up. This would provide additional employment. There was little improvement in the industrial situation, textile conditions remaining good, but iron and steel very slack. Shoe factories at London and cereal plants at Peterborough were working full time, but the latter with reduced staff. Auto concerns, except those in Toronto, were also quiet. However, in spite of lack of any very definite increase in employment in any one line, a more optimistic spirit prevailed amongst employers and unemployed applicants. No large building construction projects were in sight, but repair and alteration jobs were getting under way. Highway, airport, street and sewer work was carried on as a relief measure and placements made in the various camps as required. Rail transportation was busier and considerable activity was noted in Port Arthur and Sarnia, due to grain shipments. A steady improvement was recorded in the Women's Domestic Section, particularly at Toronto, where institutional work was more plentiful and better wages offered.

Throughout the Province of Manitoba, except in the vicinity of Brandon and Portage la Prairie, little seeding had yet been done, and no great call for farm help existed. As many of the men who were placed on the Farm Relief plan during the winter months were remaining at least for the seeding season, it was unlikely that the demand for farm help would show any further increase. Logging and mining were exceptionally quiet, also manufacturing. Little change was recorded in construction, except at Winnipeg, where alterations, repairs, and improvements to existing buildings had been started, while costs were

## MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official statistics except where noted)

(8) MacLean's Building Review.

low. There was also a good demand for replacements for the relief camps operated throughout the province. Trade, both wholesale and retail, was fairly active, with collections on current accounts fair, but slow on old outstandings. Although applicants for work continued to show gain in the Women's Domestic Section, there was also an increased demand for day workers and domestic help for positions both in the city and country.

There were additional calls for farm help in the Province of Saskatchewan as work on the land became more general. Mining, however, was very slack, and building construction had little to offer. A few men found employment on miscellaneous jobs of a casual nature, such as gardening and cleaning of yards, but more than sufficient applicants were at hand to fill all requests. The situation in the Women's Domestic Section was quiet, with some calls registered for housekeepers, but few for day workers, wages for domestic service, in some cases, being so low that applicants were unwilling to accept same.

Improved weather conditions caused an increase in the demand for farm help in the Province of Alberta, and as seeding operations advanced, it was expected more men would be required. Logging was quiet, also mining, mines in some districts only working three days per month. Manufacturing industries showed no improvement, although local industries at Medicine Hat were running full time. A few carpenters had been sent out, but building construction, on the whole, was slow, and consisted mostly of repair work and alterations. Highway relief camps received a number of men as replacements. There was no new railway construction and a gradual layoff of railway employees in the vicinity of Lethbridge. Trade was slow but somewhat better than previously, with collections fair. In Calgary and the surrounding district a more optimistic feeling prevailed, which was reflected by a stronger tone in the local oil and mining exchange, where greater activity had been evidenced than for the past eighteen months. There was a slight gain in orders in the Women's Domestic Section, with the usual difficulty experienced in finding suitable applicants.

Little call for farm help was reported in the Province of British Columbia. Logging and lumbering, however, continued to show slight improvement as men were going out to camps and sawmills. A few miners were employed, but there was little in sight to absorb the large number of mine workers who were idle, except in Usk, where an extensive program of development and mill construction work was expected to be carried out as soon as conditions would permit. Manufacturing showed

no change. There was also nothing new in the construction line, about the only work of this kind available being that afforded as relief on provincial highways, or in airport camps, or that offered by the city. Seasonal work in some districts had opened up, however, and a few old hands were being absorbed. Longshoring and shipping was comparatively quiet on all waterfronts. Retail trade was only fair. Little improvement was noted in the Women's Domestic Section, and many women were still being registered under the Government Relief plan. Wages offered for domestic service were very low, and a surplus of applicants for all classes of employment was at hand.

#### EMPLOYERS' REPORTS

Employment at the beginning of April showed a seasonal decline, which was not so large as the reduction recorded on April 1, 1932, but exceeded that indicated in the early spring of 1931. The Dominion Bureau of Statistics tabulated returns from 7,975 firms whose staffs aggregated 698,544 persons, compared with 706,858 in the preceding month. The index number (based on the 1926 average as 100) stood at 76.0, as compared with 76.9 on March 1, 1933, while on April 1 in the twelve preceding years it was as follows: 1932, 87.5; 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8 and 1921, 85.1.

All provinces except the Maritime Provinces and British Columbia reported reduced employment, the losses in Ontario being greatest. In the Maritime Provinces, there was an increase in employment; manufacturing, coal mining and construction reported improvement, while trade was rather slacker and losses were indicated in logging and transportation. In Quebec, manufacturing, transportation and construction showed heightened activity, while logging reported large seasonal contractions; mining, communications and trade were also somewhat slacker. In Ontario, there was decided seasonal shrinkage in logging, and highway construction also showed pronounced curtailment, while transportation and trade recorded increased employment. In the Prairie Provinces, the decline took place chiefly in coal mining, but construction, logging, manufacturing and retail trade also showed contractions; wholesale trade, on the other hand, reported an improvement. In British Columbia, the greatest gains were in logging, railway construction and manufacturing, while mining and shipping released help.

Employment advanced in Montreal, Quebec City, Toronto, Hamilton and Windsor and the adjacent Border Cities, while small losses

were noted in Ottawa, Winnipeg and Vancouver. In Montreal, manufacturing, transportation and highway construction recorded heightened activity, but building construction was slacker. In Quebec, construction registered a small gain, but manufacturing was duller, so that the change in the situation as a whole was slight. Toronto employers reported improvement, chiefly in manufacturing, services and retail trade, while small losses were indicated in communications, transportation and wholesale trade. In Ottawa, there was a small decline in employment, chiefly in manufacturing. In Hamilton, manufacturing and transportation were more active, while construction released employees. In Windsor and the adjacent Border Cities, there was pronounced expansion, principally in automobile plants. In Winnipeg, transportation and trade were rather quieter, while manufacturing and construction reported small gains. In Vancouver, there were declines in manufacturing, construction and transportation, while an upward trend was indicated in retail trade.

An analysis of the statistics by industrial groups shows further improvement in manufacturing, particularly in the iron and steel, leather, animal food, lumber, textile and chemical industries. On the other hand, curtailment was indicated in pulp and paper, tobacco and beverage and rubber factories. Among the non-manufacturing divisions, water transportation, railway construction and wholesale trade recorded heightened activity, while logging, mining, communications and highway construction showed curtailment.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1933.

#### TRADE UNION REPORTS

Contrary to the slight improvement in conditions manifest during February by local trade union membership, a less favourable situation obtained in March, the 1,736 labour organizations from which returns were tabulated, with 151,307 members, showing an unemployment percentage of 25.1, contrasted with 24.3 per cent in February. An adverse employment movement was also noted from March, 1932, when 20.4 per cent of the members reported were idle. Unemployment in Nova Scotia showed heavy increases from February, much inactivity being recorded by a union which had not made returns in February. The coal mines of Alberta were largely responsible for the noteworthy curtailment in employment reported from that province and in British Columbia the situation declined slightly. A higher

level of activity was shown in the remaining provinces from February, although the gains were small, ranging from 2.0 per cent in Ontario to less than 1 per cent in both New Brunswick and Quebec. Nova Scotia unions, as in the previous comparison, reported extensive employment losses from March last year, reductions of much lesser magnitude occurring in Ontario, Quebec, British Columbia, Saskatchewan and Alberta. Manitoba unions alone indicated a favourable employment tendency during the month reviewed, though the change was but fractional.

Elsewhere in this issue will be found a report in greater detail with tabular statements on unemployment among local trade unions at the close of March, 1933.

During the month of March, EMPLOYMENT 1933, references of persons to OFFICE REPORTS. employment made by the

Offices of the Employment Service of Canada numbered 23,096, while the placements effected totalled 21,604. Of the latter, the placements in regular employment were 6,882 of men and 3,351 of women, a total of 10,233. Placements in casual work were 11,371. Applications for work reported to the offices numbered 46,534, of which 34,752 were of men and 11,782 of women workers. Employers notified the Service during the month of 16,060 vacancies for men and 6,553 for women, a total of 22,613. A decrease was shown in vacancies and placements but a slight gain in applications when the above figures were compared with those of the preceding month, but all divisions showed a marked decline in comparison with the corresponding period a year ago, the records for February, 1933, showing 23,714 vacancies offered, 45,919 applications made and 22,733 placements effected, while in March, 1932, there were recorded 35,275 vacancies, 55,271 applications for work and 34,275 placements in regular and casual employment. A report in detail of the work of the offices for the month of March, 1933, and also the quarterly period, January to March, may be found elsewhere in this issue.

#### BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities in Canada during March, 1933, was \$934,555 as compared with \$907,906 in the previous month and with \$3,396,729 in March, 1932.

The value of construction awards throughout the Dominion during April, 1933, is estimated by the *MacLean Building Review* at \$8,608,700. Of this total, \$3,849,200 was for engineering purposes; \$2,473,000 was for business build-

ings; \$1,881,000 was for residential buildings, and \$405,500 was for industrial purposes. The apportionment of the contracts awarded during April, 1933, by provinces was as follows: Quebec, \$3,365,600; British Columbia, \$2,365,200; Ontario, \$2,045,100; Manitoba, \$302,800; Alberta, \$200,500; Nova Scotia, \$153,900; New Brunswick, \$130,800; Saskatchewan, \$41,800; Prince Edward Island, \$3,000.

### Production and Trade

**INDUSTRIAL PRODUCTION.** Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year are shown in the table on page 472.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, outlined industrial conditions in its April issue as follows: "The economic situation of Canada was fully maintained in March, the brightest feature being the rise in wholesale prices. The index moved up from 63.6 in the preceding month to 64.4 and the further advance in most speculative commodities during April has entirely altered the outlook for the immediate future. The index for Canadian farm products moved up from 43.0 in February to 44.7 in March and non-ferrous metals continued the advance of the preceding month. A widespread belief that a considerable advance in wholesale prices will be effected through economic and political action would facilitate a resumption of business activity in coming weeks.

The volume of business was well maintained in March despite the banking crisis in the United States. Mineral production measured by nine significant factors showed improvement in March after seasonal adjustment. Gold shipments were 274,925 ounces compared with 225,492 in February, and the movement of silver was 1,692,469 ounces compared with 997,579. Nickel exports were 5,073,000 pounds compared with 3,469,000, a moderate gain being shown after seasonal adjustment.

The index for the production of foodstuffs, based on ten factors, was 74.1 in March compared with 63.0 in February. Flour and oatmeal production showed gain after seasonal adjustment, while rolled oats was produced in lesser volume. The manufacture of sugar in the four-week period ended March 25 was 55,432,000 pounds compared with 20,347,000 in the preceding period. Hog and sheep slaughtering showed gains, while the gain in cattle slaughtering was less than normal for the season. Exports of cheese and canned salmon were greater in March than in February.

The release of raw leaf tobacco and cigars was considerably heavier, but the gain in cigarettes was less than normal for the season. The manufacture of pneumatic casings showed moderate decline in the latest month for which statistics are available. The activity of the boot and shoe factories was moderately greater, according to the most recent report.

Production of newsprint was 137,078 tons compared with 125,610 tons, the gain being slightly greater than normal for March. Wood pulp, planks and boards were exported in greater volume, though the export of shingles declined after seasonal adjustment. The index of forestry production was 60.7 compared with 59.8 in February.

The output of steel ingots was 11,212 tons compared with 12,374 in February and as blast furnaces were out of operation no pig iron was produced. Automobile production was 6,632 compared with 3,298, the gain after seasonal adjustment being nearly 67 per cent.

**Coal.**—Canadian coal output declined 32.6 per cent in March to 812,393 tons as compared with the five-year average for the month of 1,206,128 tons. Production during March consisted of 547,307 tons of bituminous coal, 38,674 tons of sub-bituminous coal, and 226,412 tons of lignite coal. The output from Alberta mines totalled 339,612 tons, a decrease of 31.3 per cent from the February production of 494,600 tons. Nova Scotia's production amounted to 258,742 tons as against 273,942 tons in the preceding month. British Columbia produced 111,852 tons in March, a 13.2 per cent falling-off from the February total of 128,927 tons. Saskatchewan's output was recorded at 70,217 tons and New Brunswick's at 31,970 tons as compared with the February production of 113,902 tons and 25,034 tons, respectively. Canada imported 497,908 tons of coal in March or 49.4 per cent below the 1928-1932 average for the month of 984,098 tons. Imports of anthracite coal declined to 135,827 tons from the February total of 175,334 tons. The March importations were made up of 107,369 tons from the United States, and 28,458 tons from Great Britain. Bituminous coal imports consisted of 354,970 tons from the United States and 7,085 tons from Great Britain. Twenty-six tons of lignite coal were shipped to Manitoba points from the United States. Exports of Canadian coal decreased 54 per cent to 22,531 tons as compared with the March 1928-1932 average of 48,971 tons. Customs' records show 13,656 tons exported through Nova Scotia and New Brunswick ports in March and 8,875 tons through Manitoba, Saskatchewan, Alberta and British Columbia ports. Canada's coal supply in March was computed at 1,287,770 tons; the average for the month during the past five years was 2,141,255 tons. During the month under re-

view coal made available for use in Canada included 135,827 tons of anthracite, 887,604 tons of bituminous, 38,674 tons of sub-bituminous and 225,665 tons of lignite.

Production of coke in Canada at 138,750 tons during March compares with an output of 128,292 tons in February and 156,108 tons in March of a year ago. Although the March figures show an increase over those of the previous month the rate of output was slightly reduced as the daily average for March, a 31-day month, amounted to 4,476 tons as against an average of 4,581 tons a day in February.

Included in the data for this month were 13,744 tons of breeze of which 3,891 tons were made in eastern ovens, 8,731 tons in Ontario and 1,122 tons in the west. Sales of breeze totalled 7,733 tons or 2,207 tons by eastern producers, 5,239 tons by Ontario and 287 tons by western ovens.

During the month 37,577 tons of Canadian coal and 153,146 tons of imported coal, or a total of 190,723 tons of bituminous coal, were carbonized in Canada to make 138,750 tons of coke. For the first quarter of 1933 the output of coke in Canada aggregated 417,392 tons as compared with 451,134 tons and 515,265 tons during the corresponding periods of 1932 and 1931, respectively.

#### EXTERNAL TRADE

A summary of Canadian trade in March, 1933, prepared by the Department of National Revenue, shows that the merchandise entering Canada for consumption amounted to \$32,850,623, as compared with \$23,514,114 in the preceding month and with \$57,437,184 in March, 1932. The chief imports in March, 1933, were: Agricultural and vegetable products, mainly foods, \$6,387,499; Fibres, textiles and textile products, \$5,424,354; Iron and its products, \$5,407,676.

The merchandise exported from Canada during March, 1933, amounted to \$36,578,834 as compared with \$26,397,528 in the preceding month and with \$39,749,307 in March, 1932. The chief exports in March, 1933, were: Agricultural and vegetable products, mainly foods, \$11,414,820; Wood, wood products and paper, \$9,335,768; Animals and animal products, \$4,426,458.

#### Strikes and Lockouts

The time loss due to industrial disputes during April was only about one-third of that recorded for the previous month, the number of workers involved showing a similar decline, the higher figures for these two items during the previous month being due to disputes involving textile and women's clothing factory workers in Quebec and Ontario in which some 1,300 workers were involved with a resulting

time loss of 8,600 working days. As compared with April, 1932, a substantial decline occurred in the number of disputes recorded and in the number of workers involved, while the time loss incurred is only about one-seventh as large as that recorded for the same month last year when strikes of coal miners in Alberta caused a time loss of approximately 20,000 working days. There were in existence during the month five disputes, involving 690 workers, resulting in a time loss of 4,435 working days, as compared with ten disputes, involving 1,840 workers and resulting in a time loss of 12,945 working days in March, 1933. In April, 1932, there were on record nine disputes, involving 1,350 workers and resulting in a time loss of 23,517 working days. At the end of the month there were two disputes in progress recorded as strikes and lockouts involving approximately 515 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off by the union.

#### Prices

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in sixty-nine cities was somewhat higher at \$6.83 for April as compared with \$6.67 for March. Figures for earlier dates are: \$7.22 for April, 1932; \$8.86 for April, 1931; \$11.24 for April, 1930; \$11.36 for April, 1926; \$10.26 for April, 1922; \$16.92 for June, 1920 (the peak); and \$7.51 for April, 1914. Of the twenty-nine items in the food budget nineteen showed advances, the most important of which occurred in the prices of sugar, mutton, fresh and salt pork, lard and butter. The prices of eggs, milk, rice and potatoes were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged \$15.74 at the beginning of April as compared with \$15.59 for March; \$17.09 for April, 1932; \$19.18 for April, 1931; \$21.53 for April, 1930; \$21.64 for April, 1926; \$20.66 for April, 1922; \$26.92 for July, 1920 (the peak); and \$14.32 for April, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926, was again considerably higher at 65.4 for April as compared with 64.4 for March. Comparative figures for previous dates are, 68.2 for April, 1932; 73.9 for April, 1931; 91.2 for April, 1930; 94.5 for April, 1929; 101.2 for April, 1926; 98.4 for April, 1922; 164.3 for May, 1920 (the peak); and 64.0 for April, 1914. In the classification according to chief component materials three of the eight main groups were higher, four were lower and one was unchanged. The

groups which advanced were: the Vegetables and Vegetable Products group, due mainly to higher prices for grains, milled products and flour; the Animals and their Products group, because of higher prices for live stock, hides, lard and fresh and cured meats, which more than offset declines in the prices of furs and eggs; and the Non-Ferrous Metals and their Products group, due to increased quotations for antimony, copper, silver, tin and solder, which more than offset somewhat lower prices for lead, zinc and imported copper wire bars. The groups which declined were: the Fibres, Textiles and Textile Products group, because of decreased prices for rope, hemp, flannelette

and rayon, which more than offset advances in the prices of raw silk, raw wool and raw cotton; the Wood, Wood Products and Paper group, mainly because of price reductions for lath, cedar lumber and sulphite pulp; the Non-Metallic Minerals and their Products group because of lower prices for anthracite coal; and the Chemicals and Allied Products group due to lower quotations for copper sulphate, tartaric acid and quinine. The Iron and its Products group was unchanged, slight declines in the prices of steel tank plates being offset by increases in the prices of automobile body plates.

### Co-operative Distribution of Milk in England

The report of the "Reorganization Commission for Milk," which have been conducting an inquiry for the British Government into the problems of milk distribution, pays the following tribute to the co-operative movement:—

"Industrial co-operative societies have played a part of increasing importance in the distribution of milk. They are indeed the largest retail distributors of milk in England and Wales, and though a part of their business has no doubt been secured by the elimination of smaller retailers, we have reason to believe that the service and the active educational work for which they are responsible have had salutary results in maintaining the consumption of liquid milk in a period of falling purchasing power, when pressure on family bud-

gets naturally tends to reduce consumption of the liquid article and to encourage the use of substitutes. The fact that this great distributive organization is in essence a consumers' movement has also assisted to keep down the margin between wholesale and retail prices and to modify the hardness of purely commercial principles in the middleman section of the industry—at any rate, in their incidence on the consumer."

According to the British Co-operative Union News Service the co-operative movement, in 1919, was responsible for only 2½ per cent of milk distributed in England and Wales. By 1931 the proportion had increased to 14 per cent. In 1929 the Co-operative Union established the National Milk Trade Association to deal with the new business.

### Women's Minimum Wage Legislation in the United States

The present standing of legislation to establish minimum wages for women and young persons is summarized in the *Survey* (New York), April 15, as follows:—

"Widespread concern over sweatshop standards of wages for women workers and young people during the depression finds expression in a growing interest in the possibilities of minimum-wage legislation. Profiting by the reasons given by the Supreme Court in declaring unconstitutional the District of Columbia law several years ago, a new measure has been drafted with the help of Felix Frankfurter of the Harvard Law School and is being sponsored by the National Consumers League and other groups in a number of states. Governor Lehman sent a special message to the New York Legislature, urging the immediate passage

of minimum-wage legislation for women and minors as a protection to industry as well as to workers. At this writing, the model bill has passed the New York Senate and is in committee in the Assembly. The same bill is pending in Pennsylvania, New Jersey, Rhode Island, New Hampshire, Texas and Arizona.

"In Utah, a longer but perhaps more certain route to the same end is under consideration. There the House has passed a resolution amending the state constitution to permit the legislature 'by appropriate legislation to provide for a minimum wage for women and minors.' If it is accepted by the Senate, the amendment must be ratified by popular vote, when the way would be cleared for a state minimum-wage law."

## RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

FOUR applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour recently as follows:—

On April 13 an application was received from longshoremen employed by various shipping companies trading to the port of Montreal, P.Q. The employees concerned in the dispute, numbering 2,859, are members of the Syndicated Longshoremen of the port of Montreal. A wage decrease of approximately 10 per cent was stated to be the cause of the dispute. A Board was established by the Minister of Labour on April 18, composed as follows: the Honourable Mr. Justice Louis Cousineau, Aylmer, P.Q., chairman, appointed by the Minister in the absence of a joint recommendation from the other members, Messrs. F. Curzon Dobell and John A. Sullivan, M.P., nominated by the companies and employees respectively.

Two applications under the provisions of the Industrial Disputes Investigation Act were received in the Department of Labour on April 28 from the Winnipeg Electric Company, (1) relating to a dispute with its motormen, conductors and busmen, and employees in its

mechanical and track departments, numbering approximately 950 in all; (2) relating to a dispute with 40 employees in its gas production department. A Board of Conciliation and Investigation was established by the Minister of Labour on May 1 to deal with the disputes as set forth in the two applications, which arose in connection with the company's proposal to reduce wages and effect certain changes in working conditions. Members of the Board have been appointed as follows: on the company's recommendation, Mr. Ernest T. Leech, K.C., Winnipeg; on the employees' recommendation, Mr. Allan Meikle, Winnipeg. Messrs. Leech and Meikle will confer looking to a joint recommendation for third member, who will be chairman.

The Hull Electric Company submitted an application on May 6 for the establishment of a Board of Conciliation and Investigation to deal with a dispute which had arisen with its operating and maintenance employees concerning a reduction in wages and an adjustment in working hours and conditions proposed by the company. The matter of the application had been taken up with the employees concerned at the time of going to press.

### **Report of Board in Dispute between the Canadian National Railways and Canadian Pacific Railway (subsidiary railways: Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway) and their locomotive engineers, firemen, conductors, trainmen and telegraphers.**

A Board of Conciliation and Investigation established in March to deal with a wages dispute between the Canadian National Railways and Canadian Pacific Railway (subsidiary railways: Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway) on the one hand, and certain of their employees on the other hand, being locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers, presented its report to the Minister of Labour at the close of April. The personnel of the Board was as follows:—the Honourable Mr. Justice G. F. Gibsons, Quebec, P.Q., appointed by the Minister of Labour in the absence of a joint recommendation from the other members of the Board, Messrs. Geo. C. McDonald, C.A.,

Montreal, and W. F. O'Connor, K.C., Toronto, nominees of the company and employees, respectively. The report of the Board was signed by the chairman and Mr. McDonald. Mr. O'Connor submitted a minority report.

Following receipt by the parties concerned of copies of the Board's report, the railways advised the Department that they were prepared to accept the Board's recommendations and that, pending negotiations with the representatives of the classes of employees mentioned for the revision of agreements in accordance with the report of the Board, the railways were arranging to put the recommendations into effect from May 1, 1933.

The texts of the majority and minority reports are given below.

## Report of Board

OTTAWA, April 25, 1933.

To the Honourable the Minister of Labour,  
Ottawa, Ont.

SIR,—Under the Industrial Disputes Investigation Act R.S.C., Chap. 112, in the matter of differences between the Canadian National Railways and Canadian Pacific Railway (Subsidiary Railways: Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railway, and Esquimalt and Nanaimo Ry.) on the one hand, and certain of their employees on the other hand, being Locomotive Engineers, Locomotive Firemen, Conductors, Trainmen and Telegraphers.

The Board appointed by you on March 17, 1933, to deal with the above matter, in accordance with the Act have now the honour to advise you that the Board met on March 23 and organized. On that date the railways declared readiness to proceed at any time; the employees asked that April 4 be fixed for the commencement of hearings, and that application was acceded to. On April 4, the Board met and heard the railways' case from Messrs. A. J. Hills, on behalf of the Canadian National Railways, and George Hodge, on behalf of the Canadian Pacific Railway. After the railways' case had been presented, Senator Murdock, on behalf of the employees, asked adjournment to April 10, to enable them to prepare their answer; the adjournment was acceded to. Between the 4th and 10th, further adjournment was agreed to by the parties to the 18th instant.

Hearings were resumed on the 18th instant and continued through the 18th, 19th, 20th and 21st.

Throughout the Board used its best endeavours to conciliate and induce the parties to find a solution themselves. Up to the last, both parties declared to the Board that there was no possibility of a consensual compromise, so, in compliance with Section 26 of the Act, the Board now begs to report. This report will be signed by two members only, by the Chairman, and by Mr. McDonald representing the railways. Mr. O'Connor will submit separately the recommendation he would approve.

### REPORT

The reference to this Board is for the conciliation and investigation of a wage proposal made by the railway companies. The proposal is to diminish as from March 3, 1933, the rates of pay of these five classes of employees. The diminution proposed is one of 20 per cent from the "basic" rates. The "basic" rates are the

rates agreed upon by the parties in 1927 and 1929. Under the proposal they are to remain the basic rates. The diminution is meant to be effective only while the present depression lasts.

The above basic rates were effective from the dates named, and in the autumn of 1931 the railway companies gave notice of intention or desire to permanently reduce them as the basic rates by 10 per cent. The employees refused and a Board was named. The Board, on November 30, 1931, reported favourably to the reduction proposed. The men refused to accept the award, and then the parties negotiated between themselves and reached an agreement on February 4, 1932.

The purport of this agreement was (a) that the basic rates should remain the basic rates, (b) that from December 1, 1931, to January 31, 1933, a deduction of 10 per cent be made from each pay cheque, and (c) if the companies find themselves unable to discontinue the deductions they would give notice, etc., this to be dealt with later.

Under the provision (c) the railways, about December 1, 1932, gave notice that they would be unable after January 31, 1933, to discontinue the 10 per cent deduction, that they even foresaw that they would be obliged to propose further deductions for the period after January 31, 1933. Later, the companies proposed that from February 1, 1933, the deduction would be increased to 20 per cent from the basic rates, namely the 10 per cent agreed to on February 4, 1932, and an additional 10 per cent. The employees refused agreement, but expressed willingness that the 10 per cent deduction continue for the present.

The railways declared their inability to accept the limit as 10 per cent, they insisted upon the necessity of 20 per cent and applied for a Board. It is their final proposal of a deduction of twenty per cent as from March 3, 1933, which is referred to us.

Our first duty is to endeavour to bring about a settlement of the dispute, and, failing that, it is our duty to ascertain "the facts and circumstances pertinent to the matters referred to in the Application and in the Reply," and recommend a mode of settlement "according to the merits and substantial justice of the case."

The contentions of the parties, and the different reasons urged in their behalf, must be dealt with in some detail, but it may be said that the general lines are these:—

The companies contend for the twenty per cent deduction principally (1) because of the precipitate decline of railway traffic in the last three years, which has brought the railways to

the financial distress in which they find themselves; (2) because of the general economic conditions, the acute shrinkage of all values including that of labour, evidenced also by the large numbers of unemployed; (3) because the present diminished cost of all commodities make it that the lowered rate of pay will still leave the employees in position to support the diminution of pay because all articles entering into the cost of living are lower in price.

The employees contend that the continuance of the present 10 per cent deduction is sufficient contribution from them towards the situation which the companies invoke: (1) because, so the employees allege, prior to 1921 Canadian Railway labour received a rate of pay equal to or in excess of the rates prevailing on the U.S. railways, that Canadian Railway labour's right to such rates was recognized and enacted by the Order in Council P.C. 1768 of 16th July, 1918—the Order in Council which made the McDoo Award operative in Canada—and the employees say that that is still their right even though—which they say is a fact—between 1921 and 1927, through goodwill and national consideration, they did not on all occasions insist upon being given the increases that American Railway labour received, and they say that their present basic rates are below the American basic rates; (2) because American Railway labour is, by agreement, under a 10 per cent diminution from its basic rates, and Canadian Railway labour should not be asked to accept a greater percentage of cut than American Railway labour; the employees add that they had already expressed willingness to accept continuance of 10 per cent deduction which has been in effect since 1st December, 1931; (3) because the Federal salary cut has been 10 per cent only, and since the 12,000 C.N. railway employees are to all intents and purposes government employees, they should not be asked to accept a 20 per cent deduction when other government employees are under one of only 10 per cent.

Each side has furnished the Board with full statements and supporting documents, all of which we have considered carefully.

There are several matters which we think we should mention before coming to the main issue.

ONE is as to what is the exact purport of the Companies' proposal—is it to cancel the basic rates of 1927 and 1929, and replace them by new basic rates? Or is it to have the basic rates of 1927 and 1929 remain the basic rates, but from 3rd March, 1933, to allow deductions from pay cheques and this owing to and during the continuance of the present lifeless condition of the railroad industry? In

answer to this it is right to say that if reference goes back to 1931, circumstances are met with which would lend colour to the view that the purpose of the companies may have been the former of the above alternatives. Up to almost the end of the hearings the employees were of the belief that that was what the companies were seeking. But if reference is confined to the notices and correspondence having to do with the appointment of the present Board, we think it clear that the latter alternative is the true construction of the companies' application. If there were any doubt it is removed by the unqualified admission of the Companies that what is sought is temporary diminution of the rates, the basic rates to continue to be basic.

Two. The meaning and effect to be given to paragraph 1-c of the agreement of February 4, 1932, is a matter of controversy between the parties. There may be doubt as to whether this controversy is included in the matters referred to us; on the other hand, all are so closely connected together, and it has been so fully discussed by both interests, that it seems to be expected of us that we say what our view is. The paragraph begins:

"(c) This agreement shall be effective from December 1, 1931, to January 31, 1933." the meaning of that sentence is quite clear. The paragraph continues:

"but if on or after December 1, 1932, business conditions have not so improved as to enable the railways to terminate the agreement at January 31, 1933, notice to that effect will be given to the representatives of the employees."

The controversy is as to the meaning to be given to this sentence. The employees contend that it does not in any way vary the preceding sentence, which has indicated that deductions are to be made only up to January 31, 1933. According to the employees the right to make the deductions terminated automatically on the date named. The railway companies contend the contrary. The view which we think is right is that the situation between the parties which the writing was to settle, will help to indicate the meaning they intended the words to have. The situation was: that the Railways had proposed a reduced basic rate of pay on account of the prostrate condition of business; a Board had, on that account, recommended that the basic rates be reduced; the employees refused concurrence; then the parties negotiated direct with the result that this document of February 4, 1932, settled the matter between them. By it they agreed: "To give effect in principle to the recommendation of the Board."

Now part of the recommendation of the Board was this:

"This principle has been accepted and acted upon in the past, and it is our earnest hope, and we believe it to be just, that if this decrease is now accepted, the restoration to the employees, as soon as conditions sufficiently improve, of any reductions which they have accepted, should have the sympathetic attention of the railways, and we understand from what the railways, themselves, have said at the enquiry, that it is their full intention to do so."

It is quite clear, we think, that on February 4, 1932, the intention and purpose of the parties was that the 10 per cent deductions should continue so long as business conditions remained so bad as to justify it. It is true to say that automatic termination on January 31 is not stipulated in the contract, and the railways tell us that the employees proposed that termination be made automatic on a fixed date, as had been done in the agreement made in the U.S.A. on January 31, 1932, but that they, the Railways, refused. Thereupon (1-c) was agreed to by both. Paragraph 1-c concludes:

"upon which the parties to this agreement will confer further and agree to make every reasonable effort to bring the matter to a conclusion before the 31st of January, 1933."

Is there anything in these words to indicate either that the deductions were or were not to cease automatically on 31st January? In our view—we are supposing we are expected to give it—if the intention had been to terminate automatically, there would have been no occasion to mention the notice by the railways "on or after December 1," nor to refer to efforts which would follow that notice and the purpose of which would be "to bring the matter to a conclusion before the 31st of January, 1933."

In our view the "matter to be brought to a conclusion" was for the settlement of two questions, first, was the companies' notice justified by the condition of business at the time, and, second, if so, to what extent, the whole 10%, or 5%, or what?

Here is the employees' contention as to 1-c, (Transcript at page 129):

"The Employees' understanding of what occurred at that time is as follows. A definite agreement was entered into by the Railways that the basic rates of pay would be restored as of February 1, 1933, unless that was found to be impossible on account of business or economic conditions found at the time in effect, in which case the Railways requested, and were given in the agreement

entered into, sixty days from December 1, 1932, to the end of January, 1933, to notify the organizations of their further desires in the matter, and the railways obligated themselves to undertake to *reach an agreement with the organizations within the sixty days before first of February, 1933.*"

We are unable to admit that construction to be valid.

For the reasons above we think that the deductions did not terminate automatically, and were not intended to terminate on January 31, if business conditions remained bad. We think that notices given by the railway companies entitled them to continue the deductions and to the full ten per cent, provided they were able to prove that the business conditions at and after January 31, were not less disadvantageous than these were on February 4, 1932. We think that it would have been competent to the employees, following the companies' notice, to show that the 10% was excessive, and ask it be reduced to the proper figure. We think that it appears very clearly and very definitely that the business situation of these railways was considerably worse at and after January 31, 1933, than it was on February 4, 1932; therefore the deductions made after the date January 31, 1933, were consequent upon and authorized by the agreement of February 4, 1932.

THREE. On behalf of the employees it is urged to us that the grounds upon which the railways have based their application for temporary diminution of the wage rate (stagnation of the industry, fall of the price of commodities, diminution in the cost of living) are not pertinent to the present inquiry. We think all these considerations are admissible, not only because of their inherent significance, but also because all are alleged to be coincident and cumulative in effect. Taken separately they may be of greater or less weight according to circumstances. We have found many occasions when fluctuation in the cost of living was invoked and properly so, as a reason for an increase in wages. In proper circumstances there is no reason why it may not serve a converse purpose. The contention above is correlate with another, namely, that the sole question should be "do the men earn their pay"—of which more later.

FOUR. If the employees were to-day to concur in the agreement of February 4, 1932, especially if they were to concur "in principle," they would be open to the argument that if toward the situation as it was in November, 1931, the share they should bear was a deduction of 10%, a worse situation in February, 1933, would call for a similar and

greater deduction from them. The employees here represented dissociate themselves from the principle of the agreement of February 4, 1932, and repel the argument. Ourselves, we think the situation between the parties in 1931 was, and that between them now is, not a question of law or of legal right, but one of immediate co-operation and of settled interdependence of interest.

The considerations which the railway companies urge are these:

#### *Financial Situation of the Railways*

On this reference, necessarily, the companies' finances are reviewed only in outline, but, even an outline is sufficient to make clear the completely reversed position in which these railways find themselves as compared with three years ago. In any cases in which we have bulked together the figures of both railways, the bulking does not affect the true portrayal of the facts.

The wage rates which it is proposed to temporarily cut by 20% were negotiated and fixed by agreements in the years 1927 and 1929. It is a fact,—it must have some bearing upon the level of the rates then agreed to, that the years 1927, 1928, 1929 were years of very great railway traffic.

In those three years "the gross operating revenues" of the two roads taken together averaged \$472,000,000 per annum; in 1930 a decline set in, sharply, and the total for that year was \$402,000,000, a decrease of \$70,000,000; in 1931 the decline continued, more sharply still, to \$319,000,000, a further decrease of \$83,000,000; and in 1932 the decline continued to \$263,500,000 which was a still further decrease of \$55,500,000. Thus a decrease in gross operating revenues of \$208,000,000 between 1929 and 1932. The decrease still continues in 1933, there being a decrease of over \$9,000,000 for the two months of January and February. It is doubtful if any railway man in 1927 or 1929 could have conceived such a decline in traffic to be possible.

For the three years 1927, 1928, and 1929 for the two railways taken together, and including the C.N. Ry. lines in the U.S.A., the net railway operating income was \$249,000,000, an average of \$83,000,000 per annum. In 1930 this net railway operating income for the two railways together became \$53,750,000, a decrease of \$29,250,000; in 1931 it became \$19,000,000—a further decrease of \$34,750,000. In 1932 it became \$15,000,000 a still further decrease of \$4,000,000. Thus net railway operating income declined from \$83,000,000 to \$15,000,000 in three years, and it is still declining. It has declined over \$4,000,000 for the two months of January and February, 1933, as

compared with the two corresponding months of 1932.

In the three years 1927, 1928, 1929, the Canadian Pacific Railway paid on an average each year: fixed charges \$17,000,000, dividends \$33,000,000, and during the period had an average annual surplus of \$8,750,000, these items totalling \$58,750,000. In 1930 the company paid fixed charges \$20,700,000, dividends \$38,250,000, and exhibited a surplus of \$133,000. These totalling \$59,100,000, but \$6,500,000 of these expenditures were made from reserves which had been accumulated by the Allan Line, so, instead of a surplus of \$133,000, the railway in that year really had a deficit of \$6,370,000. In 1931 the company paid: fixed charges \$22,800,000, dividends \$22,000,000, and showed a deficit of \$8,300,000, thus in this year the shareholders received less in dividends by \$16,000,000 and the company suffered a deficit of \$8,300,000. In 1932 the company paid: fixed charges \$24,370,000, dividends \$2,750,000, and these being paid, suffered a deficit on the year of \$2,500,000. Thus in 1932 shareholders received less in dividends than customary, by \$36,000,000 and the company met with a loss on the year of \$2,500,000, disadvantages totalling \$38,500,000. To recapitulate, during these three years 1930 to 1932, shareholders missed receiving dividends to the amount of \$52,000,000, and the company accumulated deficits of \$17,000,000—the disadvantages totalling \$69,000,000 for the three years—an average of \$23,000,000 per year.

The Canadian National Railways for the years 1927, 1928, 1929 had an average annual deficit on income account of \$37,500,000. The deficit on income account in 1930 was \$68,280,000, in 1931, it was \$93,500,000, in 1932 it was \$96,500,000. All these sums were paid by the Federal Government from current taxation.

We think that the figures just given exhibit the finances of the railways to be in a situation which justifies grave anxiety; also, unless further economies can be effected, some drastic remedy may become imperative.

As to the general economic situation little need be said, for it is a matter of common knowledge. Values have declined to distress levels, unemployment, total or partial, is more widespread than it ever was in living memory; and, with practically no exceptions, individuals' means of living whether income from investments, or earnings, manual, clerical, professional, or other, are lower than they were three years ago by large percentages—fifty per cent being not uncommon.

We think it is a matter of common knowledge, not only that the cost of living of all standards of living has declined appreciably; but also that the great majority of people in this country, from necessity forced

upon them by the general economic situation, have lowered, and lowered considerably, the standards which they had been able to adopt for themselves in those years 1927 to 1929.

The bearing that the general economic situation has upon the proposed 20 per cent cut is that railway labour, like all labour, manual, professional or clerical, is a commodity which fluctuates in value; when the values of commodities generally, including other labour, have fallen in terms of money, it is but reasonable to contend that railway labour also should be entitled to less remuneration in terms of money.

The railways urge that these universal declines in value have affected as of course the prices of foods which enter into the cost of living. And they point as an example to the Cost of Living tables for the different dates as published in the LABOUR GAZETTE. The employees object that these tables are inapplicable, because they have reference to a standard of living lower than their own. We agree that the standard of living exemplified in those tables is not that of these employees. It is a fact, though, that the tables indicate the aggregate retail selling price of the same prepared lists of foodstuffs, on the different dates. Such figures we think may be considered as reliable guides as to fluctuations of costs of the articles on that list. We think also that the percentages deducible from the tables are of help as guides to indicate by what percentages costs have varied; not only in the standard of living to which the tables refer, but also other standards of living, even to standards appreciably higher than those dealt with in the tables.

We feel obliged to advert to the topic Rates of Pay in two aspects—for both were given much development before us—the rates of pay as such, and the total annual earnings they have brought in to the worker.

First, as to the rates as such. The pay schedules are much more composite and involved than need be referred to in this report, but reference must be made at least to the five classes and the categories of which each class is composed; thus:

Locomotive engineers may be 1, passenger, or 2, freight, or 3, way freight, or 4, yard;

Firemen may be any of those four categories, or may be: 5, hostlers;

Conductors may be: 1, passenger, or 2, freight, or 3, way freight;

Trainmen may be: 1, passenger trainmen, or 2, passenger baggagemen, or 3, freight trainmen, or 4, way freight trainmen: and in the class trainmen are also: 5, yard foremen, 6, yardmen, and 7, switch tenders;

In the class Telegraphers, are:

1, operators, 2, agents, 3, relieving agents, 4, linemen, 5, despatcher, first year, and 6, despatchers third year.

For each of these twenty-five categories there is a separate wage rate,—quite frequently with differences of rates for the same categories between Eastern and Western lines in the Canadian Pacific System. The Canadian National rates, we are informed, are substantially the same as those of the Canadian Pacific.

Of the five classes concerned in this reference the Telegraphers are paid on a monthly salary basis, the others: Engineers, Firemen, Conductors, Trainmen are paid on a combined hour and mileage basis, except on yard work when the pay is by the hour.

All categories of telegraphers are by the month, the month consists of 25½ working days of 8 hours each, so it consists of 204 hours.

The rate of pay of the Engineers, Firemen, Conductors, and Trainmen is expressed as being at so much "per minimum day of 100 miles," or "per minimum day of 150 miles." What is meant by this is that so soon as the mileage (100 miles for freight traffic, 150 miles for passenger traffic) has been made inside of 8 hours, that mileage counts for a full day's pay: mileage in excess of the 100 or 150 made within the 8 hours is paid extra at the same rate: if the mileage is not made, then 8 hours duty constitutes a day for purposes of pay. The day of these four classes is referred to as an 8 hour day, but that appellation is really a misnomer, for the day of these employees consists of mileage, not of working hours. It is only when the minimum mileage has not been done in less time than the 8 hours, that the employee is obliged to give 8 hours in time. Nevertheless it may be rightly called an eight hour day in this sense that the employee is not obliged to remain on duty for more than eight hours, and if he is kept beyond that he is to be paid for the excess at the overtime rate.

These employees may make one and a half or two days pay in eight hours—if the mileage is done; (the units being 150 miles for passenger traffic, 100 miles for freight).

There is also this rule: that so soon as any of these employees is called to duty at all, he is entitled to a full "day's" pay;—he may not be called to duty for less.

On some of the tables before us, there is a rate of pay indicated as being the rate that the worker in that category earns "per hour," the calculation being made by taking—prior to the change from a 10 hour day to an 8 hour day one-tenth—and for the later dates,

one-eighth of the "daily rate." To express in figures of so much per hour the rates of pay prevailing on different dates, is a very convenient and obvious device for visualizing the fluctuations of those rates; on account of that advantage, we will a little further on, utilize the device in making the comparisons. But we must caution that for four of the classes such figures are subject to very considerable modification by the operation of the mileage rule. In the case of Telegraphers, the rate "per hour" so obtained would be correct, because the Telegrapher's "day" consists of 8 actual hours of duty. But in the case of Engineers, Firemen, Conductors, and Trainmen, except on yard duty, it would indicate only their guaranteed minimum per hour. It would not indicate that an hour in time had been given to earn that amount of money, unless—which is not the case—it were a fact that these latter employees were obliged to remain on duty always for the eight hours, and were not permitted in the eight hours to earn in excess of the mileage constituting a "day" namely 100 or 150 miles. So the "per hour" earnings shown with reference to these four classes are very much less than what they may earn, and so far as we can see from all what is before us, considerably less than what they do earn per hour of time actually on duty.

Next to be mentioned is that the work is not allotted by the employers, nor is it allotted in rotation to all the men of these classes, whose names appear upon the lists. Not all have similar opportunities of employment, for we are told there are seniority rules, self-imposed by the men themselves without participation by the companies, and carried out under the surveillance of the Brotherhoods' officers.

The seniority rules are too voluminous to be referred to more than in a summary way, but the feature of them is that seniors are entitled to employment by preference over their juniors. In general, the senior on the list may always exclude the junior from work; but the rule is tempered to this extent that there are fixed monthly maxima, and, after he has performed his maximum the senior may not, during the remainder of that month, exclude the junior. A consequence of this rule is that when work becomes scarce, the junior suffers. Seniors work up to their monthly maxima and those junior to them have employment only if there is any left over.

In addition to this seniority rule there is a demoting-promoting rule. By this latter a locomotive engineer is deemed to be a promoted fireman, which in fact he is, and when work is scarce, unemployed engineers are en-

titled to be demoted temporarily and to become firemen; they are entitled to be put at the top of the list as the most senior of the firemen with right of preference to employment as firemen over all juniors to them. In the same way conductors may become demoted to brakemen, or trainmen. True that the monthly maxima apply to these demoted men, but in slack times with both rules operating, it becomes extremely discriminatory for the original juniors in any of the classes.

We have felt obliged to give attention to these rules and their operation because a very considerable portion of the employees' discussion at the hearings was with reference to them.

The relation between these railway companies and these employees has this somewhat striking peculiarity: that there is no thought whatever of either quitting the other. Neither seems to have given any consideration to that alternative. Both contemplate continuance of everything as it is, but they cannot agree upon the rates of pay. In the employment contract between them either wishing a change in conditions is held to give a thirty-day notice to the other, as has been done here. Wage rates were agreed between them in 1927 and 1929, and now the companies seek to have the rates temporarily lowered. An integral part of the companies' case is that the rate they propose, considering the lowered cost of all commodities is relatively as high as at any previous time going back as far as 1914, that in fact as compared with the price of commodities entering into the cost of living it is relatively much higher than ever before.

For proof of this the companies make comparisons of wage rates and costs on different dates, going back to 1914, a pre-war date.

Wage rates and costs prevailing in 1914 are perhaps too remote for them to have direct bearing upon what should be effective rates to-day; still, with the fluctuations occurring since, they may inform upon the whole situation, and it is true enough that they form part of the perspective.

All the classes of employment included in the present reference existed in 1914 and all had rates of pay. From time to time these rates were revised; now all are much higher than they were in 1914. It is probably permissible to say that: as they were in 1914 these rates bore an intended proportion to each other (based probably upon the accepted importance of each employment), but it is a fact that in the different revisions since then, some employments were given much higher rates of increase than others—probably due to changing current conditions—and now after the last revision (1927 for the engineers, fire-

men and telegraphers, 1929 for the conductors and trainmen) though all the rates were notably higher than in 1914, the percentage of increase was not uniform among them all.

Thus in the case of:

*Locomotive engineers:* 1914 to 1927, the increase (including change in 1917 from a ten-hour to an eight-hour day) was (according to class of locomotive) from a minimum of 42·9 cents per hour in 1914 to a minimum of 79 cents in 1927, 49·6 cents to 92·5 cents; 53·9 cents to 99 cents, 42·9 cents to 86 cents (only slight variances between Eastern and Western Lines).

*Locomotive firemen:* from 1914 to 1927—(change to an eight-hour day in 1917) there was an increase according to class of locomotives from a minimum of 33·75 cents per hour in 1914 to a minimum of 61 cents per hour in 1927, 32 cents to 69·5 cents, 33·5 cents to 74·5 cents, 26 cents to 67·5 cents, 26·5 cents to 68·75 cents; rates the same for Eastern and Western Lines.

*Conductors:* from 1914 to 1929 (change to an eight-hour day 1917 for Eastern Lines, 1918 for Western Lines), there was according to the classification of the train, passenger, freight or way freight, an increase from a minimum of 45 cents per hour in 1914 to a minimum of 88·5 cents per hour in 1929, 40 cents to 78·125 cents, 45 cents to 84·625 cents, with small variances between Eastern and Western Lines.

*Trainmen:* Similarly to conductors, an increase from a minimum of 29·5 cents per hour in 1914 to a minimum of 59·625 cents per hour in 1929, 27·5 cents to 61·75 cents, 26·7 cents to 61·375 cents, 30 cents to 66·375 cents, with small variances between Eastern and Western Lines.

*Yard Foremen, Yardmen and Switch Tenders:* Actual pay for actual time, increases from 1914 to 1929 including change to eight-hour day in 1917: 38 cents per hour to 84·25 cents per hour, 35 cents to 78·125 cents, small variances between Eastern and Western Lines.

*Telegraphers:* Actual pay for actual time, increases from 1914 to 1929, including change to eight-hour day in 1918.

*Eastern Lines:* According to category: from 23 cents per hour in 1914 to 60 cents in 1929, 25·5 cents to 63·25 cents, 28·75 cents to 68·25 cents, 28·75 cents to 68·75 cents, 59·5 cents to \$1·0825, 67·75 cents to \$1·2375.

*Western Lines.* According to category: from 28·25 cents to 65·5 cents, 31 cents to 67·75 cents, 31 cents to 72·75 cents, 68 cents to \$1·1075, 76 cents to \$1·25.

It is sufficient to read through this list to see that for all these employments the rates

of wages were doubled, and more than doubled, between 1914 and the wage agreements negotiated in 1927 to 1929. The advance was reached by steps, some few recessions intervened. A Conciliation Board to deal with a demanded increase of railway pay was actually functioning when the outbreak of war occurred, and it then ceased acting. Pressure for increase of railway wages was renewed however, and in 1917 this was met (perhaps only partially) by a change from a ten-hour day to an eight-hour day, the "daily rate" of pay remaining the same. This was operative 1st April, 1917, for engineers, conductors, trainmen and yardmen Eastern Lines, 1st July for firemen Eastern Lines, 1st August for engineers and firemen Western Lines, 1st October for telegraphers Eastern and Western Lines, and 1st January, 1918, for conductors, trainmen and yardmen Western Lines.

So far as it affected the employers, the adoption of the eight-hour day increased the wage rate by 25 per cent, perhaps in effect by more, because time became overtime after eight hours instead of after ten hours. In figures it increased the railways' wage bill in overtime by some \$9,250,000. Labour was not satisfied with these increases and from early in 1918 continued to press for more.

But there then intervened a new, and as it proved to be, a peremptory factor to affect this Canadian railway wage question. The United States had become a belligerent. As a war measure the United States Government had taken over the complete control of all railways, and was to administer and operate them for government account. A prominent political supporter of the then administration, Mr. W. G. McAdoo, became Director General of Railway Administration.

From that moment the United States railways ceased to be industrial enterprises; the rules of business no longer applied to their operation. The Director General of Railway Administration listened to the demands made upon him, he appointed a Railway Wage Commission (the Lane Commission) and on its report, he promulgated a scale of wages for the railroads under his control. This is very generally known as the McAdoo Award. The details of this award need not be referred to, but it is permissible to say that the wage increases granted were enormous,—some \$850,000,000 added to the annual cost of those railways. However, as the totality of these wages was to be paid by the United States Government, as war expenditure, the railway companies had not at that time any special grounds on which to found objections.

All such measures taken by the U.S. government and its officers are matters of American

Governmental administration, this Board may not in any way comment upon them, but the repercussion set up in Canada by reason of them forms an antecedent part of the situation which is now before this Board.

So soon as the McAdoo Award was promulgated in the U.S., Canadian Railway Labour pressed for the adoption of the same rates in Canada. The reasons given included the similarity of the work, and the approximation of economic conditions. If there was similarity in the situations of the employees, in the two countries, there was certainly no similarity between the employers. In the United States, the wages were a war expenditure of the Federal Government just entering the War, in Canada they were (except in the case of the Intercolonial) costs of private industrial enterprises. To impose upon the Canadian Railways the rates of wages in the McAdoo Award, meant to increase the railway wage bill by some \$57,000,000 per annum. (Of all the above it was estimated the Government railways' share would be \$5,600,000).

The railways were absolutely unable to find the money wherewith to meet any such increases, the details of their finances are set out in the letter of Sir Henry Drayton attached to the Order in Council P.C. 1768 of 16th July, 1918.

Canadian Railway labour had demanded the immediate adoption of the McAdoo rates of pay, under the alternative of an immediate general strike. The railways had applied to Sir Henry Drayton, and on 15th July, 1918, he wrote that letter, these passages occurring in it:

"The larger railway companies have approached me in connection with the threatened strike of railway employees. . . .

"The management of the railways . . . are extremely desirous that no strike should occur, and that there be no interruption to the country's war effort. . . .

"With everything pointing to a disastrous strike, the railways' executives are most anxious to advise the men, *and to advise them to-day*, that the Canadian lines will adopt the rate basis of the McAdoo Award. . . ." and further on

"the labour situation appears to be one which permits of no delay."

It was in the urgent and threatening circumstances appearing from Sir Henry Drayton's letter that the Government, on the next day, 16th July, 1918, as a war measure, adopted P.C. 1768 which virtually enacted into Canada the wages rates of the McAdoo Award, including amendments of extensions thereof. The same Order in Council, by way of re-

couping the railways for this new enormous load, raised the freight rates in Canada by what was 15 per cent.

Following this were some extensions of the McAdoo Award, then in May, 1921, a 20 per cent reduction of the wage scale in the United States followed in October by a reduction in Canada; in Canada a modification 16th January, 1922; in 1925 an increase of 6 per cent in the U.S. followed in Canada in 1926 by a similar increase. Then the wage agreements of 1927 and 1929 above mentioned were made between the present parties.

In the latter half of 1929 began the prolonged and continuing business slide, too vividly experienced for it to be necessary to recall it, and in September, 1931, the railways asked for a reduction in wage rates of 10 per cent. The employees not being willing to the reduction, a Board was constituted. The Board reported under date 30th November, 1931, recommending reduction of the basic rates as asked for. The employees refused a reduction of the basic rate but on 4th February, 1932, the parties agreed to deduction from pay cheques of 10 per cent, the basic rate to remain unchanged. Then the present proposal that from 3rd March the deductions be 20 per cent instead of 10 per cent.

We have felt obliged to relate these changes for they have been referred to throughout the hearings. We have intimated above, and we now say, that in our view the contrast which might justify in February, 1933, the deductions asked for from the rates agreed upon in 1927 and 1929, would be a contrast between the conditions on the two dates. We do not think that references to the conditions on the anterior dates are of special help, though we do not deny that they are of interest. We think that, by using the cost of living tables as their measure, the railways have succeeded in showing that, prior to the present basic rates, increases in wages have outdistanced fluctuations in the cost of living, and also that the margin has been quite noticeably to the advantage of the worker. We think that that is as it should be, and the railways have expressed unreserved assent. We are clear that, though the bare figures of the cost of articles of subsistence and the tables issued by the Dominion statisticians are of considerable help in a matter of this kind, yet taken by themselves alone they are insufficient. This not for the reason suggested during the hearing that they are merely indications of "trends," for they are not, they are actual costs figures, but because multifarious other factors are inseparable from the problem.

With respect to the period preceding the present basic rates, we have not much beyond

the published tables, but with respect to the period between 1927 and 1929 and February 1933, we have, in addition to the cost of living tables, the extremely pertinent figures of the industry in which these men were engaged, and the common knowledge that all of us have, enabling us to contrast the general situations on the two dates. We feel we are fully in a position to contrast the situation of 1927-1929 and that on March, 1933, and that we are fully in a position to state that general commodity values and cost of living, and labour values, namely, rates of pay for all classes, professional, clerical, manual, have diminished in excess of 20 per cent between these two dates.

The other aspect to be considered is, as stated above, the amount of pay that these rates have brought in to the individual. It was said before that the so-called "rate per day" helped little as a basis for calculation, the real basis being mileage. As stated, when mentioning the seniority and demoting rules, the Brotherhoods have fixed monthly mileage maxima which should not be exceeded; these are:

For engineers and firemen, passenger service, 4,800 miles, (as the mileage required to earn a "day's" pay is 150 in the passenger service, the above maximum entitles these men to make 32 days per month, plus arbitraries, overtime, detentions, etc.).

For Engineers and firemen, freight service: 3,800 miles. (The mileage for this service being 100, this maximum entitles these men to make 38 days' pay in a month, plus extras).

For Conductors and trainmen, passenger service 6,250 miles, (equal to 41 days' pay per month, plus extras).

The same on freight service 4,500 miles, (equal to 45 days' pay per month, plus extras).

The fact that there are Brotherhood rules which forbid exceeding these mileages indicates very clearly that to exceed them would be not at all impossible nor unlikely. The fact that it is considered normal for locomotive engineers and firemen to make 32 days' pay per month in the passenger service, and 38 days' pay per month in the freight service, and normal for conductors and trainmen to make 41 days' per month in the passenger service, and 45 days' pay per month in freight service, must, we think, put it beyond doubt that to refer to their rate of pay as being so much "per day" is misleading.

When we had brought to our attention the seniority rules and the demoting rule and then these monthly maxima rules, it seemed as if a limited number of men were getting the employment. We sought to ascertain what on the average each individual's pay would

amount to. It seemed that this information was not easy to secure. The railways had produced as their Exhibit No. 10 the returns made to the Government for statistical purposes in 1931, and again in 1932, of the average annual income of each of the classes of employees now in question. (Transcript page 274). It showed the average income to have been in 1931 \$2,214, and in 1932 (when the 10 per cent deduction was in effect), \$1,963. We were assured by the employees that these figures were not reliable guides as they were mere estimates. Then we took the employees' exhibit No. 2, (transcript page 166) there the average totals in employment year by year were given, together with the total wages paid (transcript page 167). These figures worked out to show the average pay per individual of the train and engine crews was in 1931 C.P.R. \$2,283, C.N.R. \$2,294, and in 1932 C.P.R. \$2,023, C.N.R. \$2,047 (the 10 per cent deduction being effected in 1932).

The employees objected to these figures also (derived from their own exhibit No. 2), saying that they did not take into account the considerable sacrifices of time that these classes were making in order to allow juniors a chance to work, meaning that they were by consent reducing monthly maxima that they were otherwise entitled to. They assured us the only way to get the exact figures would be by examining all the pay rolls—an impossible task to examine the fortnightly pay rolls of 20,000 men over a period of two years. They suggested the possibility of getting communication of the Income Tax Returns.

For our part we were satisfied that the figures on either of the exhibits approximated the exact earnings quite sufficiently to give us the guide we were seeking. We were quite ready to believe that time had been voluntarily given up to juniors, but as much stress has been made upon this point—we wished something definite which would show the extent of it. Then we found it exactly (transcript page 285), namely, in 1931 the trainmen consented that their monthly maximum would be 37 days' pay instead of 42 in passenger service, and 35 days' pay instead of 45 in freight service, and from November 1, 1932, the conductors have consented to diminish their maximum from 41 to 40 days in passenger service and from 45 to 38 days in freight service. Thus, out of regard for juniors, the senior trainmen are entitled at present to earn only 37 days' pay in a month, when in the passenger service, and only 35 days' pay when in the freight service. Conductors may now earn only 40 days' pay per month in the passenger service and only 38 days when in freight service. However by the seniority and demoting rules they are sure to earn all of those reduced

maxima before juniors can get employment at all.

Before sittings terminated the Employees tendered witnesses to prove by concrete cases what the earnings really were. We do not think that much of value was brought out by these witnesses. Gauthier, Locomotive fireman during 1932 employed in the yards at Montreal, and made earnings \$1,838.55; he says he renounced to a considerable amount of mileage; but his figures show that in his year he made and was paid for 378 "days' pay"; in 1930 he had made \$2,840.20 and in 1931 \$2,271.70.

Witzel, freight conductor now acting as brakeman at \$4.91 per day, earns 28 days' pay per month, at \$4.91 equals \$137.48 on the basic rates.

McCollum, Locomotive fireman, Moncton, N.B. earned 1932, \$1,291.

Ferguson, North Bay although 20 years in service is on the extra list and in 1932 earned about \$120 per month.

These are referred to as "examples of the tragedy that has come to the profession," (Transcript page 226).

We think it would serve no useful purpose to attempt to review all the matters put forward as arguments against the proposed deduction of pay. Clearly and definitely the situation appears to us to be this: in good times the numbers of the train and engine crews amount to about 24,000 for the two systems, a number of services have been dispensed with, and in 1932 there were about 17,000 in employ. The diminished amount of work is not divided equitably among the list of 24,000, but is divided according to the seniority rule, the demoting rule, and the monthly maximum rules. It is retained by the seniors; these seniors have suffered but little diminution of employment since 1929, and during all the time they have been on the full basic rates of pay except since 1st December 1931; the juniors roughly the 7,000, have by those same rules been deprived of work almost altogether. The seniority and demoting and the monthly maxima rules make it that those out of work have no interest in the present matter, for there is no work that can come to them, and so no pay. The sole employees interested in opposing the present application are those seniors, they are holding all the jobs and drawing all the pay.

The appeal (transcript page 178) coming from them in the above circumstances is, we consider, unjustifiable. Modifications of the seniority and demoting and monthly maxima rules would very soon alleviate the 7,000 who

are now kept out in the cold. We give the citation as characteristic. (Page 178):

"Our men, women and children must eat; they must be protected from sickness; they must be safeguarded from cold and pain; they must find a way to live like human beings; they must meet their fixed charges; some one must pay these fixed charges...."

Since one year ago thousands of (page 179) "men have lost their jobs. Hundreds of millions of dollars in the savings of the workers and in property owned by the workers, have been used up, in living through the hard year of widespread unemployment. Clothing, household supplies, and furnishings, even reserve supplies of food and fuel, all the absolute necessities of existence have been gradually used up by those who had no income for replacement. Thousands are to-day dependent upon relatives and friends, upon public and private charity, who were not dependent a year ago. Where will you find a railway worker (or for that matter any employed man) to-day who is not supporting new dependants, in addition to those he supported a year ago? Where will you find a household of a wage earner where the standard of living has not been reduced, not only because of reduced wages, but because of the necessity of sharing his work or income, or both, with those who have no work or no income?"

On the whole we find that there has been a decrease in the current price and value, in terms of money, of labour, of all classes, of not less than 20 per cent between 1929 and February 1933; we find that there are no reasons for suggesting that the employees in question should be exempted from this percentage of reduction; we find that by the seniority and demoting and monthly maxima rules the work available has been reserved for seniors to the evident exclusion of juniors; we believe, though this was not established by proof before us, that if the work available had been equitably divided up among the total number, instead of being kept for the seniors to the exclusion of the juniors, there would probably have been no distress among these latter, nor among any of the whole 24,000; that by reason of those rules the juniors are really not interested in the proposed cut, only the seniors are, and they have been in regular employment at almost full regular rates throughout the depression period; that the opposition to the companies' proposal is made by or on behalf of the seniors; that in the circumstances the cut will throw no undue hardship upon them.

We beg to recommend that according to the merits and substantial justice of the case the proposal of the companies should be approved, to be put into effect from first May next, namely, the ten per cent deduction provided in the agreement of February 4, 1932, to continue, and for wages earned after May 1, 1933, an additional deduction be made of 10 per cent, thus making a total of twenty per cent on the wages earned subsequent to May 1, 1933.

The whole respectfully submitted.

*Member.*

### Minority Report

To the Honourable the Minister of Labour,  
Ottawa, Canada.

In the matter of the Industrial Disputes Investigation Act, and in the matter of differences between the Canadian National Railways and Canadian Pacific Railway (subsidiary railways Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railway, and Esquimaux and Nanaimo Railway) on the one hand, and certain of their employees on the other hand, being locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers.

SIR,—The undersigned, a member appointed by you to deal with the above-mentioned matter, has the honour to advise you that, for the reasons hereunder appearing, he dissents from the report dated at Ottawa the 25th day of April, 1933, and signed by the Honourable Mr. Justice G. F. Gibsone, Chairman, and George C. McDonald, Esq., C.A., a member of such Board.

The undersigned does not find it difficult to agree with much that is said in the report of the majority of the Board. There certainly has been a decline of railway traffic. It is undeniable that we are in the midst of economic distress. Clearly all values expressible in terms of money have undergone since 1929 an acute shrinkage. Indeed, this minority report might almost, for the purposes of argument, admit, without conceding, all facts stated in the majority report and proceed at once to state and support the view which finally it presents. If that view be right then it will be immaterial whether any or all facts stated in the majority report are right or wrong. It may be well, however, to correct, with proper respect and due recognition of the complete honesty of those responsible for them, certain errors which, as usual in cases which involve multitudinous matters of fact, were bound to arise. If these errors were not of such a character that they might react un-

favourably upon those whom in a particular sense the undersigned represented on the Board they might and would have been overlooked.

The report of the majority of the Board errs rather seriously with relation to mileage earnings. The undersigned understands that certain railway workers are paid primarily upon a mileage basis, freight mileage, in cases to which it applies being calculated to yield twelve and one-half miles per hour, or 100 miles per 8 hours, and passenger mileage being calculated to yield generally 20 miles per hour or 150 miles per seven and one-half hours. Being paid upon a mileage basis if a railway employee does not get the opportunity to earn mileage (if, say, he is sidetracked) his hours, rating twelve and one-half miles to the hour in the case of freight mileage, and 20 miles per hour in the case of passenger mileage, will run on. Otherwise he would not be earning, although called upon the job, held upon the job and performing a service. The "day" and "hour" measurements are devised to care for such railway workers as, being upon a mileage basis, fail to make the estimated earnable mileage.

With deference, the majority of the Board errs when it states that as soon as the requisite 100 or 150 miles "has been made inside of 8 hours that earned mileage counts for a full day's pay." The pay is by mileage. In such a case no "day's" pay enters into the case. The railway employees, if in less than 8 hours he has made the 100 miles at freight mileage, or the 150 miles at passenger mileage, will not be concerned about day's pay. If he is not at the end of his run he will go right along earning more mileage at the same rate as before. But the runs are generally so laid out that railway workers have not the opportunity to earn extraordinary mileage. It is only theoretically true that a railway employee "may make one and one-half or two days' pay in eight hours." Except in extra-

ordinary cases freight trains do not make 150 or 200 miles in 8 hours, nor do many passenger trains make 225 or 300 miles in 8 hours. When they do the same crews may not make the full run. The divisions are not long enough to permit in fact what is theoretically possible. Railway workers cannot cash in their theoretical opportunities for earning. They are paid only for their actually run mileage or its equivalent worked out upon a time rule. Another thing, the 150 miles per 8 hours rule in passenger traffic applies only to conductors and trainmen in through passenger service, such as on runs from Montreal to Toronto. It is not a fact that a railway employee who is called to duty at all is "entitled to a full day's pay."

The seniority rules are not, as stated in the majority report, "self imposed by the men themselves without participation by the companies and carried out under the surveillance of the Brotherhoods' officers." On the contrary these rules have been agreed to by employers and employees alike and are part of the conditions of employment settled as between them. The railways support and apply the rules mentioned and it is to their advantage to do so. Most large industries, even in the absence of labour agreements apply of their own volition like rules to the employment of labour.

There seems to run through the whole of the Report of the majority of the Board a disparagement of, at times amounting almost to an attack upon, the system of labour employment which has been applied for many years by Canadian and United States railways. It is not modesty but discretion that leads the undersigned to admit that the railway managements know their business as well at least as he does. He will concede, even, that they know it better. The history of the McAdoo award, as recited in the majority report, while merely atmospheric is undesirably atmospheric. Whether that award, made away back in 1918, was or was not a "war measure" and whether or not the introduction into Canada of equivalent wage rates was a "war measure" or the result of an anticipated or possible strike is wholly immaterial to the present day issue before the Board. If the railways have been in the past "shaken down" by unpatriotic employees (which is denied) there has been every opportunity since to right the wrong. Seemingly, however, the railways were rather pleased with the effects of the McAdoo award and its Canadian equivalent. Several substantial increases of rates of wages have been made by them since its promulgation in 1918. The culmination came in 1927 and 1929 when the basic rates which the railways, parties to the

present dispute, concede are so fair and reasonable under normal conditions that they should be retained intact and applied as soon as possible again, were set and agreed upon. These basic rates considerably exceed those of the McAdoo award. In writing with relation to wage increases and reductions since the McAdoo award the majority of the Board errs as to fact in one respect. The reduction of basic rates made in the United States in May, 1921, was not one of 20%. It was one of 12%. In the following October the basic rates in Canada were reduced as to some railway crafts in the same degree, that is 12%. By January, 1922, all Canadian railway crafts had suffered a like reduction. Then in 1925 came a United States increase of 6% in basic rates. In 1926 Canadian railways followed suit. As stated, the now prevailing basic rates were fixed in 1927 and 1929. All agree that under normal conditions these rates are not excessive or extraordinary, but, instead, fair and reasonable. It is therefore somewhat surprising to the undersigned to read in the report of the majority of the Board considerable matter which seems designed to indicate that the earnings of the railway employees are higher than they ought to be at any time or under any circumstances. In this connection the majority of the Board has very clearly and materially erred as to fact and in such manner as to impair seriously the value of several of its subsequent conclusions. It sought to discover "the amount of pay that these rates have brought in to the individual", and having worked out (for some purpose neither mentioned nor apparent) the number of "days" which, theoretically, a railway employee, such as an engineer or firemen in passenger service who, with a maximum of 4,800 miles permitted mileage, and taking 150 miles travel as a "day", could earn, such majority finds that the employee may work 32 days per month, plus extras. The best that can be said possibly, as to this demonstration, is that it contains no arithmetical errors. The engineer or firemen, if things which are practically sure to prevent do not prevent may work the 32 "days". He may, indeed, work more "days", for, as a matter of fact, the majority of the Board has erred in applying to him the wrong rule. This mileage business was not discussed in open session of the Board in the presence of the parties—hence liability to error when invading, guideless, a foreign field. The majority of the Board has in the same connection erred in other respects. For example, the maximum mileage of a trainman in passenger service is 5,500 miles—not 6,250 miles, as stated. The majority of the Board, as a result of this error stated his theoretical earning power by

days as being 41 days per month. It is only 36 days per month. Further, the maximum mileage of a trainman in freight service is not 4,500 miles per month, as stated, but only 3,500 miles per month. This error of the majority of the Board led it to state as actual his theoretical earning power by days as "45 days per month, plus extras." It is really 35 "days" per month.

Errors such as these and others appearing in the majority opinion of the Board—errors which in cases enhance by 25 per cent or more the real earning capacity of employees, detract seriously from the value of the deductions of the Board as to the obligation or capacity of railway employees to stand a 20 per cent deduction from the existing basic rates of wages. Doubtless any particular employee who has been earning or receiving only 75 or 80 per cent of the earnings ascribed to him would be quite content to receive the ascribed wages and forfeit 10 per cent or more of them. Such a man would not be surprised if asked to make the contribution mentioned. Errors of fact such as indicated rock the very base of the majority report of the Board. It should not be overlooked that, in general, the railway workers, some of the crafts with greater generosity than others, have voluntarily restricted themselves as to earnings in the interest of their unemployed brethren, former employees who have been laid off by the railways because of lack of traffic. For example, the passenger and freight brakemen and baggage-men and the majority of yardmen are said to have given up from \$15 to \$30 per month each, in opportunity to earn wages in the interest of junior employees who have been laid off. In some cases these limitations upon earning power have been in effect for three years. It is at least plausible that in case the imposition of a further cut in income should compel such railway employees as have been sharing work with their unemployed juniors to reserve to themselves hereafter their full opportunity to earn, thus throwing the mentioned junior employees upon their respective communities for support, the now proposed cut will be of doubtful value to either the Dominion government—owner of Canadian National Railways but fairly godfather to the unemployed, or the Canadian Pacific Railway—Canada's largest taxpayer.

Apart, however, from all considerations heretofore mentioned the undersigned is of opinion that upon legal grounds these proceedings must fail of effect.

These legal grounds are as follows:—

When, on January 28, 1933, the notice upon which the application in the present proceedings is based was made a right to deduct 10 per cent off basic rates of pay, actually in

effect as the result of an agreement or collective bargain but subject to the terms of a certain agreement dated February 4, 1932, was in existence. At the time of the application for this Board it was not. The employers assumed that it was. The employees contended, and the undersigned is of opinion that they were right, that such agreement was not in effect. The right mentioned, which expired on January 31, 1933, existed by virtue of agreement. It was limited in point of time. On February 1, 1933, upon the expiration of the time limited by that agreement, of February 4, 1932, the situation for the purposes of the Industrial Disputes Investigation Act, in a case of proposed reduction of wages was as follows: Section 58 required at least thirty days' notice of an intended "change affecting .....wages" and in the case of non-acceptance by the employees (that is in the absence of agreement for a reduction), the Act provided that "it shall be unlawful for the employer to make effective a proposed change in wages.....or for the employees to go on strike" until a Board should be established and all the terms of the Act be fulfilled. The application for the Board must have been made "by the employers proposing the change in wages," (sec. 58) and the employers were forbidden by the Act to "alter the conditions of employment with respect to wages," until the Board should have fulfilled its functions. As to the interim, the Act provided that "the relationship of employer and employee shall continue uninterrupted by the dispute or anything arising out of the dispute." (Sec. 58) Sections 6 and 16 of the Act support and expand the foregoing.

The undersigned is of opinion that the Industrial Disputes Investigation Act does not authorize any Board organized under it to declare that a basic rate of wages existing by agreement of parties and desired to be preserved by them, a rate of wages payable under an unimpaired and unassailed, indeed mutually supported, collective bargain or agreement, can be or ought to be affected by anything which this Board may report. The proposal of the majority of the Board implies that notwithstanding the acknowledged existence of agreements fixing rates of wages which agreements evidence in the words of the Act a "condition of employment with respect to wages" which may not lawfully be changed except upon compliance with the Act, a Board established under that Act, noting that in 1932 the railway employees agreed, individually, to accept for a definite and now expired period a 10 per cent deduction from the amount rightfully owing to them under an existing and presently unimpaired agreement whereunder they were individually entitled

to full payment, may declare that such employees should individually be subjected without agreement and for an indefinite period and without previous compliance, on the part of the employers, with the Act, to an individual 20 per cent deduction from what is by law rightfully due them, collectively, according to the terms of that existing unimpaired, unassailed and mutually supported agreement.

It is necessary for the purposes of the Act to locate and identify the condition respecting wages as of February 1, 1933, so that the change of condition upon which the application of the Act to the dispute between the parties depends may appear. If on February 1, 1933, the wages rates as fixed by the agreements of 1927 and 1929 applied they would represent and disclose the condition, and any change of it must relate to such rates. If the proceedings before and the jurisdiction of this Board, (which turn upon the application and the terms of the dispute between the parties as stated in the application) related to a reduction of the basic rate—to a lowering by 20 per cent of some or all of the wage rate items of the wage schedule of the existing agreements as to working conditions—there would be a consistent case and one clearly within the Act. The Macdonnell Board, of 1931, (whose report being not accepted by the employees was disregarded by both parties) was consistent with the Act, in declaring its opinion, right or wrong upon the merits, that the items of the basic rates as set forth in the agreements of 1927 and 1929 should be reduced by 10 per cent. That Board located the condition as to wages and favoured its change. But before the Board in the present case both parties insisted that the agreement relating, among other working conditions, to wage rates continued, and must continue in effect. The employers at the very end of the proceedings before the Board, stated with the utmost impressiveness that they were not demanding and had never intended to demand any impairment of the agreement which established the basic wage rates. This admission settles a very important point,—to wit that no notice given to the employees has demanded or was intended to demand or notify of any desire or intention to reduce the basic rates. Thus if the condition relating to wages was, within the meaning of the Act, on February 1, 1933, that the employees were entitled to be paid the "basic rates," meaning those of the yet existing agreements of 1927 and 1929, no notice of intention or desire to change that condition has ever been given and, regardless of any report or opinion of this Board, that condition relating to wages

cannot lawfully be changed until notice of intent or desire to change it is given and a Board has been erected under the Act to deal with the dispute, if any, that may arise as a result of the giving of the notice.

The undersigned submits that on February 1, 1933, the condition as to wages was that the "basic rates" above mentioned applied. The soundness of this submission depends upon the true construction of the already mentioned agreement of February 4, 1932. The situation at the time when the parties wrote and signed that agreement was as follows:—

The Macdonnell Board had expressed its opinion, by a majority, that there should be a 10 per cent reduction of the basic rates. Acceptance of this opinion, if it were accepted in accordance with its terms, would have entailed an impairment of then and now existing collective bargains, and, so far as agreement was concerned, would have entailed action by the employees, in the future, towards the obtaining of a Board under the Act whenever they might be impelled to seek restoration of their 10 per cent loss of income. The employees refused to accept that Board's recommendations. The employers and the employees conferred. As they conferred the employers were free to lock out and the employees were free to strike. A Board had effectively functioned. The Act had been complied with. Understanding the "principle" of the Board's decision to be that the employees should undergo a 10 per cent cut in wages, the parties, rejecting the decision, accepted its "principle." The decision embraced only three elements—1. The 10 per cent cut. 2. Reduction of the basic rates to produce it. 3. Retroactivity of the cut. Reduction of basic rates was rejected. So was the matter of retroactivity. Only the 10 per cent cut, to be had otherwise than by reduction of basic rates and without retroactive application, survived.

The precise terms of the operative part of the agreement of February 4, 1932, upon which so much depends, were as follows:—

- "(a) 10 per cent shall be deducted from each employee's pay cheques." (Note that each employee gives up by way of deduction 10 per cent of an amount otherwise coming to him).
- "(b) "Basic rates of pay as specified in the various schedules shall remain in effect." (Note that this provision reinforces the idea of an individual concession of 10 per cent by each employee).
- "(c) This agreement shall be effective from December 1, 1931, to January 31, 1933, but if, on or after December 1, 1932, business conditions have not so im-

proved as to enable the railways to terminate the agreement at January 31, 1933, notice of that effect will be given to the representatives of the employees, upon which the parties to this agreement will confer further and" (they?) agree to make every reasonable effort to bring the matter to a conclusion before the 31st of January, 1933. (Note that no part of paragraph (c) of this agreement affects or impairs the defined period during which, per that paragraph, the agreement is to be effective.) Note also that the only part of the agreement which can have been meant to "remain in effect" is paragraph (a) relating to the deduction of the 10 per cent from individual pay cheques. There are only the three paragraphs, (a) relates to the 10 per cent deduction, (b) keeps the basic rates in effect notwithstanding (a), and (c) is the paragraph which provides the defined period.)

It has been said that no part of paragraph (c) of the agreement affects or impairs the defined period of effectiveness of the agreement of February 4, 1932. If on or after December 1, 1932, the employers (because business conditions have not improved "so as to enable the railways to terminate the agreement at January 31, 1933"), realize that they will not be able to resume payment of the basic rates they are to give "notice to that effect" to the employees, whereupon, as they agree, the employers and employees, "will confer further." They are to endeavour "to bring the matter" (as to whether the employers are able to resume payment of the basic rate after January 31, 1933), "to a conclusion before the 31st of January, 1933." This is no more than an agreement to confer and, if possible, to agree, relating to possible release of the employers from contractual obligation. The expression "so as to enable the railways to terminate the agreement at January 31, 1933," as used in the agreement is ambiguous. The employers had by the agreement fixed the period of its duration as from December 1, 1931, to January 31, 1933. Their construction of the expression, apparently adopted by the majority conclusion of this Board, seems to be that it means "so as to enable the railways to resume payment of the basic rates at January 31, 1933." Adopting this not unreasonable construction it appears from the agreement of February 4, 1932, that the employers, having the right to deduct 10 per cent from individual pay cheques only until January 31, 1933, were granted by the agreement the advantage, exerciseable at any time after December 1, 1932, in case in their opinion business conditions made it apparent that

whatever might be the obligation of their agreements they would not be able on January 31, 1933, to resume payment at the basic rates, of giving to the employees notice that they, the employers would not be able on February 1, 1933, to resume payment of the basic rates, and thus procuring as of right a discussion with their employees, which might result, before default, in concessions by them. Upon notice being given the parties, according to the agreement, were to "confer further" (as to what was to be done relating to the inability of the employers to resume payment of the basic rate after January 31, 1933), and, if possible, reach, by agreement, a conclusion as to that matter "before the 31st of January, 1933." The notice was given, the parties conferred but did not before the 31st of January, 1933, or at all, reach a conclusion, wherefore, the temporary agreement of February 4, 1933, having expired, the older then and now continuing, agreement with relation to wages and working conditions, and setting and applying the rates of wages continued in effect free of any right in the employers to deduct from the cheques of individual employees 10 per cent or any other amount. Nothing in the agreement of February 4, 1932, enables the employers to make after January 31, 1933, any such deduction. The basic rates of pay being lawfully in force on February 1, 1933, and presenting and representing the condition as to wages which per the Act could not be changed until after notice given of intent or desire to change it, after a Board established and after the applicable terms of the Act executed, it follows that every railway employee whose pay cheque has been, since February 1, 1933, subjected to a 10 per cent deduction has a personal claim for the amount so deducted against his employing railway; also that, no statutory notice to change the still effective basic rates having been given, they are not affected by anything said or done by or before this Board; also that, in the circumstances, the proceedings had before this Board must prove ineffective.

At the final conference of the members of this Board, the undersigned, thinking that the considerations above expressed, plus the consideration that in October next the rates of wages payable in the United States will be under review, justified the calling together for purposes of conciliation of the parties to the present dispute, and the suggesting for consideration to them the maintenance until October next of the status quo, the employees abandoning any claim for wages withheld from them. The majority of the Board was adverse.

The maintenance of the status quo until October next would seem to be desirable on several grounds, not the least of which is that

both of our great Canadian railway systems have extensive trackage and terminal facilities in the United States and to some extent United States railways cross or pierce Canada. It is customary for those short of anything acceptable as a reason for refusing to compare the earnings of Canadian railway employees with those of the United States to ask "Why compare conditions in Saskatchewan with those in Alabama or those in New York with those in Prince Edward Island?" Why, indeed? But why not compare New Brunswick with Maine or Vermont, Ontario with New York or Michigan, Manitoba with Minnesota, British Columbia with Washington. Whether the conditions of the two countries are comparable or not it is the fact that for twenty years past at least railway wages on both sides of the international boundary have kept pace, upwards and downwards, and have maintained always about the same level. At present the United States level is about six per cent above that of Canada. The further 10 per cent reduction now proposed if put into effect will make the Canadian level 16 per cent below that of the United States. Yet every reason urged before the Board in favour of such reduction could be applied to the United States railways. Perhaps in October next the United States level may fall. In that event there could be and would be little complaint, if any, from Canadian railwaymen if their wages were correspondingly reduced. They would be receiving the "market rate." They are now to be asked to accept 16 per cent under it. Canada, from the railwaymen's standpoint, is for the most part a narrow streak of land that runs along the northern boundary of the United States. To tell him that his working conditions do not resemble those of his like in the United States is merely to exhibit to him unfamiliarity with geography and as well, perhaps, something else.

The undersigned recommends that according to the merits and substantial justice of the case the proposal of the employing companies should not be approved for the reason that agreements or collective bargains made between the parties, employers and employees, in the years 1927 and 1929, concerning working conditions, wages and hours of labour remained and were in full effect at the time of the notice referred to in the application for the Board herein, and are so now, and no notice has ever been given of intent or desire to change them; for the further reason that such agreements or collective bargains constitute and disclose a condition with relation to wages which cannot be lawfully changed unless and until, after notice has been given under the Industrial Disputes Investigation Act stating an intent or desire to change such

condition, a Board established under that Act to deal with any consequent dispute has reported and that Act has been otherwise complied with; for the further reason that the application and subsequent proceedings had herein are ineffective in that such application and proceedings herein before and subsequent thereto, require and look, not to any change of existing conditions respecting wages but to a change of a supposed but non-existent condition, to wit that the employers on and after February 1, 1933, were as of right entitled to deduct from each pay cheque of each individual employee 10 per cent of the amount coming to him pursuant to the terms of certain agreements or collective bargains made in 1927 and/or 1929 between the parties employer and employees, to these proceedings, which supposed right did not and does not exist, the same having terminated on the 31st day of January, 1933; and for the further reason that no notice having been given of any intention or desire on the part of the employers to change the rates of wages existing by agreement or collective bargain between the employers and the employees, but, instead, merely a notice requesting or requiring agreement of individual employees to the deduction of 20 per cent from the amount of their respective pay cheques, properly payable in full according to such rates of wages and such agreement or collective bargain, which both the parties, employers and employees, admit and maintain is in existence, these proceedings do not present or disclose any dispute with which a Board established under the Industrial Disputes Investigation Act can effectively or lawfully deal.

All whereof is respectfully submitted.

W. F. O'CONNOR,  
*Member.*

AYLMER, P.Q., April 29, 1933.

With reference to the above minority report by Mr. O'Connor, the following statement was subsequently received in the Department of Labour from Mr. Justice Gibsons and Mr. McDonald, the signatories to the Board report:—

"NOTE.—The authors of the majority Report, having read the Dissent, would like to say: 1. that it was by copyist's error that the U.S. decrease in 1921 was stated as 20 per cent instead of 12 per cent,—the latter being the correct figure, and 2 with that exception, all the 'errors of fact' which the Dissent alleges against the Report are in our opinion unfounded, and a reference to the Transcript, or to the documents produced, would we think disprove these allegations."

## CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM NOVEMBER 1, 1932, TO APRIL 30, 1933

PREVIOUS issues of the LABOUR GAZETTE dealt with the more important cases of conciliation work carried on by the Department up to the end of October, 1932 (November, 1932, page 1158). The present article brings the record up to April 30, 1933.

Conciliation proceedings are carried on for the most part under the provisions of the Conciliation and Labour Act, which empowers the minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation under the Act.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal and Halifax. The territory of the officer resident in Vancouver comprises the three western provinces. The Winnipeg officer's territory is the province of Manitoba. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec. The territory of the officer residing in Halifax includes the three Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

*Saint John, N.B.*—A Board of Conciliation and Investigation established in November, 1932, which had dealt with a dispute in respect to wages and working conditions between the various shipping interests of the Port of Saint John, N.B., and certain of their employees, being longshore workers, coal handlers and trimmers and ship liners, members of Locals Nos. 273, 810 and 1039, International Longshoremen's Association, filed its report early in December. Among other things the Board recommended certain reduced hourly rates which approximated a reduction of 14 per cent. Upon receipt of the report an officer of the Department discussed the matter with officials

of the shipping interests and employees on the basis of a 10 per cent reduction. Subsequently direct conferences between the interested parties resulted in a settlement on this basis.

*Princeton, B.C.*—On December 15, 1932, the Western Representative of the federal Department of Labour, together with the Deputy Minister of Labour for the Province of British Columbia, visited Princeton in an effort to negotiate a settlement of a strike which had been in existence for some time involving the Pleasant Valley Coal Mining Company. The officials of the colliery, while assuring the governmental representatives of their willingness to grant certain concessions if a meeting could be arranged between themselves and the employees of their mine, refused to recognize the Mine Workers' Union of Canada or deal with their representatives. The miners, on the other hand, insisted on dealing through a committee of the union. Being unable to reconcile the parties on this point, the governmental representatives left the district as the operators of the colliery stated it was not their intention to make further efforts to reopen the mine.

*Winnipeg, Man.*—In the spring of 1932 the Department was requested by the International Vice-President of the Amalgamated Association of Street and Electric Railway Employees of America to investigate the complaint of a motorman in the employ of the Winnipeg Electric Company in respect to his seniority. An officer of the Department when in Winnipeg, in July, 1932, discussed this matter with the company officials, officials of the Street Railway Employees' Unit, One Big Union, with which group the company had an agreement, and also with Local officers of the Amalgamated Association of Street and Electric Railway Employees of America. It developed that the Winnipeg Electric Company was agreeable to allowing the motorman his full seniority claim but no concession would be made by officers of the Street Railway Employees' Unit, they maintaining that the complainant's case had been previously investigated by their own committee and that it had been shown that no injustice had been done. The dispute on this point arose in 1919, but was not brought to the attention of the Department of Labour until 1932. Due to various complications which had arisen during the intervening years it was not found possible to deal satisfactorily with the matter.

*Levis, Que.*—In November, 1932, the Department was notified by the Association of Licensed Sailors of the Levis Limited Ferry Service that their members had declined to accept the wages reduction proposed by the Levis Limited Ferry Service and intimated that they desired the establishment of a Board of Conciliation to deal with the matter. Following receipt of this notice the Department took the matter up with the employing company and, as a result of further conferences between the interested parties, word was received that an agreement had been reached.

*Cafe Car Employees—Ottawa-Toronto.*—Early in November, 1932, the Canadian Brotherhood of Railway Employees complained to the Department that the Canadian National Railway management had failed to make effective a decision of Board of Adjustment No. 2 in regard to cafe car crews assigned to trains Nos. 35 and 36 between Ottawa and Toronto, and intimated that unless this decision was complied with an application for a Board of Conciliation and Investigation would be made. This matter was brought to the attention of the Canadian National Railways and a conference arranged between the interested parties. No Board application was received and it is assumed that the matter was disposed of amicably.

*Saint John, N.B.*—On November 28, 1932, an application for the establishment of a Board of Conciliation and Investigation was received from members of Local Union No. 605, International Brotherhood of Electrical Workers, Saint John, N.B., and vicinity, covering men said to be engaged in every classification in the telephone industry and employed by the New Brunswick Telephone Company, Limited. The main cause of the dispute had to do with a proposed furlough system. One hundred and forty men were directly affected. The application further alleged that schedule increases had been cancelled, general reductions in pay made effective, etc. The Montreal representative of the Department of Labour was instructed to proceed to Saint John at once and discuss the matters mentioned with the parties directly concerned. A conference was arranged by the Departmental representative between representatives of the employees and company officials and, as a result, after prolonged negotiations, a settlement was reached and the application for a Board was withdrawn.

*Winnipeg, Man.*—In January, 1933, as a result of an intimation from the Crescent Creamery Company, Winnipeg, Man., of a proposed wages reduction affecting the inside men, an official of the International Brotherhood of Teamsters interviewed the Winnipeg representative of the federal Department of Labour in

regard thereto. At the end of the month, as a result of conferences, it was understood that a settlement of the issue had been reached. It developed, however, on or about the middle of March, that the dispute still existed, but no further word has been received as to the outcome.

*Drumheller, Alta.*—While in Calgary early in January the Western representative of the Department of Labour discussed with the Drumheller Coal operators and officers of the United Mine Workers of America the matter of the renewal of the working agreement expiring on April 1 and urged upon both parties the advisability of opening negotiations at an early date. Conferences between the two groups were opened on March 6, 1933, but as an agreement could not be reached the Department, upon the request of both parties, arranged for its Western representative to sit in on the conferences which were to be resumed on March 21. The conferences continued until April 8, on which date an agreement was signed which was subsequently ratified by a majority vote of the miners.

*Montreal, P.Q.*—On February 16, 1933, some 1,800 cloak and suit factory workers employed in approximately sixty-five establishments in Montreal ceased work, demanding new agreements between the International Ladies' Garment Workers' Union and the employers. In 1932 the clothing manufacturers had signed an agreement with this union to run for two years. Disputes had arisen as to alleged violations of the agreement and failure to settle these under its provisions. The Montreal representative of the federal Department of Labour arranged for conferences between a representative of the employers' organization and a representative of the strikers. Subsequently from time to time individual firms signed separate agreements with the Union and owing to the satisfactory progress then being made in direct negotiations the departmental officer was informed that his assistance would no longer be required.

The Department of Labour sustained a serious loss in the sudden death, on April 20, of Mr. William M. Macintosh, departmental representative at Winnipeg and officer in charge of the Western Clearing House of the Employment Service of Canada in Winnipeg. Before going to Winnipeg in 1923, Mr. Macintosh was employed for two years in the British Columbia Employment Service in its office at Nelson. During the war he served with the 102nd Infantry Battalion of Northern British Columbia until its disbandment in 1919. Mr. Macintosh was born in Fifeshire, Scotland, in 1891. He is survived by his widow and two children.

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1933

THE following table shows the number of disputes, workers involved and time loss for April, 1933, as compared with the previous month and the same month a year ago.

| Date           | Number of disputes | Number of employees involved | Time loss in working days |
|----------------|--------------------|------------------------------|---------------------------|
| *Apr. 1933 ... | 5                  | 690                          | 4,435                     |
| *Mar. 1933...  | 10                 | 1,840                        | 12,945                    |
| Apr. 1932....  | 9                  | 1,350                        | 28,517                    |

\* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts recorded for April is only one-half of that shown for March, 1933, the number of workers involved and the time loss incurred showing an even greater decline from the previous month when disputes of textile and women's clothing factory workers in Quebec and Ontario involved some 1,300 workers with a resulting time loss of 8,600 working days. As compared with April, 1932, a substantial decline occurred in the number of disputes recorded and in the number of workers involved, the time loss being only about one-seventh of that recorded for the same month last year when strikes of coal miners in Alberta caused a time loss of approximately 20,000 working days.

Three disputes, involving 115 workers, were carried over from March, one of the strikes recorded as unterminated in the April issue of the LABOUR GAZETTE having terminated at the end of March, as noted below. Two disputes commenced during April. Of these five disputes, three were terminated during the month, two being in favour of the employer concerned and a compromise settlement being reached in the third. At the end of April, therefore, there were two disputes in progress

recorded as strikes or lockouts, namely: compositors, Winnipeg, Man., and coal miners, Drumheller District, Alta.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not declared terminated. Information is available as to nine such disputes, namely: photo engravers, Toronto, Ont., commencing March 23, 1931, one employer; photo engravers, Toronto, and London, Ont., Montreal and Quebec, P.Q., and Winnipeg, Man., May 4, 1931, one employer; compositors, Regina, Sask., November 21, 1931, one employer; motion picture projectionists, Winnipeg, Man., February 27, 1932, one employer; motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; lithographers, Toronto, Ont., April 15, 1932, one employer; motion picture projectionists, Toronto, Ont., February 6, 1933, three employers; motion picture projectionists, Saint John, N.B., March 6, 1933, one employer; and women's clothing factory workers, Toronto, Ont., February 7, 1933, one employer, this last being added this month. The dispute involving copper miners and smelter workers employed by one firm at Anyox, B.C., commencing February 1, 1933, and added to this list last month, was called off by the union on April 20, 1933, and has consequently been removed from the list.

In connection with the dispute involving employees in a custom tailoring establishment in Vancouver, B.C., mentioned in a note in the April issue of the LABOUR GAZETTE, information was received later to the effect that the strike occurred in a wholesale clothing establishment as a result of a change in piece-rates instituted by the employer in connection with a new method of manufacturing. Approximately fifty pressers, cutters, etc., members of the Journeymen Tailors Union, on March 3, 1933, ceased work, demanding a slight increase in wage rates and recognition of the union. The representative of the provincial government, Mr. J. H. McVety, arranged for and attended conferences between the parties involved, with the result that on March 10, 1933, work was resumed on the conditions as demanded by the strikers and set forth in a signed agreement with the union.

In connection with the cessation of work for one day in a textile factory at Brantford, Ont., noted in the April issue of the LABOUR GAZETTE, information has been recently re-

## STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1933\*

| Industry,<br>occupation and locality  | Number<br>of<br>workers<br>involved | Time<br>loss in<br>working<br>days | Remarks   |
|---|-------------------------------------|------------------------------------|---|
| (a) Strikes and Lockouts in Progress Prior to April, 1933.  |                                     |                                    |   |
| MINING, NON-FERROUS SMELTING<br>AND QUARRYING—<br>Coal miners, Medicine Hat,<br>Alta.....                                   | 25                                  | 250                                | Commenced Jan. 23, 1933; against reduction in wages; lapsed by April 30, 1933; in favour of employer.   |
| Coal miners, East Coulee,<br>Alta.....  |                                     |                                    | Commenced Mar. 10, 1933; for payment of wages due; terminated by Mar. 31, 1933; indefinite.   |
| MANUFACTURING—<br>Textiles, Clothing, etc.—<br>Women's clothing factory<br>workers (cloaks and suits),<br>Toronto, Ont..... | 75                                  | 1,000                              | Commenced Feb. 7, 1933; for agreement with 40-hour week and partial restoration of wage decreases; working conditions no longer affected by April 30, 1933; compromise. |
| Printing and Publishing—<br>Compositors, Winnipeg, Man..  | 15                                  | 360                                | Commenced Mar. 13, 1933; against reduction in wages; unternminated.   |
| (b) Strikes and Lockouts Commencing During April, 1933.   |                                     |                                    |   |
| MINING, NON-FERROUS SMELTING<br>AND QUARRYING—<br>Coal miners, Drumheller,<br>Wayne and East Coulee, Alta                   | 500                                 | 2,500                              | Commenced Apr. 24, 1933; against reduction in wages; unternminated.   |
| MANUFACTURING—<br>Textiles, Clothing, etc.—<br>Weavers, etc. (cotton), Mill-<br>town, N.B.....                              | 75                                  | 325                                | Commenced Apr. 17, 1933; against reduction in wages; terminated Apr. 22, 1933; in favour of employer.   |

\*In this table the date of commencement is that on which time loss first occurred, and the date of termination is the last day on which working time was lost to an appreciable extent.

ceived that one hundred weavers engaged in the manufacture of woollen cloth ceased work on March 11, 1933, as a result of the introduction of an efficiency system involving the operation of two looms by one person and fines for damaged work. It is reported also that a demand was made for payment for the time when material was not available. The management met a committee of the strikers, agreed to make some improvements, and work was resumed the following Monday.

Disputes involving men on unemployment relief work, not paid wages but receiving subsistence for which some work is performed or may be required, are not included in the record as no relation of employer and employee is involved.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

COAL MINERS, MEDICINE HAT, ALTA.—The twenty-five coal miners involved in this dispute, which commenced on January 23, 1933, against a reduction in wages, having been replaced to a great extent, the dispute is recorded as having lapsed by April 30, 1933.

COAL MINERS, EAST COULEE, ALTA.—In connection with this dispute, which commenced on March 10, 1933, for payment of back wages, reported as unternminated in the April issue of the LABOUR GAZETTE, information has since been received that the employer had closed the mine for the season. An investigation was made by the Provincial Inspector of Mines with the result that the workers received an instalment on the wages due. The dispute is, therefore, recorded as terminated as from the end of March and no time loss entered for April.

**WOMEN'S CLOTHING FACTORY WORKERS (CLOAKS AND SUITS), TORONTO, ONT.**—As stated in the April issue of the *LABOUR GAZETTE* one firm only, and seventy-five workers, were involved in this dispute at the end of March, most of the firms concerned having from time to time reached agreements with the union, compromises being effected on the points in dispute. At the end of April employment conditions being no longer affected, the dispute is recorded as terminated, but not having been called off by the union with respect to one establishment, it is included in the list of such disputes mentioned above.

**COMPOSITORS, WINNIPEG, MAN.**—It was reported at the end of April that no change had occurred in connection with this dispute, which commenced on March 7, 1933, in one establishment, concerning a fifteen per cent reduction in wages, the employees still refusing to work at rates below those set by the union. Other job printing offices in the city, however, had on April 22 signed an agreement to be in effect from April 17, 1933, to March 31, 1934, providing for a rate of 80 cents per hour, a reduction of ten per cent from that previously in effect and only five per cent higher than the scale in dispute. At the end of the month, therefore, the dispute is recorded as untermiated.

**COAL MINERS, DRUMHELLER DISTRICT, ALTA.**—Employees in a number of mines in the district ceased work on April 24, 1933, against a wage reduction of twelve and one-half per cent which was also made in other mines in the district as the result of an agreement between the operators and District 18 of the United Mine Workers of America. At the end of the month the dispute had not been reported terminated.

**WEAVERS, ETC. (COTTON), MILLTOWN, N.B.**—A number of weavers, followed later by some of the spinners and carders, in a cotton manufacturing establishment ceased work on April 17, 1933, as a result of a wage reduction of ten per cent, seventy-five employees being on strike while the other employees continued to work. The reduction had been made in other establishments of the company in New Brunswick and in Ontario and was accepted by the employees, being the only reduction to date. The carders and spinners returned to work after one day, but the employer had stated that it would be necessary to suspend operations within a short time if the weavers did not return also. The Mayor and the Town Council interviewed the parties to the dispute and as a result of a meeting of the strikers and the management the employees agreed to accept the wage reduction and work was resumed on the next working day.

## STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

### Great Britain

**T**HE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing down to date that given in the issue of February, 1933, in the review of Strikes and Lockouts in Canada and Other Countries, 1932. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the Government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

The number of disputes beginning in March was 36 and 10 were still in progress from the previous month, making a total of 46 disputes in progress during the month, involving 17,900 workers with a time loss of 146,000 working days for March. Of the 36 disputes beginning in March, 7 were over demands for increased wages, 9 over proposed wage reductions, 8 on other wage questions, one on a question of working hours, 9 on questions respecting the employment of particular classes of persons and 2 were due to sympathetic action. Settlements were reached in 32 disputes, of which 5 were in favour of workers, 12 in favour of employers and 15 ended in compromises. In two other disputes, work was resumed pending negotiations.

The strike of approximately 3,800 railway traffic workers in Northern Ireland, which began January 31 and was noted in the last three issues of the *LABOUR GAZETTE*, was settled April 8. It was agreed that from May 1

wages would be  $7\frac{1}{2}$  per cent reduced from the rates in effect before May, 1931, but the annual one week's vacation was to be taken without pay during the next year, which would make annual earnings approximately the same as if the 10 per cent reduction recommended by the Irish Railway Wages Board had been put into effect.

### Irish Free State

The dispute involving railway workers in Northern Ireland which extended to employees of the same railway company in the Irish Free State was settled April 8, and it was agreed by the unions that the  $7\frac{1}{2}$  per cent reduction in wages from rates in effect before May, 1931, were to apply to the other large railway company as well. About 4,000 employees of this latter company however went out on an unofficial strike for two days, April 10 to April 12, in protest against this wage reduction, but work was resumed on the original terms.

### France

Statistics for the third quarter of 1932 showed 24 strikes involving 4,888 workers in July, 22 strikes involving 3,471 workers in August, and 26 strikes involving 913 workers in September.

A lockout to enforce wage reductions of 10 per cent in certain motor car factories in Paris involved 21,000 workers between March 30 and April 5, when work was resumed at the reduced rate. Owing to the continued dissatisfaction of the workers with these terms, they were again locked out April 6 and no report of a settlement has been noted.

### Poland

About 70,000 cotton spinners in the Lodz district were on strike for about a month against proposed wage reductions. The settlement was a compromise by which wage rates were to be from 12 to 15 per cent lower than in the year 1928.

### United States

Preliminary figures for the year 1932 give the number of disputes beginning in the year as 704 which involved 232,092 workers. The time loss for all disputes in progress during the year was 6,098,769 working days.

During February, 1933, 45 disputes began and 37 were in progress at the end of the month. The number of workers involved in disputes in effect at the end of the month was 11,011 and the time loss 197,283 working days for all disputes in progress during the month.

## COMBINES INVESTIGATION ACT

### Report on Alleged Combine in Distribution of British Anthracite Coal in Canada

AN extensive inquiry into an alleged combine in the importation and distribution of British anthracite coal in Canada was completed in April. The investigation was conducted by the Registrar of the Combines Investigation Act at the direction of the Minister of Labour, following complaints made in 1932 charging the existence of a combine. The commencement of the inquiry was noted in the LABOUR GAZETTE, December, 1932, page 1258. In the course of the inquiry approximately seventy witnesses were examined in sessions held at Montreal, Toronto, Quebec City and Ottawa, the chief centres of distribution of British anthracite coal. The hearings occupied forty-four days, concluding on March 30, and were conducted in private in accordance with section 25 of the Combines Investigation Act. Witnesses examined included a wide representation of importers, wholesalers and retailers of British anthracite, and also Canadian distributors of United States anthracite coal and representative of the principal British exporting companies. Retail distributors of anthracite coal at selected points

in Ontario and Quebec were required to furnish certain information in response to a questionnaire. Mr. Gregor Barclay, K.C., of Montreal, acted as counsel in the case, on appointment by the Minister of Justice. The books of the principal Canadian importers of British anthracite coal were examined for the purposes of the inquiry by Arthur A. Crawley and Company, chartered accountants. The report of the Registrar was made to the Minister of Labour on April 22.

The Registrar's report was not made public, and the report and evidence was referred to the Attorney-General of the Province of Quebec. On May 3 the Minister of Labour made a statement in the House of Commons regarding the investigation. The Minister's statement follows in part:

"Mr. Speaker, some days ago I intimated to the house that I had received the report of the Registrar appointed under the Combines Investigation Act with respect to less inquiry into the importation and distribution of British anthracite coal into Canada. I intimated at that time that as soon as I had an opportunity to review the report I would make a statement to the House. The inquiry

was set in motion by reason of a complaint made by a member of the other chamber, and was not instituted, as is usually the case, by reason of a complaint having been made by the requisite number of consumers or others interested.

"At any rate, I instructed the Registrar to make an investigation or an inquiry, as the Act provides. That was done, and a great deal of evidence was taken in connection with the matter. As I indicated to the House a few days ago, the practice, and in my view a very proper one, has been not to make public the findings in inquiries under the Act into business concerns. The reason of course must be obvious, namely, that if it is found after inquiry that the provisions of the Act have not been invaded, then it would be highly improper that the business of anyone be made known to his competitors and others. On the other hand, if it is found that the business under inquiry falls foul of the provisions of the Act and it is desirable to have a further review, that further review would of course be based upon the evidence secured by the Registrar or Commissioner as the case may be, and if the evidence were made public it might easily defeat the objective sought.

"The importation and distribution of British anthracite coal in this country has been a subject of interest for a number of years. Efforts have been made in the past to introduce that fuel into Canada because of the fact that the supply of that sort of fuel was being obtained entirely from outside our boundaries. Until 1929 those efforts were not efficacious for reasons that probably are fairly well known to members of this chamber. Beginning with 1929 the importation of British coals was apparently made possible, and today the importation of that fuel is very considerable. No question arises as to contracts made or understandings arrived at between the importers of British anthracite and their other foreign competitors, so in that respect the inquiry made by the Registrar is quite different from the usual inquiry made into matters arising under the Act. The question that does arise is whether or not in the formation of the organization that is distributing the British anthracite in Canada those engaged have complied with the terms of the Act. Many questions of law are involved. The Registrar's report indicates that the importers' net profit for the four years, 1929 to 1932 inclusive, ranged from 39 cents a ton to 64 cents a ton. The Registrar also finds that there has not been a contraction of that profit in the same ratio as retailers' profits and matters of that character. He has concluded, however, that the arrangements perfected by the

importers of British anthracite coal do not in his view conform to what is contemplated by the Combines Investigation Act. Therefore, there being, as I have indicated, questions of law involved that are difficult of determination, I have decided that I will refer the matter to the appropriate authorities in the province or provinces affected, to take whatever action they think desirable in the light of the Registrar's report, the evidence, and the exhibits upon which it is founded; and further review of the matter by this chamber probably will not be necessary."

### Other Inquiries

The commencement of a preliminary inquiry under the Combines Investigation Act into an alleged combine of coal dealers in Winnipeg and other points in western Canada was reported in the LABOUR GAZETTE, December, 1932, page 1258. This preliminary inquiry was completed in February.

An investigation into an alleged combine of buyers of Ontario-grown tobacco, also reported in the LABOUR GAZETTE, December, 1932, was completed in March, when a report was made to the Minister that no contravention of the Combines Investigation Act had been found.

### Recent Immigration into Canada

The Department of Immigration and Colonization has issued figures showing the immigration to Canada for the fiscal year ended March 31, 1933, and for the first quarter of the present calendar year, with some comparative figures for the corresponding previous periods. The total number of immigrants entering Canada during the last fiscal year was 19,782. Of these 5,135 were adult males, 7,053 were adult females and 7,594 were children, i.e. under eighteen years of age. A total of 3,097 were of British origin, 13,196 were from the United States, 840 were of Northern European races and 2,649 of other races. Total immigration for the fiscal year ended March 31, 1932, was 25,752.

During the first quarter of the present calendar year there were 2,735 immigrants. Adult males numbered 750, adult females 1,031 and children 954. A total of 291 were of British origin, 1,799 were from the United States, 91 were of Northern European races and 554 of other races. Total immigration during the first quarter of 1932 was 3,544.

The figures for total immigration are published each month in the LABOUR GAZETTE in a table in the General Review of the Industrial Situation.

## OLD AGE PENSIONS IN CANADA

### Financial Summary of Administration during First Quarter of 1933

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156; as amended by statutes of 1931, chapter 42) and the various provincial concurrent Acts, during the fourth quarter of 1932, and since these Acts became severally effective. Similar information bringing the statistics down to December 31, 1932, was given in the LABOUR GAZETTE, February, 1933. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. The Act made provision for the establishment of a Dominion-Provincial pension system to be effective in such provinces as might enact and give effect to special legislation for this purpose. The provinces now participating in Old Age Pensions are British Columbia, Alberta, Saskatche-

wan, Manitoba, and Ontario. The Northwest Territories are also within the scheme. The Province of Prince Edward Island will participate as from June 1, 1933, in accordance with a recent proclamation giving effect to an Act passed by the provincial legislature in 1931. The New Brunswick legislature passed an Old Age Pensions Act at its session in 1930, to become effective on its proclamation by the Lieutenant Governor in Council; while in Nova Scotia an Act providing for the participation of that province in any federal scheme was passed at the session of 1931, to take effect on proclamation.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as \$365 a year and who has

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT MARCH 31, 1933

|   | Alberta                    | British Columbia            | Manitoba                    | Ontario                    | Saskatchewan              | Northwest Territories               | Totals          |

| Dominion Government's share of expenditure.....   | \$827,805 91               | \$1,176,230 25              | \$1,362,127 45              | \$6,827,955 49             | \$1,316,956 68            | \$1,477 41                          | \$11,512,553 19 |
| Total amount of pensions paid by Province since inception of Old Age Pensions Act to March 31, 1933.....                      | \$2,958,376 73             | \$6,262,567 61              | \$6,375,943 41              | \$27,420,600 49            | \$5,982,375 11            | \$5,140 96                          | \$49,005,004 31 |
| Dominion Government's share of expenditure.....   | \$1,855,890 74             | \$3,678,456 46              | \$3,812,600 89              | \$16,740,562 23            | \$3,611,766 64            | \$5,140 96                          | \$29,704,417 92 |

resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is \$240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds \$125 a year; and in cases where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in a province where the Act is not in force, the pension payable is reduced by the same proportion as the duration of the pensioner's residence in these provinces bears to twenty years. The administration of old age pensions is entrusted to the authorities ap-

pointed by the respective provincial governments.

Under the provisions of the Act as it was first passed the Department of Labour of Canada paid quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty per cent to seventy-five per cent of the total expenditure, effective from November 1, 1931. Accordingly new agreements were made between the Dominion and Provincial Governments under the provisions of the amending Act (LABOUR GAZETTE, May, 1932, page 517). That issue also contained the text of the Old Age Pensions regulations, as revised.

## LABOUR LEGISLATION IN BRITISH COLUMBIA

THE following is a brief summary of the labour legislation enacted during the recent session of the British Columbia Legislature which opened on February 23 and closed on April 7, 1933.

### Unemployment Relief

The Unemployment Relief Act, 1933, validates agreements between the province and the Dominion on the one hand, and the province and the municipalities on the other, for purposes of unemployment relief. The Lieutenant-Governor in Council is empowered to make further agreements; to contribute to municipalities the proportion of the cost of relief measures agreed upon; to advance by way of loan to any municipality such moneys as the latter is empowered by the Act to borrow; and, either alone or in conjunction with the Dominion Government and the municipalities, to institute such measures for the relief of the needy as may be necessary or advisable. The Lieutenant-Governor in Council is also authorized to make provision for borrowing money for relief purposes from the Dominion on the security of treasury bills. The schedule to the Act contains an agreement between the Dominion and the province for the purpose of settling on the land certain selected families who are residents of Canada and who would otherwise be in receipt of direct relief. The cost is to be borne from relief moneys and contributed by the Dominion, the province, and the municipality concerned, the Dominion contributing one-third of an amount not exceeding \$600 per family, and the province and municipality giving the other two-thirds in a proportion to

be agreed upon between them. The province is to be responsible for the administration of land settlement and must set up an advisory committee upon which are included representatives of the Dominion Land Settlement Branch and of the Colonization Departments of the Canadian National and the Canadian Pacific Railways.

### Coal Mines Regulation

The section of the Coal Mines Regulation Act which required the inspector to report dangerous conditions by reason of the approach of workings to old or abandoned workings was replaced by a new section. This provides that where the workings in a mine are approaching any old or abandoned workings, the owner, agent, or manager in charge of the present workings shall report the circumstances in writing to the inspector before the present workings reach within three hundred feet of the abandoned workings and no work shall be done within three hundred feet of the abandoned workings until a definite method of proceeding has been approved by the inspector. The section does not apply to cases where the abandoned workings can be readily examined and a knowledge of prevailing conditions readily obtained.

### Licensing of Chauffeurs

The Motor Vehicle Act was amended with respect to the section requiring a chauffeur in charge of a motor vehicle carrying passengers for hire to have a permit from the chief of police of the municipality. The chief of police is now empowered to cancel the permit if he deems the holder to be unfit to act as chauffeur.

feur. In such case he must send within twenty-four hours a written notice, stating the grounds of cancellation, to the holder of the permit, who may then appeal to the council of the municipality. A licensee who is engaged in operating a motor vehicle for a fire department is exempted from carrying his licence on condition that it is kept at the fire station. Chauffeurs' licences issued for the year 1933 are extended to midnight on February 28, 1934.

### Licensing of Salesmen

The Insurance Act was amended to require insurance agents and salesmen to be licensed. Certain exceptions are made, however, including any person acting on behalf of a society which makes contracts of life, accident or sickness insurance unless the superintendent of insurance notifies him and the society to the contrary.

## THIRTY HOUR WEEK LEGISLATION IN UNITED STATES

THE "Thirty-hour week" bill, introduced recently by Senator H. L. Black in the United States Senate was noted in the *LABOUR GAZETTE*, March, 1933, page 254. This Bill was passed by the Senate in April by 53 votes to 30. It was then transmitted to the House of Representatives and referred to the Committee on Labour, of which Congressman William P. Connery is chairman. Members of the committee had been informed by Secretary of Labour Frances Perkins that President Roosevelt approved the Black bill in principle, but felt that it should be amended in certain directions. At the suggestion of the committee, Miss Perkins then redrafted the bill so as to conform to the views of the administration. In the amendments drafted by the Secretary of Labour thirty hours remain as the limit of the standard working week, but the provision is added that the Secretary may grant permission to any establishment to work its employees up to 8 hours a day for 10 weeks in a single year.

In giving evidence before the Committee on Labour the Secretary of Labour stated that the bill was intended to end the recent great shrinkage in the volume of interstate commerce, as shown, for example, by the 50 per cent decline in car loadings since 1929. The key to business recovery, she pointed out, was increased purchasing power. She described the bill as a "compulsory form of the share-the-work movement," but declared that spreading the work would not solve the problem of increasing purchasing power. For this reason, a provision was placed in the bill for industrial boards which would fix minimum wages for plants or industries where wages were below a fair and reasonable value of services or a reasonable standard of living.

The Secretary said she declined to accept the responsibility for exempting some industries, as suggested in the early draft of the Bill, and proposed instead that this power be given to a board, which would allow ten weeks of overtime operation, but not more

than forty hours a week. This was devised, she said, "to put the lid on overtime." Since the six-hour-day bill was designed to apply to all labour, Secretary Perkins favoured having the minimum wage provision also apply to all labour, so as to "put a bottom to the fall of wages." Minimum wages would be determined by boards set up when it appeared to the Secretary of Labour that wages in an industry or plant were below the fair value of service rendered or below a fair living standard.

According to Miss Perkins, many manufacturers saw the need for limiting the hours of labour, but argued that employers in States where night work of women was prohibited would be at a disadvantage if employers in other States where such laws did not prevail were permitted to work women four six-hour shifts a day. They feared, for instance, that Southern mills would be allowed to pre-empt the textile market, while Northern mills would have to shut down. Therefore, she continued, President Roosevelt was asked by these manufacturers to consider some way of curtailing hours of labour in plants when it was shown that excessively long hours of operation had unbalanced production. To meet this point, the bill empowered the Secretary of Labour to limit hours of work so that a more equitable production might be brought about within an industry.

The text of the Black bill as it passed the Senate was as follows:—

*AN ACT to prevent interstate commerce in certain commodities and articles produced or manufactured in industrial activities in which persons are employed more than five days per week or six hours per day.*

Whereas there now exists a grave national emergency, affecting the lives and happiness of the people of the nation; and whereas there are millions of people in the United States out of employment, destitute and living on public and private charity; and whereas these conditions of unemployment and destitution and want are seriously impairing the health, morals, physical strength, and development of the men, women,

and children of the entire nation; and whereas the emergency has brought about conditions injuriously affecting the trade between the peoples of the various States, that business is stagnant, unemployment, undernourishment, destitution, and want have been steadily increasing; and whereas while millions of citizens, ready and able to work, cannot secure the opportunity to do so, while millions of others are working in factories and industrial establishments ten, twelve, thirteen, fourteen, and even sixteen hours per day, producing goods shipped and used in interstate commerce, to the detriment of the whole people of the United States, and thereby burdening, injuring, and destructively affecting commerce among the people of the several States, and with foreign nations: Now, therefore be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that no article or commodity except milk and/or its products shall be shipped, transported, or delivered in interstate or foreign commerce, which was produced or manufactured in any mine, quarry, mill, cannery, workshop, factory, or manufacturing establishment situated in the United States, in which any person, except officers, executives, and superintendents, and their personal and immediate clerical assistants, was employed or permitted to work more than five days in any week or more than six hours in any day: Provided, that this section shall not apply to commodities which a cannery or

manufacturing plant produces by canning or preparing for marketing or commerce fish, sea food, fruits, or vegetables of a perishable character: Provided further, that upon the submission of satisfactory proof of the existence of special conditions in any other industry included herein, making it necessary for certain persons to work more time than herein provided, the Secretary of Labour may issue an exemption permit in respect to such persons, relieving the commodity from the provisions of this Act. Newspapers and periodicals are not included in the description of the business activities herein designated.

Sec. 2. Any person who ships, transports, or delivers, or causes to be shipped, transported, or delivered in interstate commerce, any commodities or articles contrary to the provisions of section 1 of this Act, shall be punished by a fine of not less than \$200 or by imprisonment for not more than three months, or by both such fine and imprisonment, in the discretion of the court.

Sec. 3. This Act shall not become effective until thirty days after the date of its enactment, and it shall not apply to commodities or articles produced or manufactured prior to the date it becomes effective; and this Act shall remain in force for two years after the date it becomes effective. Nothing in this Act shall apply to agricultural or farm products processed for first sale by the original producer.

## ANNUAL REPORT OF ONTARIO DEPARTMENT OF LABOUR

THE thirteenth annual report of the Ontario Department of Labour contains a review of the administration of the various legislative enactments under its jurisdiction during the fiscal year ending October 31, 1932. These Acts are: The Sanitary and Hoisting Engineers' Act; The Factory Shop and Office Building Act; The Employment Agencies Act; The Steam Boiler Act; and the Apprenticeship Act. Detailed reference is also made to the activities of the Ontario government offices of the Employment Service of Canada.

The report refers to the generally unfavourable industrial conditions prevailing in Ontario in 1931, which were more pronounced in 1932. Building trades suffered a decrease of 55.8 per cent in the value of permits issued, and faced a prospect of only 10 per cent of normal operations; many contractors were forced into liquidation; while in the clothing trades, the demand for cheap clothing "has resulted in buyers arbitrarily setting a price on garments which forces the manufacturer to sell at a loss." In certain furniture manufacturing plants, "skilled men were working for less than the minimum wage ratio for girls" and "complaints are frequently received from men and boys in various other occupations who are working for wages which do not cover the cost of board and lodging." It is stated that a few employers "anxious to main-

tain at least a living wage for their employees have requested that the Minimum Wage Act be applied to men and boys. They claim that unless competitors are compelled to pay minimum rates, they must either close their factories or adopt the vicious practice of lowering wage rates to meet competition and operate the plants only as orders are received."

"Stability and prosperity in industry," the deputy minister points out, "can be achieved only when all parties concerned work together and are prepared to make sacrifices for the common welfare. It would seem that, apart from whatever efforts may be made to revive international trade and adjust monetary systems, some attempt must be made to organize industries for co-operative action designed to provide more employment. If additional work cannot be created, it is evident that shorter working hours with at least a living wage and a wider distribution of available work must be brought about if the burden of unemployment relief is to be kept within bounds. The time has come when industry should cease to regard labour merely as a commodity and should fully recognize the interdependence of all groups participating in the production of industrial wealth. The practice of discharging employees as soon as their labour ceases to be profitable is no longer justifiable. If this practice is continued, thereby transferring the bur-

den of unemployment to the State, the resulting increases in taxation will undoubtedly react to the further disadvantage of industry and the community at large. . . . Despite increasing unemployment and generally unfavourable conditions, a spirit of hope and unfailing confidence in the future pervades all ranks of industrial workers. Everyone is assured of the necessities of life and it is felt that a turn for the better will come soon. Industrial leaders have ceased to look for prosperity just around the corner, and there is a growing determination to face facts and take steps to adjust the industrial system to new conditions."

*Unemployment Relief Expenditure.*—Expenditures of the Ontario Government on unemployment relief during the past fiscal year amounted to approximately \$14,000,000 of which about one-half was spent on work relief, mostly in the nature of highway construction and aid to municipal public works. The expenditures from the Provincial Treasury on this account during the previous year were less than \$5,000,000. It was stated that the rapid increase in the cost of this work, together with the necessity for rigid economy has brought about a change in policy, so that during the current year practically all relief expenditures will be confined to assisting the municipalities in providing direct relief to those unemployed persons who require assistance for the maintenance of life.

*Employment Service.*—During the fiscal year 1932 the placements made by the Ontario offices of the Employment Service of Canada totalled 181,533, of which 131,220 were for work of a casual nature, that is for work lasting not more than seven days, and 50,313 were for regular employment. The vacancies reported numbered 188,264 and the applications 317,514. The fact that over 72 per cent of the number of placements were casual is attributed to the system of rotation of workers on the various relief schemes undertaken by the province and by municipalities. For every 100 applications there were approximately 59 vacancies and 57 placements, as compared with 62 vacancies and 65 placements in 1931.

An additional duty was assigned to the Ontario officers of the Employment Service during the year. In the program of establishing road building camps in Northern Ontario, the provincial employment offices were called upon to transfer workers from their homes. This work necessitated the completion of all arrangements respecting transportation and feeding en route. Then, in the construction of the new highway (undertaken as a relief work) through the counties of Hastings, Lennox and Addington, Frontenac, and Lanark, the em-

ployment offices at the request of the Department of Highways took complete control of the placement of labour.

During the concluding month of the fiscal year, the Ontario Government Offices of the Employment Service of Canada were requested by the Department of National Defence to cooperate in the selection and transfer of men to thirteen airport clearing projects in Ontario. With the exception of a few placements at Rockcliffe and Trenton Airports this movement was not under way at the close of the fiscal year.

In the report of the general superintendent of the Ontario offices, reference is made to the survey of the provincial Unemployment Research Committee, which was reviewed in the LABOUR GAZETTE for September, 1932, page 967.

*Private Employment Agencies.*—There were fifteen private employment agencies operating under licence in the province of Ontario last year, but this number was reduced on July 1, when two of the existing licensees failed to make application for renewal. Three of these agencies are conducted exclusively as nurses' registries in Toronto.

*Factory Inspection.*—The report of the Factory Inspection Branch, which has been in operation for 46 years, indicated greater activity on the part of the inspectors to ensure proper standards of working conditions in the province. Altogether 23,148 inspections and revisits were made, being 1,209 more than the previous year. There was also an increase of 536 in the number of establishments visited, making a total of 14,830 plants which reported 270,102 employees on the pay rolls.

Fewer permits were considered necessary during the year, 1,345 being granted, as compared with 2,031 the previous year. Thirty-one of these permits were granted under the new section 33 of The Factory, Shop and Office Building Act, permitting the employment of a double shift of eight hours each for female workers and youths in factories.

It was explained that amendments to the Act during the year were practically all of a social nature and "have found favour in most circles, particularly among those for whose benefit they were framed to alleviate present conditions." Another such change in the Act extended the closing hours of restaurants and suburban shops and certain classes of business.

The orders issued relating to various requirements of the Act totalled 4,986—49 less than in 1931.

The accompanying tables indicate the number of employees by sex and age in industrial and mercantile establishments and office build-

ings, together with hours of work during 1931-32:

NUMBER OF EMPLOYEES IN ONTARIO FACTORIES

| Employees                        | 1931    | 1932    |
|----------------------------------|---------|---------|
| Males, over 16 years.....        | 228,627 | 183,103 |
| Males, 14-16 years.....          | 113     | 8       |
| Females, over 18 years.....      | 94,986  | 86,900  |
| Females, 14-18 years.....        | 1,062   | 86      |
| Total.....                       | 325,328 | 270,102 |
| Children under 14 dismissed..... | 1       | 14      |

HOURS OF LABOUR IN ONTARIO FACTORIES

|                        | Number of Employees |
|------------------------|---------------------|
| Males                  |                     |
| 45 hours per week..... | 100,748             |
| 50 hours per week..... | 30,981              |
| 54 hours per week..... | 15,418              |
| 58 hours per week..... | 1,878               |
| 60 hours per week..... | 14,213              |
| Females                |                     |
| 45 hours per week..... | 52,386              |
| 50 hours per week..... | 60,010              |
| 54 hours per week..... | 5,766               |
| 58 hours per week..... | 844                 |
| 60 hours per week..... | 3,308               |

There were also 28,550 employees, male and female, working approximately 50 hours per week. The great majority of the complaints received by the Factories Inspection Branch concerned hours of labour. Fourteen cases of child labour were found and these were promptly remedied. Violations of the Acts in the enforcement of which inspectors have a responsibility were submitted as follows: Operating Engineers Act, 13; Adolescent School Attendance Act, 4; Minimum Wage Act, 900; Steam Boiler Act, 1.

*Accidents and Safety Measures.*—The number of accidents reported to the Factory Inspection Branch during the year was 1,504 as compared with 3,256 in 1931. These included 35 fatalities of which four resulted from explosions. Of the total accidents, the greatest single factors of causation were falling substances, 356—and falls, 272. The greatest number of accidents occurred in the metal trades with 772, followed by the pulp and paper trades with 502. Dealing with the causes of accidents the chief factory inspector states:

"Perhaps the most persistently recurring type of accident is due to falls or falling objects. Year after year these cause more accidents than any other single classification, and the large majority of them could be averted. Wet and slippery floors, objects lying in passageways, ladders inefficiently repaired,

worn and broken treads on stairs, no handrails on stairs, these are the agencies responsible for most of the falls. Improperly stacked or piled goods or materials, wrenches left on overhead beams after a shaft repair job, or dislodging an object in a pile without first taking the necessary precautions make hospital cases of many men each year. From this list it is apparent that good house-keeping and safety consciousness would wipe out these classifications from the accident records, and 25 per cent of the accidents with them. Because of their simplicity and the fact that possibly half a dozen such situations might be seen to exist in one plant and their hazard not realized or heeded by the foreman or superintendent, it is frequently difficult for our inspector to get immediate action until the occurrence of an accident forcibly brings to them this realization of the hazard."

The factory inspectors made special enquiries regarding safety committees or other forms of safety organization in operation in the various industrial firms inspected, and reported on 56 such safety organizations. The activities of the safety engineer were also reviewed.

During the past year a considerable amount of tunnel and caisson work was done throughout the province with very satisfactory results as regards sickness and accidents. It was considered that the regulations respecting the protection of persons working in compressed air, tunnels, or open caissons have helped materially both workers and contractors on work of this nature, especially where the use of compressed air is involved.

*Boiler Inspection.*—According to the twentieth annual report of the Boiler Inspection Branch, 311 designs of steam boilers, air receivers and other pressure vessels constructed for use in the province were certified, registered or re-registered, as compared with 401 the previous year, and fifty-five such designs were returned to the manufacturers for revision. The number of inspections for new pressure vessels totalled 303 first, 138 second, and 243 final inspections, and 1,240 first and 196 final inspections were made of used pressure vessels. Of this number, 779 were annual inspections of boilers and pressure vessels which were inspected by request, although not coming within the jurisdiction of The Steam Boiler Act. This is an increase of thirty-four over the previous year. Investigations of nine explosions were made by the Boiler Inspection Branch during the year. The total amount of moneys transmitted to the Treasurer was \$12,623.66, as compared with \$16,012.20 in 1931.

*Operating Engineers.*—The Board of Examiners of Operating Engineers reported 17,505

certificates issued during the fiscal year, as compared with 18,200 in 1931. Of this number, 1,429 were issued upon examination or re-examination, 11 were provisional, 12 were duplicates, 151 were plant registration certificates, and 15,902 were renewals.

The number of candidates examined during the year totalled 1,717, as compared with 2,198 the previous year. Of this number, 765 were examined at the Toronto office and 952 at outside centres where 83 examination sessions were held. The candidates for examination were divided as follows. 857 for fourth-class certificates, 404 for third, 169 for second, 42 for first, 122 for hoisting, 74 for traction, and 49 for firemen's certificates. The net revenue for the year amounted to \$25,383.11 as compared with \$25,890.97 in 1931.

*Apprenticeship Branch.*—The report includes a summary of the administration of The Apprenticeship Act. This work was faced with serious problems due to the decline in building industry. "The difficulty" the deputy minister states, "of finding employers for boys seeking to be indentured in the designated trades resulted in a decrease in the number of new registrations for the year, the total being 86, as compared with 142 in 1931. Many employers were unable to provide apprentices already indentured with steady employment, or could have done so only by laying off old employees, married men with families, whom they felt had the first claim to any work available. Fewer cancellations were reported, the number being 27, as compared with 50 the previous year and completions numbered 263, as compared with 230. At the end of the year there were 826 active contracts, as compared with 1,030 at the close of 1931. Day classes for the first and second year apprentices were held in Hamilton, Toronto and Ottawa during January and February with an attendance of 263, as compared with 314 the previous year. In spite of this decline excellent work was accomplished through these classes in supplementing the practical experience and training the boys received while working on the job.

"In the year 1931, 2,840 employers were assessed to the amount of \$32,852, of which over 88 per cent was collected. In 1932, assessment notices were sent to only 2,691 employers and the returns submitted showed such a decrease in the amount of pay rolls that it was decided to suspend assessment rather than impose any additional expense on employers. The necessary charges in connection with day classes in January and February, 1933, will be paid from a surplus of \$19,250 in the assessment fund.

"While depressed business conditions made it impossible to extend the work of this branch, a great deal was accomplished during the year in placing it on a more satisfactory basis. The Act and regulations were modified to meet changing conditions in the building trades. The Apprenticeship Board was established and the courses of instruction for the day classes were improved. It is anticipated, therefore, that rapid advance will be made in developing the apprenticeship scheme along lines acceptable to the construction industry when conditions improve."

### International Trade Union Library

The International Federation of Trade Unions continues the series of booklets on the History of Trade Union Movements with a new history of "Fifty Years of Trade Unionism in Switzerland," by M. Meister, secretary of the Swiss National Trade Union Centre. The booklet describes some of the characteristics of Swiss industry. One of the chief of these is the fact that there are no large industrial centres in Switzerland, the workers being widely distributed, many of them engaging also in forestry and agriculture. Special difficulties—political, economic and geographical—impeded union organization, in addition to the multiplicity of languages. The booklet describes how these obstacles were gradually overcome, until in 1929 the trade union membership reached a total of 186,700.

Other booklets in the same series are as follows: No. 1. The trade union movement in Belgium (by C. Mertens); Nos. 2-3. The trade union movement in Great Britain (by Walter H. Citrine); Nos. 4-5. Twenty-five years of international trade unions (by J. Sassenbach); No. 6. The trade union movement of Sweden (by Sigfrid Hansson); Nos. 7-8. The trade union movement of Germany (by Richard Seidel); No. 9. The trade union movement of Austria (by Eduard Straas).

The Independent Labour Party of Great Britain, at a meeting held at Derby on April 16, took action in regard to a recent invitation from the Communist International to adopt a policy of a "united front" with that body. The I.L.P., while it was in favour of a general policy of co-operation, decided by a vote of 83 to 79 against actual affiliation with the Communist body. It was considered that those in control of the Communist International were not familiar with conditions outside Russia, and that Russian policy was not applicable outside that country.

## REPORTS ON HEALTH INSURANCE IN ALBERTA AND SASKATCHEWAN

A PUBLIC system of health insurance is recommended in two reports published this year, the first by a Commission appointed by the Alberta Legislature to make recommendations "as to the best method of making adequate medical and health services available to all the people of Alberta; and the second by a committee on the same subject appointed by the Saskatchewan Provincial

Medical Association. (The report of the British Columbia Commission on State Health Insurance and Maternity Benefits was outlined in the *LABOUR GAZETTE*, May, 1932, page 521; and the report of the Quebec Social Insurance Commission dealing with Sickness and Disability Insurance was summarized in the issue for February, 1933, page 165).

### "Best Method of Making Adequate Medical and Health Services Available to People of Alberta."

The resolution adopted by the Legislature of Alberta last year providing for the appointment of a commission to consider and make recommendations "as to the best method of making adequate medical and health services available to all the people of Alberta," was noted in the *LABOUR GAZETTE*, April, 1932, page 412. The Commission consisted of eight members of the Legislature, as follows: Hon. George Hoadley (chairman); G. E. Cruickshank, A. P. Mitchell, R. Hennig, W. G. Farquharson, Dr. W. A. Atkinson, Hon. Mrs. I. Parlby, and Chris. Pattinson.

The Commission state that "after reviewing the system of medical administration in operation in various parts of the world, and after careful consideration of the many phases of the question of the extension of medical and allied services, especially the actuarial phases, as they apply to this Province, they have decided that the information now available is not enough to warrant the presentation of a final report." They therefore submitted a "progress report," which contains the following findings:—

(1) Adequate medical services for all the people of Alberta can only be secured through the operation of a contributory health insurance scheme. Such a scheme would result in the carrying out of the intention of the resolution.

(2) That an ideal scheme should be presented as the ultimate objective of this Province and that any scheme of a more local nature should be so planned as to be readily adaptable to a broad general scheme—which may be Province-wide or eventually Dominion-wide in its application.

(3) That existing enabling legislation whereby municipal districts or parts thereof may organize for the provision of medical and allied services should be utilized.

The following general considerations are noted in the report:

The fundamental factor requisite for the success of any insurance scheme is the participation of a number large enough that the premiums received may be adequate to provide for current expenditures and to provide a reserve fund for emergent situations.

A suitable territorial "set-up" which will make the various purposes of this scheme possible from an economic as well as the administrative point of view must be established. With this purpose in view, the Commission recommends that the Department of Health be requested to make, without delay, a survey of the Province for hospital and other health purposes and to divide the Province into districts, so planned that existing facilities for health services may be utilized. In a province such as Alberta with a large proportion of the population engaged in farming, such a survey should provide for the mapping of the province into hospital districts and health districts and it is considered that an organization comprising units similar to the proposed enlarged municipal units should be established as the administrative basis for the rural parts of the Province. These districts would include some six or eight municipal districts and might include the villages, towns and possibly the smaller cities within their boundaries. For the larger cities, a system whereby the administrative units would be developed around groups engaged in the same or similar occupations, similar trades, similar professions, industrial enterprises, et cetera, should be established. In both systems the administrative unit should be large enough to allow for economic administration and not so large as to lose that sense of local responsibility so necessary for the successful operation of any scheme.

The commission consider that any system to be successful should be compulsory after the above-mentioned health unit has expressed its desire to come under the scheme. Adjust-

ments to suit local circumstances, such as exist where groups already have a health insurance scheme or a hospital service, will be desirable in some instances. However, it is considered that every service included under the scheme must be directly subject to the control of and responsible to the governing body in charge of the scheme, and that no factor other than the type of service available should be given consideration in making such adjustments.

Health insurance must provide for a specified period only. The period must bear a direct ratio to the length of time an individual has been contributing to the scheme, otherwise, in its early stages, the financial structure of the scheme probably would not be equal to the strain of the cost of treating the accumulated chronic cases that would be presented for treatment. A maximum of a stated period (say twenty-six weeks) during which the insured is entitled to what may be termed active hospitalization, should be established except for certain types of sickness that may require more prolonged treatment in a general hospital. For chronic and incurable diseases a system of invalidity insurance should

be established and institutions for such cases should be provided. Separate health insurance and invalidity funds should be maintained.

The Commission discusses the proper distribution of contributions as between employees and employers; between municipalities and the state, etc. The benefits would include the following service in addition to cash: (1) general medical service; (2) specialized service; (3) hospital and laboratory service; (4) dental service; (5) prescribed medicines; and (6) a preventive medical service.

The commission recommends that a state fund, centrally controlled and administered by a state Board, be established. It further recommends that local advisory committees be established for each unit.

The report presents details of a plan for the municipalization of medical and allied services. In this connection the form of agreement now in force between the village of Hillsborough and the local physician is cited as typical.

The Commissioners were assisted in their work by the International Labour Office (Geneva), the British Medical Association, and by the Provinces of British Columbia and Manitoba.

### Recommendations of Saskatchewan Provincial Medical Association

The Saskatchewan Provincial Medical Association recently appointed a committee, with Dr. S. E. Moore as chairman, to study the possibilities of a system of health insurance in the Province. The committee believe that a scheme of health insurance for Saskatchewan is quite feasible but that its success would necessarily depend upon the co-operation of all parties concerned. They recommend that the Association should approach the various social organizations in the Province with a view to the holding of a conference of all the organizations who are, or may become, interested in the provisions of adequate medical care to the people of the Province at as reasonable a cost as possible, for the purpose of discussing the subject with them and if possible obtaining their approval; and that, provided this joint conference approves, a joint committee consisting of representatives of the Association and representatives of the joint conference be constituted for the purpose of taking the preliminary steps towards organization of the executive body which it will be necessary to establish for the purpose of carrying the scheme into effect.

The committee submit the following principles, which are amplified in their report.

(1) Patients should have the right to exercise their choice of a physician wherever two or more physicians are available.

(2) From the medical standpoint, the family physician should be the centre of any success-

ful plan and the specialist should be secondary but readily at the call of the family doctor. This would apply also to the consultant who should be available when called by the physician.

(3) The physician should not be on salary, but should be paid by the fees agreed upon by the medical profession and the Health Insurance Commission, and thus be paid for the work actually done.

(4) No "patch-work" system should be adopted but should cover the whole province and give service to all those with minimum incomes including the rural population.

(5) The system should provide the greatest possible incentives for the profession to do post-graduate work and thus keep up with the current of proved knowledge.

(6) Any plan at the present time should not embody the principle of financial compensation for time lost through illness.

(7) Definite and well recognized precautions should be taken to prevent excessive costs to the community through hospitalization and medical treatment of malingers.

(8) Preventive medicine with all that it includes should be a prominent feature of any health insurance scheme.

(9) The scheme should be contributory and compulsory.

(10) As members of the medical profession we are particularly interested to demand that

the existing relations between doctor and patient should be maintained, that the ethics of "professional secrecy" should be respected, and that "freedom of prescribing" with agreed restrictions should be provided for.

(11) That in arbitration of any disputed point as between the contracting parties, viz.: qualification of practitioner, fees, duration of illness, etc. the medical profession should be represented by the province of Saskatchewan Medical Association either directly or through a regularly appointed committee.

The committee, in their report, note the schemes of social insurance and medical services in effect in Great Britain and other countries. Use is also made of the recent extensive report of the United States "Committee on the Cost of Medical Care" (LABOUR GAZETTE, February, 1933, page 168); and of the reports of the Commission in British Columbia, Alberta, and Quebec.

The committee notes that at present 45 accident and insurance companies operate in Saskatchewan, net premiums amounting to \$289,068, the net losses incurred amounting to

62.09 per cent. "This in itself shows that the individual is thinking of health insurance, and the companies concerned making an extraordinary large amount for their services; \$100,000 leaves this province annually."

Further, the cost of hospitals in the Province is placed at \$2,738,475 and that of Sanatoria at \$780,317. At present 11.7 per cent of the rural population of Saskatchewan is under the municipal doctor scheme, the cost *per capita* being estimated at \$2.30, or \$11.50 for a family of five. It is estimated that under a general provincial scheme of insurance the total cost for sickness in an average municipality including doctor's salary, drugs, necessary hospitalization, surgery and tuberculosis levy will be about \$12,280, which would be about \$6.27 *per capita* or \$30.35 *per family*. The cost *per quarter section* would be about 1½ mills.

The report calls attention to the close connection between the question of unemployment and health, and expresses the hope "that the Federal Government might be prevailed upon to arrange in its relationship to the Unemployment Insurance an interlocking Health Insurance for the people."

### Public Health Nursing in New Brunswick

The fifteenth annual report of the chief medical officer of New Brunswick for 1932 states that the public health nursing services was continued during the year in spite of increasing difficulty found by local organizations in raising funds. The director of this work, in her annual statement, says: "Many of the nurses have laboured in the face of the most discouraging conditions and circumstances, to which was added the disheartening effect of seeing from year to year little change, if any, in the infant death-rate. It is then, with considerable gratification, that a new low level in infant deaths is recorded for 1931—87.4 *per thousand*. This was hardly to be expected in the face of increasing unemployment with its resultant deprivations, especially in those districts where living standards are already deplorably low. This new low rate seems to be in keeping with the excellent general showing in the whole public health field.

"All public health nurses, especially in the smaller places, have found it necessary to spend increasingly more time than heretofore on purely social services, especially the securing of material relief for families.

"The pressure of economic conditions has led to retrenchment of public expenditures in nearly every quarter, and we can look to the immediate future with little hope of expansion of health services. With a public health nursing service far inadequate to the actual needs of the province, we have, nevertheless, been able to show results. It is, therefore, to be profoundly hoped that, especially at this time, the wisdom of maintaining this ground, gained at considerable cost of time and money through the pioneering years of public health (which we are scarcely beyond) will prevail and prohibit further reductions in a service of proven worth to the welfare of the people."

### Child Welfare in Nova Scotia

The annual report of the Director of Child welfare of Nova Scotia for the period ending September 30, 1932, describes the numerous child welfare activities, supported both by public funds and by private philanthropy, on behalf of needy and under privileged boys and girls in the province. Apart from reformatory

institutions there are in Nova Scotia eleven children's homes and shelters, having in all 550 inmates at an annual maintenance cost of \$106,822 of which nearly half is paid from public funds. The Provincial Treasury expended over \$61,000 in the Department of Neglected Children and \$22,491.34 for the

maintenance of Juvenile Delinquents; and in addition to these amounts a sum not less than \$135,000 has been expended by the various municipalities of the Province as their proportion for the maintenance of Neglected and Delinquent Children during the past year. Mothers' Allowances, which are essentially public aid towards the maintenance of needy children, cost the Public Treasury last year \$348,161.

In addition to all these institutions and agencies there are a large number of organizations and private persons expending sums ranging from a few dollars to several thousands annually. The various Service

Clubs, Playgrounds Association and many Church Societies are rendering valuable aid to needy and under-privileged children: while the Junior Red Cross, the Children's Hospital, the Mental Hygiene Society, the Society for Crippled Children and similar agencies are concerned with the physical and mental health of children. "Through the unselfish efforts of these workers and agencies," it is stated, "the Province has been considerably enriched by better health and higher moral standards of its future citizens. It is well for Municipal and Provincial officials and the public generally to realize how valuable to the State this work is."

## REPORT ON UNEMPLOYMENT INSURANCE BY MONTREAL COUNCIL OF SOCIAL AGENCIES

A SPECIAL committee appointed by the Montreal Council of Social Agencies to study the subject of unemployment insurance recently presented their report. This report was printed as a supplement to the March issue of *Child and Family Welfare*, the journal of the Canadian Council on Child and Family Welfare. The special committee was composed of the following members:—Mr. G. B. Clarke (chairman); Mr. C. P. Cosgrave; Mr. P. S. Fisher; Professor L. C. Marsh; Rev. David McLennan; Mr. R. W. Steele; Dr. F. G. Pedley; and Mr. L. St. J. Haskell (secretary).

The following paragraphs give a summary of the conclusions reached in the report:

### Summary of Report and Recommendations

The main points which should receive emphasis in the consideration of unemployment insurance, and the main features of the scheme recommended herein, are summarized below. The detailed discussion of these points and the reasoning on which the recommendations are based is to be found in the sections which follow.

1. The maintenance of at least minimum standards for unemployed workers is a basic need, in the interests not only of individuals and their families, but of the community at large.

2. Unemployment insurance is designed not to take care of all relief problems, but to provide a means of stabilizing income against the fluctuations of the labour market for a major group of normal wage-earners.

The scope of a scheme may be wide or limited, but whatever its form, the need for adequate organization for the relief of destitution, for other problems of distress, and for abnormally prolonged unemployment, remains.

3. Unemployment insurance is called for because unemployment is a permanent risk of modern industry, not a risk confined to periods of trade depression alone. Moreover, while unemployment may be reduced by planning and management directed towards stabilization on the part of industrial concerns themselves, the degree of unemployment prevention which is attainable from such efforts is definitely limited.

4. Direct relief provision for unemployment, as it has been in operation in the last three years, has met a very real need, particularly the financial inability of existing relief institutions to cope with the problem. The maintenance of governmental financial support is still imperative in the absence of any further measures. But current relief administration must be subjected to criticisms of considerable weight; while, without modifications, extensive reliance in the future on direct relief alone would be open to the most serious objections.

5. Employment-provision policies call for a more careful discrimination than is commonly extended to them if their value is to be adequately assessed. Similar considerations apply to the view that "work is better than relief." Current "relief works" have helped to provide relief in need, but cannot be regarded as having measured up satisfactorily to the tests of adequacy and economy.

In so far as it is possible and desirable to have work-schemes in operation, it is better to have them as distinct and separate supplements to a scheme of unemployment insurance, rather than to attempt to weld them together at the outset.

6. It is therefore recommended that a scheme of unemployment insurance, planned to meet the particular conditions of Canada

should be initiated at as early a date as possible.

7. This scheme should be compulsory upon the parties to be included in its scope if its coverage is to be in any sense comprehensive: with government participation in its administration.

8. The scheme should be co-ordinated so far as possible to operate on a Dominion-wide scale. Provincial and federal co-operation, is therefore called for, along the lines which have already been accepted in the administration of the Canadian Employment Service, or in the initiation of such legislation as that on Old Age Pensions. "Government participation" above therefore means joint provincial and federal administration.

9. The scheme should be contributory, with the maintenance of an Unemployment Reserve Fund, upon which claims could be made in accordance with prescribed eligibility rules, as its main element.

10. Employers' and employees' contributions should be regarded as the main financial basis of the fund, and are to be approved on general principle. The case for governmental contributions (other than administrative expenses), may be regarded as a more open

one, and subject to considerations of expediency.

11. Separate administrative provisions should apply as far as is practicable, to three main groups of workers (a) industrial workers, (b) seasonal, and mobile workers (other than agricultural workers) and (c) agricultural workers.

12. The maintenance of sound eligibility rules and maximum-benefit limits (subject to review of their adequacy) is essential to the success of the scheme.

13. Special attention should be given to all means whether in the assessment of the employers contributions, or in administrative co-operation, by which incentives towards the stabilization of employment can be provided.

14. It is highly desirable that extensions and improvements of the work of the Employment Exchanges should be visualized as an essential part of the task of initiating the unemployment insurance scheme.

15. Finally, it is to be emphasized that the existence of unemployment insurance must not be allowed to obscure the continuous need for more fundamental measures designed to attack the underlying causes of unemployment and economic maladjustment.

### Effect of Depression on Employee Stock Ownership

Few plans of employee stock ownership have so far been successful, and "both employers and employees have lost more from the movement as a whole than has been gained in improved morale and dollars saved." This conclusion is reached in a study of "Employee Stock Ownership and the Depression" (Industrial Relations Section, Princeton University). Studies of various company plans by the same investigators were noted in the *LABOUR GAZETTE*, July, 1932, page 779. The present study was made into fifty typical plans in order to ascertain how they had withstood the sharp decline in stock prices, employment and earnings since 1929. Most of the plans described were started before 1926, but the seven-year cycle 1926-1932 was used for the purpose of the inquiry. It is premised that "any program which concerns so directly the financial interests of wage-earners must stand the test of the extremes of prosperity and depression regardless of the success which might have occurred in a decade of stable business." Most of the schemes that were studied failed to meet this test: "the record of the past seven years casts grave doubts upon the justification of the general movement for the sale of stock to employees, however well some plans may have stood the

test. The prices of the stocks sold under most of the 50 plans included in this study have, it has been seen, fluctuated greatly during the past seven years. From 1926 to the end of 1932, the market quotations of 35 of these stocks, as a group, fell more than 80 per cent. Inasmuch as most of them were purchased by employees at prices a few points below the market, the possibilities for loss on such investments are evident."

The purchase of stock is declared to be a questionable undertaking for the lower-paid groups of wage earners: "because of their small incomes and lack of reserves it is exceedingly difficult for them to invest on a long-term basis. Calls for money beyond the amounts in the weekly pay-envelope, and such major risks of life as sickness, accident, and unemployment frequently make it necessary for them to draw upon their savings. It was to meet such emergencies, after all, that savings were accumulated. But investment in industrial stocks cannot always be realized upon at once to advantage. When prices are low, the owner must be able to wait for an upswing in the market before selling. This the lower-paid groups of employees are in no economic position to do and the result frequently is that they are forced to sell at a

loss. Often the better-protected investor loses, too, but he has reserves from which he can meet losses and he gains more than enough the next time to compensate."

Moreover, as far as industrial relations are concerned, the company-sponsored plan may prove to be a boomerang: "The company hopes to gain, as its benefit from these plans, increased *morale* and loyalty on the part of its employees. But this cannot be brought about if the plan is responsible for losses to any considerable number or to any great degree. What was meant to be a help to employment relations may then become a drawback."

On the other hand, two special features that are found in certain employee and stock-ownership plans provide safeguards to general employee investment which seem adequate, or adequate under most circumstances. Of these, a company guarantee to repurchase employee stock at the price paid for it, is said to afford a complete protection to employee investment. It gives savings placed in such a plan the safety of savings bank deposits, assuming that neither the bank nor the plan fails. Such a guarantee is contained in only a few plans. Of the 50 on which the study was based, four

had such a guarantee, but one of these plans is no longer in effect. A second feature which affords a wide margin of protection is that of a company contribution toward the purchase price of the stock. In the opinion of the investigators this does not provide the complete guarantee of safety that the repurchase clause does, but protects employees' investment against all declines in prices which are not in excess of the company's contribution.

The report discusses the possibility of alternative plans to those that have proved inadequate in times of depression, and concludes as follows:—

"Perhaps there is no form of personnel activity by means of which the company can perform a greater service for its employees than through sound advice on their financial problems. Encouragement to build savings accumulations wherever possible and help in their wise investment are needed by all classes of employees. They will be needed particularly in the next few years, whether we reach anything resembling pre-depression prosperity or gain ground only slowly. To provide such encouragement and advice is both a responsibility and a challenge to management."

### Training for Unemployed in Great Britain

Increased efforts are being made throughout Great Britain to give men work which will maintain or improve their employability during periods of unemployment. Instructional centres for juveniles have been established by the Ministry of Labour in the majority of the industrial areas, and during the last twelve months about 150,000 juveniles have attended these centres. Moreover, 4,000 men passed through the nine training centres (in which training is given for a specific trade) and a large proportion, approximately 90 per cent, were found work. About 9,500 men passed through the transfer instructional centres, of which there are eleven; the work of these centres is regarded as reconditioning and there is less certainty of a job being found. Training of unemployed women and girls was carried on by the Central Committee for Women's Training, and during the last ten years 60,000 have passed through the female centres.

It is proposed to set up a number of base camps and hutments, attached to which will be a camp of tents. The men will be employed mainly on work for the Forestry Commission, including felling and clearing timber, excavating in stone and gravel quarries, fencing and drainage work. There will also

be one or two camps in which men will live during the week, returning to the base at week-ends. This scheme is intended to give an opportunity to men receiving unemployment pay, whether in the form of insurance benefit or transitional payments, to have for a period of about twelve weeks a course of vigorous work in the open air. The men will receive a small training allowance, unemployment pay being set off against the cost of their maintenance.

The National Council of Social Service, which centralizes voluntary activities on behalf of the unemployed, reports that an increasing number of towns and villages are making special provision for the unemployed. On March 1, 1933, there were 593 centres providing for occupational activities, as compared with 314 on February 1, and those providing for recreation increased from 446 to 618 between the same dates. The number of places providing educational facilities was 132 on March 1, as compared with 82 on February 1. The number of places which organized physical training schemes was 178, as compared with 75. Voluntary work schemes on public amenities had increased from 20 to 32.

The Ministry of Health has issued a circular to local authorities indicating the Gov-

ernment's desire to encourage the efforts which are being made, both on local initiative and with the assistance of the National Council of Social Service, to meet "the lack of occupation which forms so serious a factor in the present situation of unemployed persons, and especially of those whose unemployment has been of long duration." The circular points out that there is a large field over which local authorities are in a position to render assist-

ance to local voluntary effort and makes concrete suggestions. It suggests, for instance, that suitable surplus land may be made available for the cultivation of allotments; that premises may be provided for other forms of occupation; that technical instruction or assistance in the conduct of educational classes, physical exercises or manual employment may be provided; that tools and appliances may be lent; and that cheap transport facilities may be arranged.

## SIXTEENTH ANNUAL ONTARIO SAFETY CONVENTION

### Organized by the Industrial Accident Prevention Associations

WITH a total registration of over 1,000 delegates from all parts of Ontario, the sixteenth annual Safety Convention organized by the Industrial Accident Prevention Associations was held at the Royal York Hotel, Toronto, on April 27-28. A feature of the gathering was a very complete exhibition of safety devices and appliances, in which Government departments and many commercial firms took part.

The delegates were welcomed at the opening meeting by the President of the Associations, Mr. C. G. Cockshutt, of Brantford, who outlined the year's activities and suggested lines of action to interest more firms in accident prevention work, Mr. E. R. Complin, General Motors of Canada, Oshawa, gave the first paper, "A Safety Catechism," consisting of a carefully prepared series of questions designed to make the hearers think out safety problems to a logical conclusion.

At the annual meeting, immediately following, Mr. R. B. Morley presented the general manager's annual report, summarizing the activities of the Associations during 1932, and stressing the assistance and guidance received in their work from the Workmen's Compensation Board. Officers for 1933-34 were then elected as follows:—Mr. P. J. Wood, Canadian Bank Note Co., Ottawa, president; Mr. O. H. Shenstone, Massey-Harris Co., Toronto, first vice-president; Mr. F. H. Rutherford, B. Greening Wire Co., Hamilton, second vice-president; and Mr. W. S. Campbell, Canadian General Electric Co., Toronto, honorary treasurer.

Following the annual meeting, Mr. L. R. Palmer, of the Equitable Life Assurance Society, New York, and past president of the National Safety Council of the United States, delivered an address of "Paying Dividends through Accident Prevention," in the course of which he emphasized the fact that everybody in the community had to pay in some

way for accidents, and that therefore the benefits of successful accident prevention were shared by all.

Chairmen of the various classes were elected as follows:—Woodworkers' Accident Prevention Association, Mr. Leo Henhoeffler, Waterloo; Ceramics and Stone Safety Association, Mr. A. G. Bennett, Toronto; Metal Trades Safety Association, Mr. R. J. Hopper, Brantford; Chemical Industries Safety Association, Mr. P. J. Sinclair, Toronto; Food Products Safety Association, Mr. J. H. Carter, Toronto; Leather, Rubber and Tanners Safety Association, Mr. F. M. Kilbourn, Toronto; Textile and Allied Industries Safety Association, Mr. W. A. Behrle, Hamilton; Printing Trades Accident Prevention Association, Mr. B. G. Newton, Toronto; Steel Erectors' Safety Association, Mr. C. E. Disher, Toronto; and Construction Safety Association; Mr. H. J. Ball, Kitchener.

At the annual banquet, Mr. C. G. Cockshutt, retiring president, was in the chair, and in the course of his remarks, declaring that he spoke as a private individual and not as an officer of the Associations, he outlined a plan for unemployment insurance, under which the various provincial workmen's compensation boards would administer a fund contributed to by both employer and employee, from which unemployed workers would draw benefits until the exhaustion of the fund, after which they would fall under federal care. In case of continued employment, the amounts credited to the worker would remain on deposit and would bear interest, and he could withdraw them on retiring from active labour.

Awards were presented to the Walker Metal Products, Ltd., and Berry Brothers both of Walkerville, for having been without a lost time accident for periods exceeding five years. Mr. R. B. Morley, general manager, read greetings from sister organizations in many parts of the world.

Col. the Hon. W. H. Price, K.C., Attorney-General of Ontario, was the first speaker. He stressed the fact that an accident is a mistake, and that proper training can eradicate the tendency to make mistakes. The right place to begin such a training is in the home, and it should be continued in the school. He paid tribute to the work of the Workmen's Compensation Board and of the Accident Prevention Associations, and commended on the fact that it was divorced from politics.

Mr. E. W. Beatty, K.C. president of the Canadian Pacific Railway, said he took the invitation to the banquet as a recognition of the prominent place given to safety by the railway companies, and quoted figures showing the paucity of fatal accidents in well-organized railway transportation, comparing this condition with the appalling number of fatalities in the unorganized motor traffic on the highway, and recommending stricter control of automobile traffic. Mr. Beatty stressed the fact that safety in the railway shops was the result of organized effort, each foreman being responsible for the safety work in his department, and the importance of safe practice being brought home to the employees by rewarding the safe and disciplining the unsafe worker.

At the opening session on Friday morning, Mr. R. B. Morley introduced Mr. Arthur Gaboury, general manager and secretary of the Quebec Safety League, who conveyed hearty greetings from the sister association in the Sister Province. He said that the Quebec Association for the Prevention of Accidents has only been organized for seven months, and that just as the Quebec Workmen's Compensation Act was based on Ontario's, so their Association was based on Ontario's.

Under the chairmanship of Mr. O. H. Shennstone, Toronto, the meeting then heard reports from the four different divisions—the Ottawa-St. Lawrence division, newly organized this year; the Toronto East division; the Wentworth division, with headquarters in Hamilton, and the Essex-Kent division, with headquarters in Windsor. These divisions reported themselves as in a flourishing state, and claimed great progress had been made in the past year.

Dr. O. A. Cannon, Steel Co., of Canada, Hamilton, in a paper on "Some Points in First Aid," described the proper equipment of a first aid station, and the proper treatment in cases of fractures, shock, burns, wounds and asphyxiation, while awaiting the arrival of the doctor. He stressed the importance of a large

number of workers learning first aid, particularly the prone pressure method of artificial respiration.

Dr. Robert Janes, Toronto, spoke on "Medical Aspects of Compensation," particularly as affecting the plant which was not large enough to employ a full-time medical officer.

Mr. L. M. McDonald, Port Colborne, spoke on "The Employer's Side," covering the importance of physical examinations and the influence of home surroundings, and also dealing with malingering.

Mr. L. J. Austin and Mr. E. E. Sparrow, both of Toronto, described the methods followed by their firms in first obtaining and then maintaining a good safety record.

The luncheon on April 28 was presided over by the incoming President, Mr. P. J. Wood. Mr. Tom Moore, President of the Trades and Labour Congress of Canada, spoke on "Keeping up Interest in Safety Work." When accident prevention work was taken up at Geneva, he said, two bodies were looked to for guidance—the United States Safety Council and the Industrial Accident Prevention Associations of Ontario. He suggested that where trades unions exist in a plant, it might be advisable to link up the union more closely with the safety work. It would be wiser, he thought, to spend a little more on prevention and so have to spend less on cure.

Mr. Arthur Ford, editor of the *London Free Press*, also gave a stimulating address.

Mr. V. A. Sinclair, K.C., chairman of the Workmen's Compensation Board, reviewed the work of the Board during the past year, noting that accidents, benefits awarded and medical aid provided for, had all decreased. Part of this was due to payroll decreases, but accident prevention work was responsible for much of it. Explaining amendments passed at the last session to the Workmen's Compensation Act, he showed how the power of installing a merit-rating system, deleted last year, was restored to the Board, as the individual merit-rating system was unwieldy. Regarding silicosis, one of the greatest hazards in the mining industry, an award was formerly made in the primary stage; now the worker must be actually disabled before becoming eligible. When complicated with tuberculosis, in view of the fact that the majority of human beings are affected by this disease to a greater or less extent, it is compensated for at the rate of 50 per cent instead of 66½ per cent as formerly. The rehabilitation clinic established by the Board has operated for nearly a year with entire success.

## SAFETY WORK IN MINING IN CANADA

THE annual report of the Explosives Division, Department of Mines of Canada, deals with the administration of the Explosives Act during the year ending December 31, 1932. Reviewing the operations of factories manufacturing explosives, the report refers to the beneficial influence of safety committees in cultivating the workers' interest in safety measures, and to the system of awards to units, based on the periods of freedom from accident which was inaugurated by the manufacturers several years ago. "The continuous following of a carefully planned routine," it is stated, "forming a habit which becomes as second nature, no doubt makes for safety, but such benefit is vastly enhanced when, to the preservation of good habits, is added a quickened interest in their bearing on safe operation. The worker, not relaxing his observance of ordered procedure, yet examines small details, be they of equipment or procedure, met with in his daily round, and is able to submit for the consideration of the Safety Committee and management suggestions designed always towards the elimination of known or conceivable risks. Thus, appreciation of the importance of the removal of matches or other prohibited articles from one's person before entering a danger area, and fear of the possibility of overlooking the self-search in the change house, prompted an employee to suggest the installation of an automatic reminder. This, which was adopted, took the form of the sudden illumination of a warning sign, effected by the man stepping on a contact board as he, having already changed, was about to punch his card on going to work. Again, the simple remedy of rounding off the square ends of trucks evidently, judged by previous unfortunate experience, saved truckers' fingers from being broken or crushed. Of a more technical character was the valuable suggestion, put forward by an employee, to spray the wash waters in the catch box inside the nitro-glycerine neutralizing house. This was instrumental in obtaining a more complete recovery there of the small quantities of nitro-glycerine in the waste waters, so that the amount collected in the outside catch boxes was so very small that the cleaning out of these in cold weather became unnecessary, and the dangers attendant on the possible presence of frozen crystals avoided."

No accident in explosives manufacturing resulted in loss of life, but in three cases the operators involved sustained burns. These three accidents were analyzed in detail.

The number of magazines under licence at the end of the year was 349, an increase of one, while the number of temporary magazine licences issued showed a decrease of 41, being 195. This decrease was attributed to a noticeably lessened activity in construction work.

A section of the report deals with the special hazards of the thieving and caching of explosives. There was an increase in thefts during the year, 19 magazines being broken into with a loss of approximately 5,100 pounds of dynamite, 19,000 detonators, and 24 quarts of nitro-glycerine.

*Accidents.*—During the year there were 22 killed and 144 injured in accidents occasioned by the use of explosives, as compared with 27 killed and 133 injured in the previous year. While these resulted from a variety of causes, the report draws attention to the frequency of accidents arising from projected debris or failure to take proper cover in the course of operations elsewhere than in mines and quarries: "It is impossible to gauge how many of these could fairly be classed as avoidable accidents, but they should be more easily reducible by ordinary precautionary measures than others associated more intimately with the manipulation of the explosives. The withdrawal of the workers, when a shot is to be fired, may be fully adequate having regard to the normal and expected distribution of debris, but an added factor of safety might well be allowed in view of the possible recurrence of exceptional projection as has been known. Some old hands, who have enjoyed long immunity, are prone to cut the factor of safety very close. This tendency is to be suspected also as in part accounting for the so-called 'prematures'—more usually failing to get away from the shot hole—and in those given as 'returning too soon.'"

It is suggested that new men on such work are perhaps prompted by the fear of ridicule of the older hands in not taking adequate cover.

The report shows that considered in relation to the amount of explosive used, "the occurrence of casualties in their use other than in mines is very marked, being over five times their frequency in mines and quarries." Explaining this difference the report observes: "In the mine there is strict discipline and enforcement of regulations, designed, in so far as is possible, to safeguard the lives of all. Mining men, other than the actual shot-firers, have an understanding of the hazards involved which is not to be expected of the labourers employed in construction work above

ground. The situation is more akin to that of a group of workers in an explosives factory where, even were the operations not regulated and supervised as they are, no individual, necessarily appreciating the dangers of his occupation, would tolerate any observed carelessness on the part of a fellow worker. In the general use of explosives, on the other hand, the safety of the party is dependent practically entirely on the skill, care and con-

sideration of the shot-firer. The last two attributes, if not very pronounced, may be more fully developed by insistence of the employer."

In conclusion, the report pays tribute to the "variety and extent" of the services rendered by the Royal Canadian Mounted Police in the enforcement of the regulations particularly in the sparsely settled sections.

## WORKMEN'S COMPENSATION IN ALBERTA IN 1932

THE fifteenth annual report of the Workmen's Compensation Board of Alberta reviews the administration of the Act during the year ending December 31, 1932, indicating revenue and expenditure, and details with respect to causes of accidents and periods of disability resulting from accidents, etc.

The number of accidents reported during the year was 8,974, of which 31 were fatal. This total represents a reduction of 1,030 accidents in the annual period, accounted for, in part, by the curtailment in industrial activity. The payroll of 1932 was estimated at approximately \$60,000,000—a shrinkage of \$17,000,000 from 1931—while the estimated total of all employees under the Act was 62,690 as compared with 69,863 in 1931.

A summary of the financial statement indicates the following situation for 1932: assessment collected, \$704,808.42; compensation paid, \$407,937.60; pensions awarded, \$391,560.56; medical aid collected (from workmen), \$175,097.91; medical aid paid, \$204,134.87. The total revenue for the year was \$1,078,812.94 and the total expenditure was \$1,282,322.78. The report points out also that the accident and medical aid funds both show debit balances for the year, this being the second year of an adverse balance in both funds, with the result that the accumulated surpluses in many of the classes have been absorbed. The Board was, therefore, compelled to increase the assessment rates in a number of industries.

A survey of the rates of assessment levied on employers per \$100 of payroll shows that among the industries with high rates of assessment are the following: steel construction, \$9; logging and sawmills, each \$8; fishing, \$6; road making (with blasting), \$5; sewer construction (with blasting) and building construction (over four stories in height), each \$4.50; coal mines, \$4.25; threshing operations, \$4. In the same table is also presented the medical aid rating under the various schedules, based on each shift or part of a shift. Under the Alberta Act employers are authorized to deduct a sum as determined by the Board from

the earnings of each workman. These deductions are credited to a medical fund from which payments are made for medical service and hospital attention to workmen injured in the course of employment. As already stated, the medical aid collection in 1932 amounted to \$175,097.91 while in the same period the expenditure totalled \$204,134.87. The highest medical aid rating in 1932 occurred in logging, sawmills, steel construction, sewer construction, and road-making each with 7 cents; coal mining was rated at 6 cents.

The statistics relating to accident claims in 1932 are summarized as follows:

|   |       |
|---|-------|
| Number of employers within the scope of the Act as at December 31, 1932.                | 4,303 |
| Number of accidents reported during the year 1932.                                      | 8,974 |
| Number of accidents and claims not finally disposed of as at December 31, 1931.         | 1,329 |
| Number of claims disposed of by award of pension or payments of compensation.           | 4,607 |
| Number of claims disposed of by payment only of account for medical aid.                | 3,059 |
| Number of accidents disposed of for which no application for compensation was received. | 39    |
| Number of accidents disposed of on which no compensation was due.                       | 2,003 |
| Number of claims on which further payments have to be made.                             | 114   |
| Number of accidents awaiting further reports, and on which no payments have been made.  | 481   |

Of 8,974 accidents reported in 1932, 98 were classed as permanent disability and 8,845 as involving temporary disability. The mining industry was again responsible for the greatest number of accidents with a total of 2,653. Second in accident frequency was the group described as "industries not otherwise classified" in which there were 920 accidents. Building construction was third with 787 accidents. The most frequent cause of accidents was that designated by "flying and falling objects" (1992); followed by "falling and tripping" (1414); and "machin-

ery tools and equipment" (1151). The time loss in non fatal cases was 206,361 days with an average in permanent disability cases of 324.63 days and in temporary disability cases of 35.53 days. The average age of all classes was 35.71 years. The number of accidents to minors (under 20 years) was 431; and to those of advanced age (60 years and over) was 179.

The report refers to two recent amendments, the first of these being the inclusion of retail stores and restaurants under the Act (LABOUR GAZETTE, June, 1932, page 671). The second was for the purpose of enabling the Board to charge a super-assessment not exceeding 33½ per cent against any employer whose accident experience was such as to warrant such procedure (LABOUR GAZETTE, June, 1932, page 660).

The report of the Mine Rescue and First Aid Department outlines the training syllabus and the condition and extent of the equipment of the various stations. Details are also given with respect to the number of first aid classes and the certificates of competency issued.

Included in the report is the annual review of the activities of the chief electrical inspector. A brief statement is presented of the electrification of emergency landing fields and

of grain elevators as well as the inspection of industrial installations and interior wiring in business and residential sections.

### Relief Work Excluded from Quebec Compensation Act

The Quebec Workmen's Compensation Commission recently issued Regulations No. 8 and No. 9, under the Workmen's Compensation Act, 1931 (earlier orders appeared in the LABOUR GAZETTE, January, 1933, page 42, and previous issues).

Regulation No. 8.—"Acting in virtue of the powers vested upon it by Section 77 of the Workmen's Compensation Act 1931 (21 Geo. V, Chap. 100) the Quebec Workmen's Compensation Commission enacts that the sale and distribution of gasoline be subject to the Workmen's Compensation Act and shall form part of Schedule 1 when six or more workmen are usually employed therein."

Regulation No. 9 provides that "All industries of Schedule 1, when operated by a municipal corporation, or for its own account, under an Act respecting unemployment, direct relief, and any other similar provision, are excluded from the operation of the Workmen's Compensation Act."

### MINIMUM WAGES FOR WOMEN IN NOVA SCOTIA

THE second annual report of the Minimum Wage Board of Nova Scotia details the operation of the Act for the year ending September 30, 1932. Referring to the difficulty of enforcing the Act under present conditions the report states: "The industrial difficulties of the past year have made it appear very clear that we could render more real assistance by relaxing somewhat the enforcement of hard and fast rules, and endeavouring to keep open if possible for the women any avenue by which they could still retain their respective positions in the earning of their livelihood. During the year we were continually being approached to discontinue the Act during the depression, but upon going into the matter more fully we found that all other provinces were acting as usual, so our Board decided that as Nova Scotia was perhaps the last to suffer from bad times, we should not be the first to give up this Act, consequently we have continued to function as nearly as possible according to the rules laid down, always bear-

ing in mind that what would be the most lasting good for the women, should be the determining factor in our decision. Where upon investigation we found that the business was going behind, and that unless the employer could cut his overhead he would have to give up, we recommended that the girls would be better off by assisting cutting down expenses and taking lower wages. While this in some instances may have been a hardship we think that a strict enforcement would have caused still greater hardship. Owing to conditions existing we have issued no new orders this year."

The Board held twenty-three meetings, five large conferences, and twenty-three personal interviews. Nine inspections were carried out during the year, and a total of \$355.10 was recovered in arrears of wages for women workers.

A summary of all occupations under the Act makes the following comparison as between 1932 and 1931:—

|   | 1932         | 1931        |
|---|--------------|-------------|
| Number of firms reported.....                     | 152          | 93          |
| Total number of employees.....                    | 2,331        | 2,313       |
| Total number of experienced workers.....          | 2,223        | 1,649       |
| Total number of inexperienced workers.....        | 108          | 664         |
| Total weekly wages paid.....                      | \$ 21,445.95 | \$21,929.79 |
| Total weekly wages paid experienced.....          | 20,190.38    | 14,779.00   |
| Total weekly wages paid inexperienced.....        | 925.83       | 5,969.86    |
| Total weekly wages paid girls under 18 years..... | 329.74       | 1,180.93    |
| Average weekly wage.....                          | 9.20         | 9.49        |
| Average weekly wage over 18 years.....            | 9.26         | 9.67        |
| Average weekly wage under 18 years.....           | 6.85         | 7.02        |
| Percentage of girls under 18 years...             | 2.2          | 7.3         |
| Percentage of girls over 18 years...              | 97.8         | 92.7        |

In the laundry and dyeing industry there were fewer women employed in all classes except part-time workers. The total wages were also less although the statistics showed a larger amount paid to experienced employees. The average weekly wage showed an increase from \$9.24 to \$9.90.

In the confectionery and food trades there was a large decrease in both experienced and inexperienced workers as well as a general reduction in the amount earned and the hours worked. The decrease in the average weekly wage was from \$9.95 to \$6.71.

There was a larger number of firms reported in the hotels and restaurants group, and an accordingly larger total of women workers, although there was a reduced number of younger workers. There was also an increase in the average weekly wage from \$7.47 to \$8.13, and an improvement in the average weekly hours from 76 to 50.

In the textile trades, there were fewer employed, the largest reduction being among the young workers. The average weekly wage was reduced from \$10.98 to \$8.86.

Among telephone operators there was reduced employment, but an increase from \$9.82 to \$12.47 in the average weekly wage.

The chief details with respect to each industry under the Act during the year are summarized in the following paragraphs:—

*Laundries, Dye Works and Dry Cleaning.*—Number of firms, 16; number of women workers, 167 (experienced, 148; inexperienced, 19); time workers, 130; part-time workers, 37; girls under eighteen, 7; total weekly wages, \$1,669.95 (experienced, \$1,482.10; inexperienced, \$138.71; under eighteen, \$49.14); average weekly wage, \$9.90 (average over eighteen years, \$10.13; under eighteen years, \$7.02); percentage of young girls under eighteen years, 11.6; per-

centage of adult workers over eighteen years, 88.4; average weekly hours, 46½.

*Confectioners, Bakers and Allied Food Trades.*—Number of firms, 11; number of women workers, 412 (experienced, 400; inexperienced, 12); time workers, 186; piece workers, 222; part-time workers, 4; girls under eighteen years, 5; total weekly wages, \$2,767.42 (experienced, \$2,681.23; inexperienced, \$61.34; under eighteen years, \$24.85); average weekly wage, \$6.71 (over 18 years, \$6.73; under eighteen years, \$5.97); percentage of young girls under eighteen years, 1.2; percentage of adult workers over eighteen years, 98.8; average weekly hours, 30.2.

*Hotels, Restaurants and Tea Rooms.*—Number of firms, 93; number of women workers, 646 (experienced, 637; inexperienced, 9); time workers, 646; girls under eighteen years, 9; total weekly wages, \$5,253.69 (experienced, \$4,803.61; inexperienced, \$386.08; under eighteen years, \$64); average weekly wage, \$8.13 (over eighteen years, \$8.24; under eighteen years, \$7.11); percentage of young girls under eighteen years, 1.4; percentage of adult workers over eighteen years, 98.6; average weekly hours, 50.

*Textiles, Needle Trades and Leather Work.*—Number of firms, 9; number of women workers, 537 (experienced, 428; inexperienced, 55); time workers, 154; piece workers, 383; girls under eighteen years, 28; total weekly wages, \$4,762.82 (experienced, \$4,347.57; inexperienced, \$233.90; girls under eighteen years, \$181.35); average weekly wage, \$8.86 (over eighteen years, \$8.89; under eighteen years, \$8.35); percentage of young girls under eighteen years, 5.3; percentage of adult workers, 94.7; average weekly hours, 47.

*Telephone Operators.*—Number of firms, 1; number of women workers, 441; total weekly wages, \$5,502.75; average weekly wage, \$12.47; percentage of adult workers, 100; average weekly hours, 48.

*Small Factories, Paper Trades and Printing.*—Number of firms, 22; number of women workers, 128 (experienced, 13; inexperienced, 115); time workers, 99; part-time workers, 29; girls under eighteen years, 2; total weekly wages, \$1,489.32 (experienced, \$1,373.12; inexperienced, \$105.80; girls under eighteen years, \$10.40); average weekly wages, \$11.63 (over 18 years, \$11.74; under eighteen years, \$5.20); percentage of young girls under eighteen years, 1.5; adults over eighteen years, 98.5; average weekly hours, 47.

During the year the Board issued an order establishing the following minimum wages to be paid to female labour in factories:—

Cities and towns of 17,000 population and over: experienced workers, \$11; inexperienced adults over eighteen years—6 months at \$9, 6 months at \$10; young girls under eighteen years—6 months at \$7, 6 months at \$8.50, and 6 months at \$10.

All towns under 17,000 population: experienced workers, \$10; inexperienced adults over

eighteen years—6 months at \$8, 6 months at \$9; young girls under 18 years—6 months at \$6; 6 months at \$7.50, and 6 months at \$9.

The number of inexperienced adults or young girls or both is fixed by the Act so as not to exceed 25 per cent of the total working force, except when such total is less than four workers.

## Registration of Workers under Quebec Women's Minimum Wage Act

The following Order in Council respecting section 4 of the Women's Minimum Wage Act was published in the *Quebec Official Gazette*, April 29, 1933.

743—approved April 19, 1933

The Honourable the Minister of Labour, in a memorandum dated April 18, 1933, sets forth:

1. That pursuant to article 4 of the Women's Minimum Wage Act (Revised Statutes, 1925, chapter 100) as amended by Act 20 George V, chapter 46, section 2, and replaced by the Act 22 George V, chapter 48, section 2, again amended by the Act 23 George V, chapter 39 (Bill No. 2), section 1, "the Lieutenant-Governor in Council may, upon recommendation of the commission, adopt, amend or repeal by-laws to oblige any employer to keep a Register in which shall be entered the names, ages and places of abode of the girls or women whom he employs, the time of each day during which such girls or women were employed as well as the salary they received for such work whether hired by the day, hour, by the piece or according to any other mode."

2. The Women's Minimum Wage Commission, by resolution unanimously adopted at a meeting held at Quebec the 5th of April, 1933, a copy whereof is annexed to the aforesaid memorandum, recommends that the employer, covered by the order Nos. 1a and 2a; 3 and 4; 5 and 6; 7, 7a and 7b; 8, 8a and 8b; 9 and 9a; 10 and 10a; 11, 11a and 11b; 12 and 12a; 13 and 13a and 14, be subject to the provisions mentioned in the preceding paragraph.

And recommends:

That from the 1st of May, 1933, the employers subject to the said orders:

1a and 2a: covering laundries, dye and dry-cleaning establishments;

3 and 4: covering printing, binding and lithographing shops and envelope factories;

5, and 6: covering the textile industry, comprising weaving, knitting, spinning and similar processes;

7, 7a and 7b: covering the shoe trade and other leather industries;

8, 8a and 8b: covering women's, men's and boys' garments;

9 and 9a: covering hats and caps for men and boys, ladies headgear (with the exception of apprentice work);

10 and 10a: covering dresses for women and children, silk underwear, kimonas and fine lingerie;

11, 11a and 11b: covering overalls, mackinaws, shirts, collars and ties; cotton, textile and rayon underwear, cotton dresses exclusively;

12 and 12a: covering the tobacco, cigar and cigarette industry;

13 and 13a: covering the fur trade;

14: covering the foodstuff industry, comprising the manufacture of biscuits, cakes, bread, alimentary pastes, cereals of all kinds, cocoa, chocolate, confectionery and sweets of all kinds;

be obliged: "to keep registers in which shall be entered the names, ages and places of abode of the girls or women whom he employs, the time of each day during which such girls or women were employed, as well as the salary which they have received for such work whether hired by the day, hour, piece or according to any other mode."

## Plan to Assist Unemployed Chinese Overseas

In view of the fact that there are numerous Chinese workers residing in various foreign countries who have been thrown out of employment as a result of the prevailing depression, measures for the relief of unemployed Chinese overseas have been formulated by the Chinese Overseas Affairs Committee for submission to the executive council. The relief measures provide, in the first place, for a thorough investigation into the number and conditions of unemployed Chinese residents abroad. Tabulated forms will be circulated to the Chinese legations and consulates throughout the world. Following these inquiries measures are to be devised for the repatriation to China of those who are in a position to obtain employment in their own country. For those who have to remain abroad a relief fund would be raised and efforts made to secure employment. Besides these measures of an emergency nature, a permanent policy designed to guard against the possibility of unemployment is also under consideration. It provides among other things, for a rigid examination of Chinese workers leaving for abroad. Only those who are physically fit and who possess suitable qualifications will be allowed to emigrate. Plans will also be drawn up for the employment of oversea Chinese in domestic industries and land reclamation in Northwest China.

## ANNUAL REPORT OF SUPERINTENDENT OF EDUCATION FOR NOVA SCOTIA, 1931-32

THE Superintendent of Education for Nova Scotia, in his annual report for the fiscal year ended July 31, 1932, states that educational effort was well maintained during that period. Over 13 per cent of total provincial government expenditure in the province went to education, this proportion being higher than in recent years, though it was less than in the early years of the century when the social services were fewer. In spite of a decline in population, the school enrolment showed an increase as compared with the preceding year, the gain being due to stricter enforcement of attendance, and to the economic depression with its consequent lack of employment for the young, who, under the circumstances, remain longer at school. The total number of enrolled pupils was 116,041, of which number 15,226 were in high school grades.

The number of public school teachers was 3,542, an increase of 58 over 1931. There were 188 more teachers with professional training and 26 more university graduates. Male teachers formed only about 10 per cent of the total number. As to teachers' salaries, the report says: "The average salary for the province remains low. Last year the slight increase of three dollars (from \$754 to \$757) was wholly due to the operation of provincial aid. In point of fact, the average rural salary declined by a few dollars to \$552, while the average urban salary rose from \$1,085 to \$1,103—both inclusive of provincial aid. In 1927 the average salary for the province was \$669. . . . It must be pointed out however, that while the average rural salary is \$552 with provincial aid included, in more than half the sections the teacher is receiving less than \$400, apart from provincial aid, and in fifty rural sections last year the teacher's salary fell below \$300. This situation arises out of the present system of unequal rates and can only be remedied by the adoption of the enlarged unit for the purpose of school finance."

During the year covered by the report the Education Act was amended to provide for an increase in teachers' annuities. Before the passage of the Pension Act in 1928, it is stated, retired teachers were in receipt of an annuity equivalent to the amount of provincial aid they were receiving at the date of retirement. The Pension Fund, being contributory, naturally could apply only to teachers actually in service when the Pension Act came into force. The annuities, which are paid directly by the Department of Education, were, the superintendent stated, entirely inadequate, especially when compared with the new pensions. For

some time the unbalanced condition of provincial finance delayed readjustment. Last session, however, the Legislature put the annuitants on the same basis as the pensioners, so far as the departmental contribution is concerned. In other words, the annuities hereafter paid will be one and one-half times the increased provincial aid, which is the share of the pension now provided from the public funds to teachers retiring under the Pension Act.

Another clause in the Education Act of 1932 prescribes a form of contract between teachers and school boards. In general this follows the practice in other provinces, thus tending towards uniformity throughout the Dominion. Two types of contract are set forth, for urban and rural schools respectively. According to their provisions the engagement is to teach under the authority of the school board and their successors in office during a year specified and "so on from year to year" until the agreement is terminated. Salaries are to be paid in ten equal instalments in urban sections and quarterly in rural sections. Lastly, in urban sections an agreement may be terminated by three months' notice in writing by either party. In rural sections only one month's notice is necessary, but it is stipulated that "no such notice shall be given within one month before or after opening of school after the summer vacation unless the parties hereto mutually agree to any other notice."

The report contains statistical tables regarding schools and colleges in the province. It also includes the annual report of Dr. F. H. Sexton, Director of Technical Education for the province. This report was printed in the annual report of the Department of Labour of Canada, which was briefly outlined in the *LABOUR GAZETTE*, November, 1932, page 1173.

A system of industrial councils for the Netherlands is provided for by a recent law. The councils are to consist of from 6 to 20 members, depending upon the character of the industry or enterprise. One-half of the members are to be appointed by labour unions and the other half by employers' associations. A council may act as a deliberative, advisory, executive, or arbitral body in matters concerning the affairs of their respective enterprises, such as trade agreements, training of workers, combating of unemployment, promotion of good relations between employers and workers, and technical and commercial matters.

## LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

### Dominion and Provincial Jurisdiction in Regard to Decisions of 1932 Conference

The following Order in Council has been approved by His Excellency the Governor General:

*P.C. 545—Dated 24th April, 1933*

The Committee of the Privy Council have had before them a report, dated 22nd March, 1933, from the Minister of Justice, submitting that he has had under consideration, upon reference from the Department of Labour, the authentic texts of the Draft Conventions and Recommendations adopted by the International Labour Conference at its sixteenth session (10th to 30th April, 1932), with a view to determining whether, and to what extent, the subject matter of these Draft Conventions and Recommendations, respectively, lies within the competence of Parliament or of the provincial legislatures, in order that the Draft Conventions and Recommendations may be brought by the Dominion Government, in discharge of its obligations under Article 405 of the Peace Treaty with Germany and the corresponding articles of the other treaties of peace, before the authority or authorities within whose competence the matter in each case lies, for the enactment of legislation or other action.

The subjects dealt with by the Draft Conventions and Recommendations above mentioned are as follows:—

I. Draft Convention concerning the protection against accidents of workers employed in loading or unloading ships.

II. Recommendation for expediting reciprocity as provided for in the Convention, adopted in 1932, concerning the protection against accidents of workers employed in loading or unloading ships.

III. Draft Convention concerning the age for admission of children to non-industrial employment.

IV. Recommendation concerning the age for admission of children to non-industrial employment.

The Minister observes that the Draft Convention concerning the protection against accidents of workers employed in loading or unloading ships, which is a revision of the Draft Convention concerning the same matter, which was adopted by the International Labour Conference at its twelfth session (30th May to 21st June, 1929), and which was the subject of Clause IV of Order in Council of the 19th December, 1930—P.C. 2980—sets out certain rules which are to be followed for the protection of workers engaged in performing all or any part of the work of loading or unloading any ship whether engaged in maritime or inland navigation, excluding ships of war, in, on, or at any maritime or inland port, harbour, dock, wharf, quay or similar place at which such work is carried on.

The Minister is of the opinion that legislation necessary to give effect to the Convention and to the Recommendation for expediting reciprocity, above mentioned, would be competent to Parliament under the authority conferred by section 91, subsection 10, of the British North America Act, 1867.

The Minister is further of the opinion that it is within the competence of the several provincial legislatures to legislate within the province with regard to matters dealt with by the Draft Convention and Recommendation concerning the age for admission of children to non-industrial employment.

The Committee concur in the foregoing and advise that a copy hereof, together with an authenticated copy of the Draft Conventions and Recommendations, be transmitted to the Lieutenant-Governors of the respective Provinces for the consideration of their respective Governments with a view to the enactment of legislation or such other action upon the subject-matter of the Draft Convention and Recommendations within the provincial sphere of jurisdiction as each government may be advised to take.

E. J. LEMAIRE,

Clerk of the Privy Council.

### REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD, JANUARY TO MARCH, 1933

**B**USINESS, as indicated by the work of the offices of the Employment Service of Canada during the quarter, January to March, 1933, showed lessened activity when a comparison was made with the records of the corresponding period of 1932, as there was a decrease of 25 per cent in vacancies and nearly 27 per cent in placements. All industrial divisions, except farming, trade and communication, recorded declines under both comparisons, while services showed a gain in vacancies but a smaller number of placements, the most pronounced loss occurring in construction and maintenance, where fewer men had been sent to highway camps. Manufacturing, also,

showed a marked loss, but the declines in other groups were not outstanding. The gain in farming, which was noteworthy, was due to increased placements effected under the Farm Relief Act and was highest in the prairie provinces. Provincially, Ontario, Manitoba and Alberta showed fewer vacancies and placements, the loss in these three provinces more than counterbalancing the gains recorded in all others, the most substantial of which were in Nova Scotia, where considerable relief work had been undertaken, and in Saskatchewan, where numerous farm placements had been made. The accompanying chart gives the vacancies and placements re-

## VACANCIES AND PLACEMENTS OF THE EMPLOYMENT

| Industry                                  | Nova Scotia |            |        | New Brunswick |            |        | Quebec    |            |        | Ontario   |            |        |
|---|-------------|------------|--------|---------------|------------|--------|-----------|------------|--------|-----------|------------|--------|
|   | Vacancies   | Placements |        | Vacancies     | Placements |        | Vacancies | Placements |        | Vacancies | Placements |        |
|   |             | Regular    | Casual |               | Regular    | Casual |           | Regular    | Casual |           | Regular    | Casual |

ported by the Employment Service of Canada, by industrial groups in the various provinces, during the period January to March, 1933.

From the chart on page , which accompanies the article on the work of the Employment Offices for the month of March, it will be seen that the curves, both of vacancies and placements in relation to applications, showed little change throughout the quarter. During

the first half of January a marked drop from the previous month was recorded, the course of the curves thereafter showing a slightly upward trend until the first half of March, when a downward change was noticeable, followed by a rise of less than 1 per cent during the latter half of the month. At the close of the quarter, however, the level of each curve was about 14 points below that shown at the end of the corresponding period of 1932. During the

| 1,800     | 987        | 769    | 2,018        | 1,201      | 497    | 951       | 664        | 272    | 1,131            | 462        | 668    | 18,474    | 9,408      | 6,502  |

period, January to March, 1933, there was a ratio of 50.2 vacancies and 48.0 placements for each 100 applications for employment, as compared with 59.5 vacancies and 57.9 placements during the corresponding period a year ago.

The average number of positions offered daily during the quarter under review was 986; of applications registered 1,965; and of placements effected 943, in contrast with a

daily average of 1,337 vacancies, 2,248 applications and 1,302 placements in regular and casual employment during the first quarter of 1932.

During the 3 months, January to March, 1933, the offices of the Employment Service reported that they had made 75,866 references of persons to positions and had effected a total of 71,641 placements, of which 31,460 were in regular employment and 40,181 in casual work. Of the placements in regular employ-

ment, 22,052 were of men and 9,408 of women, while casual work was found for 33,679 men and 6,502 women. A comparison with the same quarter of 1932 shows that 97,629 placements were then made, of which 32,640 were in regular employment and 64,989 in casual work. Applications for employment during the period under review were received from 113,895 men and 35,431 women, a total of 149,326 in contrast with the registration of

168,584 persons during the same period of 1932. Employers notified the Service during the first quarter of 1933 of 74,929 positions, of which 56,455 were for men and 18,474 for women, as compared with 100,239 opportunities for work offered during the corresponding period of 1932.

On page of this issue will be found a report in detail of the transactions of the Employment Service for the month of March, 1933.

## EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN MARCH, 1933

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on April 1 was 7,975, the employees on their payrolls numbering 698,544 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for March was 1,736, having an aggregate membership of 151,307 persons. It should be un-

derstood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 60 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

### (1) The Employment Situation at the Beginning of April, 1933, as Reported by Employers

According to data tabulated by the Dominion Bureau of Statistics from 7,975 firms, employment at the beginning of April showed a seasonal falling-off; this was smaller than the decline recorded on April 1, 1932, but exceeded that indicated in the early spring of 1931. The payrolls of the firms co-operating aggregated 698,544 persons on the date under review, compared with 706,858 in the preceding month. The index, based on the 1926 average as 100, stood at 76.0, as compared with 76.9 on March 1, 1933, while on April 1 in the twelve preceding years it was as follows: 1932, 87.5; 1931, 99.7; 1930, 107.8; 1929, 110.4; 1928, 102.3; 1927, 97.4; 1926, 92.5; 1925, 88.3; 1924, 90.4; 1923, 88.7; 1922, 81.8 and 1921, 85.1.

There was an increase on April 1 in manufacturing, especially of leather, animal products, lumber, textile and iron and steel products; transportation, on the whole, and wholesale trade also showed improvement. On the other hand, logging camps reported large seasonal reductions, and construction, mining and communications were also slacker.

### Employment by Economic Areas

Among the provinces, the Maritimes and British Columbia registered increased employment; of the losses, that shown in Ontario involved the greatest number of workers.

*Maritime Provinces.*—There was an increase in the Maritime Provinces on April 1, when the 571 co-operating employers enlarged their payrolls by 1,110 persons to 54,630. Transportation released employees; logging showed important seasonal losses, and activity also declined in communications and trade. On the other hand, manufacturing, coal mining and construction showed improvement. Employment was in smaller volume than at the beginning of April, 1932, when the reduction had involved a larger number of workers.

*Quebec.*—Manufacturing, transportation and construction afforded more employment in Quebec, while logging reported large seasonal contractions, and there were small losses in mining, communications and trade. Within the manufacturing group, leather, textile and iron and steel factories recorded increased em-

ployment, but cement products, rubber, vegetable food, lumber and some other plants showed curtailment. Statements were received from 1,934 firms, with 197,187 employees, as against 199,883 on March 1. The index was lower than on the same date of last year, but the curtailment then indicated was on a larger scale.

*Ontario.*—The trend of employment was downward in Ontario, where 3,526 employers released 5,536 workers from their staffs, bringing them to 293,867 on April 1. A decrease had been registered by the firms making returns for the same date in 1932, and employment then was at a higher level than at the

cline at the beginning of April in the present year took place in coal mining, but construction, retail trade, logging and manufacturing also showed curtailment. The working forces of the 1,178 co-operating employers aggregated 96,919 persons, compared with 98,989 on March 1.

*British Columbia.*—An advance was indicated in British Columbia, according to returns tabulated by the Bureau from 766 firms with 55,941 employees, or 876 more than in the preceding month. A larger increase had been noted on April 1 of a year ago, when employment was in greater volume. There were gains on the date under review in manu-

### EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

beginning of April of the present year. Important losses were indicated in highway construction on the date under review, and logging and building construction also showed curtailment. In the manufacturing group, iron and steel products recorded increased employment, while pulp and paper and tobacco factories showed decreases. On the other hand, transportation and trade were slightly higher.

*Prairie Provinces.*—Further seasonal losses were noted in the Prairie Provinces; these involved fewer workers than those reported on April 1, 1932, when the index was higher than on the date under review. Most of the de-

facturing, especially of lumber products, and in logging, railway construction and trade, while mining, building construction and services released help.

Table I gives index numbers by economic areas.

### Employment by Cities

Employment increased in Toronto, Montreal and Windsor and the adjacent Border Cities; losses were noted in Vancouver, while Quebec City, Hamilton, Ottawa and Winnipeg reported very little change.

*Montreal.*—Expansion was shown in Montreal, according to 1,107 firms who reported the

addition of 1,919 persons to their staffs, bringing them to 112,263 on April 1. Activity was less than on the same date last year, and the gains then indicated were on a larger scale. Manufacturing was busier than on March 1, textiles showing the greatest gain in this comparison. Transportation and construction also reported heightened activity, and communications showed a loss.

*Quebec.*—Construction registered a gain in Quebec City, but manufacturing was slacker, so that there was practically no change in the general situation. Statements were received from 148 employers with 11,497 workers, being an increase of 50 over March. Not much change

was noted on April 1, 1932, when the index was higher than on the date under review.

*Toronto.*—Toronto employers reported a fair increase, there being an improvement in manufacturing and services, and small losses in communications, transportation and trade. The working forces of the 1,179 co-operating firms totalled 101,492 persons. Employment was not so active as on the same date of last year, when a gain had also been indicated.

*Ottawa.*—There was a small decrease in activity in Ottawa, chiefly in manufacturing; an aggregate payroll of 10,795 workers was reported by the 151 employers whose statistics were tabulated, and who had 10,866 in their

NOTE.—The "Relative Weight" in Table I shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS  
(AVERAGE CALENDAR YEAR 1926=100)

|   | Canada | Maritime<br>Provinces | Quebec | Ontario | Prairie<br>Provinces | British<br>Columbia |
|---|--------|-----------------------|--------|---------|----------------------|---------------------|

| Relative Weight of Employment by Economic<br>Areas as at April 1, 1933..... | 100.0  | 7.8                   | 28.2   | 42.1    | 13.9                 | 8.0                 |

last report. The index was lower than in the spring of 1932, when an advance was recorded on a large scale.

*Hamilton.*—Manufacturing and transportation afforded greater employment in Hamilton, while construction and trade were rather less active. Returns were compiled from 237 firms employing 22,247 persons, or 82 more than on March 1. The level of employment was lower than on the same date of last year, but the movement had then been unfavourable.

*Windsor and the adjacent Border Cities.*—There was a considerable increase in employ-

ment in the Border Cities on April 1. Data were received from 134 firms employing 10,108 workers, as against 8,977 in the preceding month. Automobile plants reported a very large share of the advance, while other industries showed only slight changes. Activity was not so great as in the spring of 1932, and the expansion then indicated was on a rather larger scale.

*Winnipeg.*—Employment showed little change in Winnipeg, where 92 persons were released from the payrolls of the 394 employers furnishing statistics, who reported 32,526 workers. Construction and manufacturing

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

| Relative Weight of<br>Employment by<br>Cities as at April 1,<br>1933..... | 16.1     | 1.6    | 14.5    | 1.5    | 3.2      | 1.4     | 4.7      | 3.5       |

were more active, but communications, transportation and trade were slacker. On April 1, 1932, a loss had been noted, but the index then was higher.

*Vancouver.*—A decline in employment occurred in Vancouver, according to 341 firms with 24,396 employees, as compared with 24,838 in the preceding month. The loss was principally in the manufacturing group, but there were also small decreases in construction, transportation and services. Very little change had been reported at the beginning of April of last year, but employment was then generally more active.

Index numbers by cities are given in Table II.

### Manufacturing

Further improvement was recorded in manufacturing. The leather, textile, animal products and iron and steel industries showed the greatest gains, but lumber, electric current and chemical plants also afforded increased employment. On the other hand, curtailment was indicated in tobacco and beverage, pulp and paper, non-ferrous metal and rubber factories. Statements were received from 4,906 manufacturers, employing 376,790 operatives, as compared with 375,675 in the preceding month. The increase was smaller than that noted on April 1, 1932, when the index was higher than on the date under review.

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES  
(AVERAGE CALENDAR YEAR 1926=100)

*Animal Products, Edible.*—Moderate improvement was noted in dairies and in fish and meat-packing establishments. The group showed gains in all provinces. Statements were tabulated from 220 firms employing 16,392 workers, as against 16,032 at the beginning of

March. This increase exceeded that recorded on April 1, 1932, but activity was then slightly higher.

*Leather and Products.*—Practically all branches of the leather group reported increases in personnel, those in leather clothing

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

| Industries                                | Relative weight | April 1 1933 | Mar. 1, 1933 | April 1 1932 | April 1, 1931 | April 1, 1930 | April 1, 1929 | April 1, 1928 |

<sup>1</sup> The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

and footwear factories being most pronounced. The 252 co-operating employers enlarged their payrolls from 16,987 persons in the preceding month, to 17,437 at the beginning of April. A smaller advance had been indicated on April 1 a year ago, when the index of employment was over four points higher.

*Lumber and Products.*—Seasonal expansion was noted in rough and dressed lumber mills, and in container, vehicle and sporting and athletic goods factories, while the furniture and other wood-using groups released employees. The general improvement was less than that reported on the same date in 1932, when employment was in greater volume. Statistics were compiled from 756 manufacturers, with 23,195 employees, as compared with 23,029 at the beginning of March, 1933. The largest gains were in British Columbia.

*Musical Instruments.*—There was an improvement in musical instrument factories, 36 of which employed 664 persons, or 84 more than on March 1. The increase took place in Quebec and Ontario. Employment was not so active as at the beginning of April, 1932, although losses had then been indicated.

*Plant Products, Edible.*—There was very little change in employment in this group in the period under review, gains in the sugar and syrup and coffee and spice groups being offset by losses in flour and cereal mills, bakeries and chocolate and confectionery factories. Returns were tabulated from 382 firms whose payrolls aggregated 24,610 persons as compared with 24,700 on March 1. The index was lower than in the spring of last year, when very little change had also been noted.

*Pulp and Paper Products.*—The movement in the groups coming under this heading was downward, the greatest losses being in pulp and paper factories. According to data received from 557 firms in the industry as a whole, they employed 49,278 workers, as compared with 50,418 in their last report. All provinces shared in the loss. Employment was in less volume than on April 1, 1932, when gains had been indicated.

*Rubber Products.*—Activity in 45 rubber works declined, 145 persons being released from their staffs, which totalled 9,622. A rather larger reduction had been shown on the same date last year, but the index then was many points higher.

*Textile Products.*—There was a further increase in employment in textiles at the beginning of April, chiefly in garment and personal furnishing factories, while thread, yarn and cloth mills were slacker. Greater improvement had been noted on April 1, 1932, when employment was in better volume.

Statements were compiled from 850 manufacturers with 77,545 employees, or 298 more than on March 1, 1933. There were general gains, except in British Columbia, those in Quebec being largest.

*Tobacco, Distilled and Malt Liquors.*—Reductions in employment were recorded in this group, 358 persons being released from the working forces of the 153 co-operating establishments, which employed 14,807 workers on the date under review. Most of the decline occurred in Ontario, and in the tobacco division. The index was slightly lower than in the spring of last year.

*Chemicals and Allied Products.*—One hundred and fifty-one plants turning out chemical and allied products reported 7,941 employees, as compared with 7,797 in their last return. All provinces, except the Prairies, showed slight gains. The advance involved much the same number of workers as that indicated on the corresponding date in 1932, but the index was then higher.

*Clay, Glass and Stone Products.*—There was very little general change in personnel in building material works, 178 of which employed 5,237 persons, a number slightly larger than in their last report. A minor increase had been indicated on April 1, 1932, and the index was then decidedly higher.

*Electric Current.*—A slight improvement was shown in this group, in which 91 plants reported 13,143 employees, or 19 more than at the beginning of March. There were gains in Ontario, but losses in Quebec. The level of employment was lower than on April 1, 1932, when a small decrease had been reported.

*Electrical Apparatus.*—Activity in electrical appliance factories increased, according to the 86 co-operating firms, who reported 9,356 persons on their payrolls, as against 9,295 in their last report. A considerable decline had been noted on April 1, 1932, but the index was then many points higher.

*Iron and Steel Products.*—Statistics were received from 772 manufacturers in this group, whose staffs were enlarged by 1,420 workers to 78,927 at the beginning of April. There were considerable gains in the automobile, crude, rolled and forged, land vehicle and foundry and machine shop products, but the machinery and some other groups released employees. Improvement was shown in all provinces. Smaller gains had been recorded in the same period last year, but the index number was then many points higher than on April 1, 1933.

*Non-ferrous Metal Products.*—Returns tabulated from 126 manufacturers in this group showed that they employed 11,927 persons, as

against 11,962 on March 1. Most of the decreases took place in the gold, silver and platinum and aluminum divisions, while other groups within the industry were busier. British Columbia showed curtailment, while improvement was noted in Ontario and Quebec. The level of employment was lower than in the spring of 1932, although greater curtailment had then been indicated.

**Mineral Products.**—A small decline in the number of workers was reported in these industries at the beginning of April, according to data received from the 111 co-operating establishments, in which 11,194 persons were employed. The volume of employment in this group was less than in the same period of last year, when little general change had been reported.

### Logging

Continued and larger seasonal losses were shown in logging camps, 233 of which reduced their payrolls from 15,738 men on March 1 to 9,762 on the date under review. The most extensive decreases were in Quebec and Ontario, although all provinces except British Columbia indicated reductions. Much larger contractions had been reported on April 1, 1932, and the index number was then lower than on the date under review.

### Mining

**Coal.**—As is customary at the beginning of April, there was, on the whole, a falling-off in employment in coal mines during the period being reviewed; this occurred in the Prairie Provinces, while improvement was noted in the Eastern coal fields. Data were received from 89 operators, whose staffs included 22,231 employees, as against 23,267 in their last report. The index was lower than in the spring of last year, when declines had also been reported.

**Metallic Ores.**—Reports were received from 67 firms in this group, employing 15,512 workers, or 291 fewer than at the beginning of March. A minor gain had been indicated on the same date in 1932, when the index stood at 135.1, compared with 131.3 at the beginning of April of the present year.

**Non-metallic Minerals, other than Coal.**—A slight decrease was registered in this group: 70 firms employed 3,595 persons, as compared with 3,627 in the preceding month. Very little general change was indicated by the 70 employers furnishing statistics on April 1 of last year, and activity then was much greater.

## Communications

According to information received from 82 communication companies and branches, they reduced their staffs by 277 employees to 22,243 on April 1. The decline took place largely in Ontario and the Prairie Provinces. A larger falling-off in employment had been recorded on April 1, 1932, but employment was then brisker than on the date under review.

## Transportation

An increase was indicated in water transportation, while steam railway and local transportation registered slight declines. Statistics were compiled from 370 employers of 87,701 workers, as compared with 87,580 on March 1. Of the former number, 23,733 persons belonged in the local transportation, 53,714 in the steam railway and 10,254 in the water transportation division. Employment in transportation was in smaller volume than on the corresponding date last year when only a small change had been recorded.

## Construction and Maintenance

**Building.**—Statements were compiled from 629 building contractors, with 10,031 persons in their employ, or practically the same number as in their last report. A large decline was indicated on April 1, 1932, although the index then was higher.

**Highway.**—Curtailment in staffs was noted on highway construction and maintenance; 305 contractors employed 31,359 men, as compared with 34,359 in the preceding month. Quebec and the Maritime Provinces reported increased activity, but there were losses in the remaining provinces. Reductions had also been shown on April 1 of last year, when the number employed in this work was greater than in the period under review.

**Railway.**—There was a gain in employment in the construction departments of the railways in the Maritime Provinces, Quebec, Ontario and the Prairie Provinces, while decreases were indicated in British Columbia. The working forces of the 36 co-operating contractors and divisional superintendents aggregated 21,661 men, whereas in the preceding month they had 20,713 employees. The index number was a few points lower than in the spring of 1932, although a large recession had then been recorded.

## Services

This group showed a moderate decline, according to 311 firms with 19,985 employees, compared with 20,090 in the preceding month. Laun-

dries and dry-cleaning establishments registered slight improvement, but hotels and restaurants released help. A decline had also been reported at the beginning of April, 1932, but employment was then in rather greater volume than on the date under review.

### Trade

There was a gain of 205 persons in the forces of the 877 co-operating wholesale and retail establishments, which employed 77,654 workers on April 1; most of the advance occurred in the wholesale division. An increase

had also been indicated on the same date a year ago, when the index of employment was some points higher.

### Tables

Index numbers of employment by economic areas, leading cities and industries, respectively, are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

## (2) Unemployment in Trade Unions at the Close of March, 1933

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are employed at work other than their own trades or who are idle owing to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to organizations reporting.

The situation among local trade unions at the close of March declined very slightly from the previous month according to the returns tabulated from a total of 1,736 labour organizations, combining a membership of 151,307 persons. Of these 38,002, or a percentage of 25.1, were without employment on the last day of the month, in contrast with percentages of 24.3 in February and 20.4 in March, 1932. Activity in Nova Scotia unions showed large contractions from February, much unemployment being reported by a union which had failed to make a return in February. Alberta unions also indicated a noteworthy employment drop which was confined chiefly to the coal mines of the province. In British Columbia declines of minor importance occurred. The tendency in the remaining provinces, however, was towards a better employment volume, though the changes were not outstanding, ranging from 2 per cent in Ontario to gains of less than 1 per cent in both New Brunswick and Quebec. Nova Scotia unions, as in the previous comparison, showed the most pronounced drop in activity from March of last year, Ontario, Quebec, British Columbia, New Brunswick, Saskatchewan and Alberta unions also indicating recessions of much lesser proportions. Manitoba unions alone reported a more favourable employment trend during the month reviewed, though the change was nominal only.

Each month the returns on unemployment for the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these, Saint John and Winnipeg unions were the only ones to report a slowing up of industrial activity from February, which was very slight. On the other hand, Edmonton, with a gain of 3 per cent showed the most noteworthy advancement, increases of about 2 per cent being recorded in Toronto and Vancouver, while the improvement evident among Halifax, Montreal and Regina unions was less than 1 per cent. When a comparison is made with the returns in these cities for March, 1932, Saint John, with a reduction in employment of nearly 6 per cent, showed the most substantial change during the month reviewed, followed by Toronto and Regina, with contractions of slightly over 5 per cent, and Montreal, with recessions of over 4 per cent. Declines, on a smaller scale, also prevailed in Winnipeg. Halifax, Edmonton and Vancouver unions, however, reported a better employment volume available than in March last year, the gains in the first two cities mentioned being around 3 per cent and in the latter city 1 per cent.

The chart which accompanies this article illustrates the unemployment trend by months from January, 1927, to date. The curve, which during January remained on the same level as in December last year showing a stationary unemployment volume, and tended slightly downward in February indicating a more favourable trend of activity, followed a contrary course in March to that of February, the projection being slightly upward, an evidence of unemployment increases during the month reviewed. The curve also rested at a higher level than in March last year, when employment was somewhat more plentiful.

In the manufacturing industries 28.2 per cent of the members reported were without work, as compared with 25.6 per cent in Feb-

ruary and with 18.4 per cent in March, 1932. The percentage for March this year was based on the returns compiled from a total of 464 unions in the manufacturing industries, with 42,941 members, 12,107 of whom were idle on the last day of the month. The iron and steel trades reported curtailment of activity from February, affecting the greatest number of workers, although from a percentage basis the employment recessions manifest by glass workers, cigar makers and metal polishers were much larger, including, however, fewer members. Contractions in activity of lesser degree were reflected by leather workers, declines on a very much smaller scale being apparent among textile and jewellery workers, pulp and

March last year and among general labourers, and paper makers also improvement was noted.

The coal mining industry was rather severely affected by mine closings in the western areas during March, which were the deciding factor in the unemployment rise from 6.8 per cent in February to 17.6 per cent in the month reviewed. For March, returns were received from 44 unions of coal miners, with 12,104 members, 2,114 of whom were reported idle on the last day of the month. Little change was shown in the Nova Scotia coal situation from February, the tendency, however, being toward lessened employment, while in Alberta and British Columbia the situation was distinctly

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

being favourable. This was manifest by the reports tabulated from 219 associations of building tradesmen with a total of 18,368 members, of whom 13,048 were reported idle at the end of the month, a percentage of 71.0, in contrast with an unemployment percentage of 71.7 in February. A noteworthy falling off in activity was shown by plumbers and steamfitters, painters, decorators and paper hangers and bridge and structural iron workers from February, slight declines being shown among electrical workers, granite and stonecutters and hod carriers and building labourers. On the other hand, bricklayers, masons and plasterers reported a considerable

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

| Month             | N.S. and Prince<br>Edward Island | New Brunswick | Quebec | Ontario | Manitoba | Saskatchewan | Alberta | British<br>Columbia | Canada |

increase in activity during March, as did also tile layers, lathers and roofers. A practically unchanged situation was reported by carpenters and joiners from February. Conditions in the building trades were slacker than in March, 1932, when 62.3 per cent of idleness was recorded. In this comparison electrical workers and tile layers, lathers and roofers reported heightened activity during the month reviewed, the improvement for the latter tradesmen being substantial. On the contrary, the employment losses suffered by granite and stonecutters were particularly heavy, and extensive curtailment was evident among carpenters and joiners, bridge and structural iron workers, plumbers and steamfitters and hod carriers and building labourers. Painters, decorators and paperhangers also reported some falling off in activity from March a year ago, while the situation for bricklayers, masons and plasterers remained substantially the same in both months compared.

Improvement on a small scale was recorded in the transportation industries during March from the previous month as shown by the reports tabulated from 762 associations, covering a membership of 55,874 persons. Of these, 7,851 or 14.1 per cent were reported idle on the last day of the month, contrasted with a percentage of 15.4 in February. Steam railway employees, whose returns constituted over 81 per cent of the total membership reported in the group, were entirely responsible for this better situation shown from February, activity for navigation workers being considerably retarded and with teamsters and chauffeurs indicating but a nominal drop in the employment volume available. Among street and electric railway employees the same percentage of idleness was reported as in February. Conditions were somewhat less favourable in the transportation industries than in March, 1932, when 12.3 per cent of idleness was recorded, steam railway employees and navigation workers each contributing a share to this adverse employment movement. Teamsters and chauffeurs were more busily engaged than in March a year ago and the same situation prevailed for street and electric railway employees during both months reviewed.

The situation for retail clerks continued to improve during March and employment was at a high level, the 5 associations from which reports were tabulated, with a total of 1,063 members, showing 0.8 per cent of idleness, compared with 2.0 per cent in February. Employment was also more plentiful than in March, 1932, when 3.4 per cent of inactivity was recorded.

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

| Month     | Fishing | Lumbering and logging | Mining | Manufacturing industries | Vegetable products | Pulp and paper products | Pulp and paper mill workers | Printing, publishing and lithographing | Electric current | Wood products | Ribres, textiles and textile products | Garment workers | Hat, cap and glove workers | Animal products | Iron and its products | Non-ferrous metals | Clay, glass and stone products | Mineral products | Miscellaneous manufacturing industries | Building and construction | Transportation | Shipping and stevedoring | Steam railway operation | Local transportation | Communication | Telegraph operation | Telephone operation | Trade (retail shop clerks) | Services | Governmental | Miscellaneous | All occupations |      |      |
|-----------|---------|-----------------------|--------|--------------------------|--------------------|-------------------------|-----------------------------|--|------------------|---------------|---------------------------------------|-----------------|----------------------------|-----------------|-----------------------|--------------------|--------------------------------|------------------|--|---------------------------|----------------|--------------------------|-------------------------|----------------------|---------------|---------------------|---------------------|----------------------------|----------|--------------|---------------|-----------------|------|------|
